The dates shown in this calendar are subject to change at any time by official action of Cornell University
In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.
The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.
The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Comell University.
The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time

Volume 86 of the series "Cornell University" consists of nine catalogs, of which this is number six, dated August 1, 1994. Issued twice in February, once in May, once in June, once in July, three times in August, and once in November. Published by Media Services, Comell University, Comstock Hall, Ithaca, NY 14853-0901. Secondclass postage paid at Ithaca, New York.
Postmaster: Send address changes to Cornell University,
Vice President for Student and Academic Services, 311 Day
Hall, Ithaca, NY 14853-2801.

## Cornell University Executive Officers

Frank H. T. Rhodes, president
Malden C. Nesheim, provost
Robert Michels, provost for medical affairs
James E. Morley. Jr., senior vice president
Joyce W. Cima, acting secretary of the corporation
Harold D. Craft, Jr., vice president for facilities and campus services
Henrik N. Dullea. vice president for university relations
Joycelyn R. Hart, associate vice president for human relations
Michael G. Kimberly, acting university counsel
H. David Lambert, acting vice president for information technologies

Susan H. Murphy, vice president for student and academic services
Richard M. Ramin, vice president for public affairs
Frederick A. Rogers. vice president for finance and treasurer
Norman R. Scott, vice president for research and advanced studies
John R. Wiesenfeld, vice president for academic programs and planning

> It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell's Title IX coordinator (coordinator of women's services) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York $14853-2801$ (telephone: $607255-3976$ ).
> Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York $14853-2801$. Other questions or requests for special assistance may also be directed to that office.

## CORNELL UNIVERSITY—GENERAL INFORMATION

## Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. A student handbook describing life at Cornell will be distributed to all new incoming students. In addition, each new student receives the Policy Notebook, which summarizes pertinent university policy. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements.
Student responsibility and regulations. The Campus Code of Conduct describes the regulations and policies for maintaining public order on campus. The Code of Academic Integrity and other statements of student responsibility are set forth in the Policy Notebook. Publications are available for viewing on CUINFO, the university's electronic information system, and in print at the various university libraries, the Student Life Union, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.
The following is a list of offices and information sources for admission information:
Undengraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, New York 14850-9988 (telephone: 607/255-5241).
Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School, 100 Sage Graduate Center, Ithaca, New York 14853-6201 (telephone: 607/255-4884)
Law School. Admission information for the Law School is available from the Law School, Myron Taylor Hall, Ithaca, New York 148534901 (telephone: 607/255-5141).
Samuel Curtis Johnson Graduate Scbool of Management. Information is available from the Office of Admissions, 315 Malott Hall, Ithaca, New York 14853-4201 (telephone: 607/255-2327).
College of Velerinary Medicine. Admission information is available from the Admissions Office, Schurman Hall, Cornell University, Ithaca, New York 14853-6401 (telephone: 607/253-3000).
Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, New York 10021 (telephone: 212/746-1067).

## CUINFO/GOPHER

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the Course and Time Roster and the Course and Room Roster, each issued twice a year by the Office of the University Registrar. You may access CUINFO using either telnet or gopher. Telnet to port 300 on host gopher2.cit.cornell.edu. To use gopher, connect to gopher.cit.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

## EXPLANATION OF COURSE NUMBERING SYSTEMS

## The course levels have been assigned as

 follows:100-level course-introductory course, no prerequisites, open to all qualified students
200-level course-lower-division course, open to freshmen and sophomores, may have prerequisites
300 -level course-upper-division course, open to juniors and seniors, prerequisites
400-level course-upper-division course, open to seniors and graduate students, 200- and 300 -level course prerequisites or equivalent
500-level course-professional level (e.g., management, law, veterinary medicine)
600-level course-graduate-level course, open to upper-division students
700 -level course-graduate-level course
800-level course-master's level, thesis, research
900 -level course-doctoral level, thesis, research
The list of courses that follows is arranged in two broad groups.
Group 1: Divisions that offer both under-graduate- and graduate-level courses
Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences
Biological Sciences
Engineering
Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutritional Sciences
Officer Education
Group 2: Graduate professional divisions
Law
Management
Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.
Within each division, courses are generally arranged in alphaletical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

## ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. Requests to review documentation supporting its accreditation should be addressed to the Vice President for Academic Programs and Planning, Cornell University, 433 Day Hall, Ithaca, New York 14853-2801.

## Advanced Placement

## CREDIT FOR ADVANCED PLACEMENT

1. Definition and Purpose of Advanced Placement Credit
Advanced placement credit is college credit that students eam before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.
2. Advanced placement credit may be earned from one of the following:
a. Achieving the requisite score on a departmental examination at Cornell (usually given during Orientation Week) or from the Advanced Placement Examinations from the College Board Admissions Testing Program (ATP). The requisite scores which vary by subject, are determined by the relevant departments at Comell, and are published elsewhere in the Courses of Study.
b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept

> credit from virtually all accredited colleges; some do not.

Credit for international credentials is evaluated individually.
Advanced placement credit is established by each department and administered by each college.
Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, take the appropriate Advanced Placement Examination offered by the College Board Admissions Testing Program in Princeton, New Jersey, to qualify for credit as in paragraph $2 a$ above.
This statement was agreed upon by members of the Committee on Academic Records and Registration, 30, November 1990.
The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. This recommendation is almost always based on some examination score. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.
The Advanced Placement (AP) Program of the College Entrance Examination Board (CEEB) is the best known and most generally used of the programs that provide students with an opportunity to document participation in a college-level curriculum at the secondary level.

## Advanced placement examinations.

Examinations sponsored by the Advanced Placement Program of the College Entrance Examination Board are considered. Entering freshmen should have their scores sent to their college or school office (see the list at the end of this section). Placement and credit on the basis of these examinations will usually be determined during the summer, and students will be notified before course scheduling.
Departmental advanced standing exami-
nations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of CEEB Advanced Placement Examinations or departmental examinations are shown below.
Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies
according to each college's or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.
Foreign credentials. Information regarding Cornell's advanced standing policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850-2488, U.S.A. Students holding foreign credentials who feel they may be eligible for advanced standing consideration should contact the International Students and Scholars Office before enrollment for clarification of the advanced standing policy.
Written inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

## Forwarding of scores and transcripts.

Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.
College of Agriculture and Life Sciences 177 Roberts Hall
College of Architecture, Art, and Planning B2 West Sibley Hall
College of Arts and Sciences
M46 Goldwin Smith Hall
College of Engineering
170 Olin Hall
School of Hotel Administration 138 Statler Hall
College of Human Ecology
N101 Van Rensselaer Hall
Scbool of Industrial and Labor Relations 101 Ives Hall

## BIOLOGICAL SCIENCES

The Division of Biological Sciences grants advanced placement credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology.
Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses.
Students not majoring in biological sciences who score a 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology, half of the distribution requirement in biological sciences for students in the College of Arts and Sciences through the Class of 1995, and a portion of the group $B$ distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences in the class of 1996 and beyond, credits may be applied to the Group 1 distribution area in accordance with regulations stipulated by the college.
Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by
taking Biological Sciences 101-102, 101/103, $102 / 104$, or $103-104$ or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the course office ( 1140 Comstock Hall) and in the Biology Center ( 216 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

## CHEMISTRY

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207-208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215-216, a nine-credit sequence that includes qualitative and quantitative analysis.
Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand with Mrs. Virginia Marcus, in 158 Baker Laboratory.
The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215-216 and should consult the Chemistry 215 instructor.

## CLASSICS

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, Comell University, 120 Goldwin Smith Hall.
Latin. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300 -level course will be given six advanced placement credits.
Greek and Modern Greek. Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300 -level course will be given six advanced placement credits. For Modern Greek, a student who is determined by the examiner to be at an advanced level will be given six advanced placement credits.

## COMPUTER SCIENCE

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211,212 , or 222 (provided, in the case of Computer Science 222, the mathematics

## Summary of Credit and Placement

| Subject | Score | Advanced Placement Credit | Placement |
| :---: | :---: | :---: | :---: |
| Arabic | Department of Near Eastern Studies determines credit and placement based on departmental examination. |  |  |
| Biology | 5 (majors) | 8 credits or 4 credits | Placement out of all introductory courses. Students may choose to accept only 4 credits and follow the guidelines for majors with a score of 4. |
|  | 4 (majors) | 4 credits | 4 AP credits awarded after completion of any combination of 4 credits from 101-104 or 105 or 106. Consult department to determine which semester to take to complete introductory biology. |
|  | 5 (nonmajors) | 8 credits | Placement out of all introductory courses. |
|  | 4 (nonmajors) | 6 credits | Placement out of 109-110. Does not always satisfy the prerequisite for second- and third-level courses in biology. |
| Chemistry $\ddagger$ | 5 | 4 credits | Department determines placement. |
| Computer science | 4,5 | 4 credits | Placement out of C.S. 100. |
| Economics | 4,5 | 3 credits | 3 credits each for micro and macro; 6 credits maximum. |
| English | 4,5 | 3 credits |  |
| French language | 4,5 | 3 credits | Department of Modern Languages and Linguistics determines placement. Students may earn additional credit by taking CASE examination. $\dagger$ |
| French literature | 4,5 | 3 credits (and proficiency) | Department of Romance Studies determines placement. |

tCornell Advanced Standing Examination. Contact the Department of Modern Languages and Linguistics, 203 Morrill Hall.
$\ddagger$ In the College of Arts and Sciences, AP credit may be used to satisfy half the distribution requirement in science.
prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences.
Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200 -level course without receiving credit for Computer Science 100. These students are strongly urged to take the departmental placement test. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

## ECONOMICS

Students with a strong background in introductory economics may, with the consent of the instructor, register for intermediate courses without taking Economics 101-102.

## ENGLISH

The English department will grant 3 credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. The credits are granted automatically: no application to the department is required
Students who receive scores of 700 or better on the CEEB College Placement Test in English composition, 700 or better on the CEEB College Placement Test in literature, or 4 or 5 on the CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the following English freshman writing seminars: $270,271,272$.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

## GERMAN LITERATURE

The Department of German Studies will grant three credits to students with a score of 3 or better on the Advanced Placement Examination

For information about the College Placement Test, see "Modem Languages," below

## HISTORY

The Department of History will grant four credits to students who score 4 or 5 on the CEEB Advanced Placement Examination in European history and four credits to those with such scores in the American history examination. Such credits are granted automatically, without application to the department.
These credits may not be used to fulfill requirements of the history major or distribution requirements of the College of Arts and Sciences.

## HISTORY OF ART

The Department of History of Art will grant three credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. Such credits are granted automatically, without application to the deparment.
These credits may not be used to fulfill requirements of the history of art major or distribution requirements of the College of Arts and Sciences

## MATHEMATICS

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog

The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC ) during their senior year.

The following rules do not apply to students being admitted to the College of Engineering See the college's brochure for a detailed statement

Students with a grade of 4 or 5 on the BC examination may take the appropriate thirdsemester course (Mathematics 213, 221, or 293), but students entering Mathematics 293 may have to make up some material on partial differentiation. Students with a 3 on the $B C$ examination or a 4 or 5 on the AB examination may take the appropriate secondsemester course (Mathematics 112,122 , or 192). Students with a 2 on the BC examination or a 3 on the AB examination may take one of the second-semester courses (Mathematics 112 or 192). Advanced placement credit will be awarded appropriately however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in mathematics for students in the College of Arts and Sciences.

Note, however, that the grade of 3 is not sufficient for a full year of advanced placement credit in mathematics

The placement examination in mathematics is offered at Comell only during orientation week and should be taken by students who

1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;
2) have received a 2 on the $B C$ examination or a 3 on the AB examination and want to enter the upper sequence; or
3) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part
of a student's record. No advance registration for the departmental examination is necessary.

## MODERN LANGUAGES

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. In cases where no placement test exists for a particular language, the Department of Modern Languages and Linguistics designates a professor to handle placement for that language. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work

Advanced standing credit may be entered on a student's record as follows

1) For students with a score of 4 or 5 on the language Advanced Placement Examination, three credits are granted, and they are eligible to take Comell's Advanced Standing Examination (CASE). Outstanding performance on this examination could provide three additional credits.
1a) Students who achieve a minimum score of 650 on the language placement test are eligible to take Cornell's Advanced Standing Examination (CASE). Oustanding performance on this examination could provide a maximum of six credits.
2) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Comell record.
3) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.
Information about times and places to take placement tests is available in the orientation booklet, from Academic and Career Counseling Services, and from the Department of Modern Languages and Linguistics. For more information, see the College of Arts and Sciences section on language course placement, or contact the Department of Modem Languages and Linguistics, Cornell University, 203 Morrill Hall.

## MUSIC

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor E. Murray, 311 Lincoln Hall (telephone: 607/255-4675). Inquiries may be directed to the Department of Music, Comell University, 104 Lincoln Hall (telephone: 607/255-4097).

## NEAR EASTERN STUDIES

For advanced placement and credit in Arabic and Hebrew, students should consult the Department of Near Eastern Studies, 360 Rockefeller Hall. All advanced placement and credit are determined by departmental examination.

## PHYSICS

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the deparmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult Professor R. Cotts, 522 Clark Hall.
Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 and 102. Those earning a score of 5 in physics $B$ with a score of 4 or 5 in calculus BC or a score of 5 in calculus AB may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

## Physics C.

1) C-Mechanics Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207 , or for placement into Physics 116 with no AP credit.
2) C-Electricity and Magnetism Students earning a score of 5 may choose four credits for Physics 213, or placement into Physics 217 with no AP credit. A student planning a major in Physics or Applied and Engineering Physics and who is eligible for credit under 1) or 2) above may consult with his/her adviser or the department representative.
Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.
General information and advice may be obtained from Professor R. Cotts, 522 Clark
Hall, or from the Department of Physics,
Comell University, 109 Clark Hall.

## PSYCHOLOGY

Students who scored 4 or 5 on the CEEB College-Level Examination Program psychology test may receive three advanced placement credits in psychology. Those interested in taking further courses in psychology should consult a faculty member in the Department of Psychology, Cornell University, 226 Uris Hall.
Advanced placement based on the CEEB test may not be used to satisfy the distribution requirement in the College of Arts and Sciences. Credit toward the requirements of a major in psychology will depend on the recommendation of the student's major adviser.

## ROMANCE STUDIES (FRENCH, ITALIAN, AND SPANISH LITERATURE)

The Department of Romance Studies grants three credits to students with a score of 4 or 5 on the Advanced Placement Examination in French, Italian, or Spanish literature.
For information about the Placement Test in languages, see "Modern Languages," above.

## ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS

Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement examinations of the College Board or for the departmental examinations offered during Orientation week. Students requiring further information concerning advanced standing credit for foreign credentials may contact the Associate Director, Undergraduate International Admissions.

## General Certificate of Education (GCE)

Advanced ("A") Level Examination passes are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to the Associate Director, International Admissions, in order to receive credit. The following overseas examinations are recognized by Cornell as equivalent in standard to GCE "A" Levels:

- Matriculation examination of the University of Hong Kong (Advanced Level)
- Advanced Level examination of the University of Hong Kong
- E. African Advanced Certificate of Education (principal passes only)
- W. African Advanced Level General Certificate of Education
- Joint examination for the Higher School Certificate and Advanced Level General Certificate of Education in Malaysia and Singapore (principal passes only)
Following is a list of subjects and the marks for which credit will be awarded:

| Subject | Marks | Credit |
| :---: | :---: | :---: |
| Biology | A or B | 8 credits |
| Chemistry | A | 8 credits (Chem 207 and 208) |
|  | B | 4 credits (Chem 207) |
| Economics | A | 6 credits (Econ 101 and 102) |
| English |  |  |
| Literature | A | 6 credits |
|  | B | 3 credits |
| Geography |  | subject to departmental review |
| History | $\begin{aligned} & \mathrm{A}, \mathrm{~B}, \\ & \text { or C } \end{aligned}$ | 4 credits |
| Mathematics | A or B | $\begin{aligned} & 8 \text { credits (Math } 111 \\ & \text { and 112) } \end{aligned}$ |
|  | C | 4 credits (Math 111) |
| Music |  | subject to departmental review |

## Philosophy A or B 3 credits

Physics A or B 4 credits for Physics 101,112 , or 207 4 additional credits for Physics 213 are granted for a combination of grades of A or $B$ and a minimum of 8 Advanced Placement (or Advanced Standing) credits in Mathematics. (Students planning to major in physics should consider enrolling in Physics 217.)

International Baccalaureate (IB) Higher
Level Examination passes are awarded advanced standing and credit as follows. The original or a certified copy of the examination results must be shown to the Associate Director, International Admissions.

| Subject <br> Anthropology | Marks | Credit |
| :---: | :---: | :---: |
|  |  | subject to departmental review |
| Biology | $\begin{aligned} & 7 \\ & 6 \end{aligned}$ | 8 credits <br> 6 credits |
| Chemistry | 7 5 or 6 | 8 credits (Chem 207 and 208) <br> 4 credits (Chem 207) |
| Economics | 6 or 7 | 6 credits |
| English |  |  |
| Literature | $\begin{aligned} & 7 \\ & 6 \end{aligned}$ | 6 credits <br> 3 credits |
| Geography |  | subject to departmental review |
| History |  | subject to departmental review |
| Mathematics | 6 or 7 | 8 credits (prospective math, science, and engineering majors must consult with math department to determine prerequisite for placement in thirdsemester math courses) |
| Music |  | subject to departmental review |
| Philosophy | 7 | 3 credits |
| Physical |  |  |
| Science | 6 or 7 | 4 credits (Phys 112 or 207) |
| Physics | 6 or 7 | 4 credits (Phys 112) |

For more information about advanced placement or other academic questions, please contact the Associate Director, International Admissions, Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488.

## University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide
services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.
The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.
To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.
Individuals must become registered students by the end of the third week of the semester.
Comell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

## COURSE ENROLLMENT

Pre-course enrollment for each semester at Comell takes place partway through the preceding semester. Dates are announced in advance and are usually posted in school and college offices. Each college or school notifies students about special procedures. Students are often expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree. Students complete a course enrollment form, then return the form to their college office. Each student is sent a course confirmation statement listing the courses processed from the enrollment form. Class schedules are distributed later by the college offices, often during the same days as university registration.
New students and transfer students are sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

Students who fail to submit a course enrollment form during the designated period may be charged a penalty fee. The fees are listed in the chart in the following section.

## COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. See the chart below for course add/drop/change fees. Professional schools and the physical education department have different add-drop policies.

## Late Course Enrollment and Late Add/ Drop/Change Fees

| Academic Unit E | Late <br> Course Enrollment Fee | Late Course Add/Drop/ Change Fee |
| :---: | :---: | :---: |
| College of Agriculture and Life Sciences | No fee | No fee |
| College of Architecture, Art, and Planning | No fee | No fee |
| College of Arts and Sciences | No fee | No fee |
| School of Continuing Education and Summer Sessions | $\dagger$ | f |
| College of Engineering | No fee | No fee |
| School of Hotel Administration | No fee | No fee |
| College of Human Ecology | No fee | No fee |
| School of Industrial and Labor Relations | No fre | No fee |
| Internal Transfer Division | No fee | No fee |
| Johnson Graduate School of Management | \$100 | \$100 |
| Law School | No fee | No fee |
| Physical education | \$30 | \$20* |
| Veterinary medicine | \$15 | \$15* |

*Consult the college office for special considerations and requirements.
tConsult the Summer Session catalog and the Division of Extramural Study brochure for fees.

## AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

## LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.
A student may withdraw from the university at the student's discretion. However, a college may withdraw a student who fails to return at the end of a period of authorized leave.
Medical leaves are granted and processed through University Health Services.

## Internal Transfer Division

Students may not always be satisfied with the original Comell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITI)). To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division. For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

475 (estimated)

## Other Tuition and Fees

In absentia fees

| Graduate | $\$ 200$ per term |
| :--- | ---: |
| Undergraduate | 15 per term |
| Law and Management | 75 per term |

The amount, time, and manner of payment of tuition, fees, or other cbarges may be changed at any time uithout notice.
*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

## Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $\$ 60$ application fee when submitting an application for admission. The graduate application fee is $\$ 60$. Application to the Johnson Graduate School of Management costs $\$ 85$ (domestic), $\$ 110$ (international).

## Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.
First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of
the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.
Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

## Refund Schedule for Withdrawals and Leaves of Absence <br> Fall 1994 and Spring 1995

## BILLING AND PAYMENT

## Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to ID validation day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.
It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.
All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student's application for admission.

## Payments

An individual who has outstanding indebtedness to the university will not be allowed to register or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.
The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. Since the Office of the Bursar does not bave detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.
For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336; fax: 607/255-6442).
*For specific exceptions, see "Bursar and Cornellcard Procedures," published by the Office of the Bursar, 260 Day Hall.

## STUDENT HEALTH INSURANCE

It is a Cornell University policy, by a university board of trustees decision, that all full-time students have health insurance coverage while enrolled at Cornell.
The student health plan offers extensive coverage at a reasonable cost for students and their eligible dependents. Plan benefit information will be mailed to all registered students (including students registered in absentia) in their July bursar bill. If you decide that you have adequate coverage and want to waive the student health plan, a waiver form with proof of other coverage must be submitted to the student insurance office before the September 25 deadline. All full-time registered students, including students registered in absentia, will be automatically billed and enrolled in the student health plan if a completed waiver is not received by the deadline. After the deadline, the plan is nonrefundable, except for dependents who no longer meet eligibility requirements.
Students enrolled in the student health plan may also enroll their eligible dependents for an additional charge. Enrollment deadline is September 25.

A five-month graduate plan is available for those students who finish their degree requirements before the start of the spring semester. The deadline for application is prior to the start of the spring semester.
To obtain additional information about the Cornell University health plan, please contact the student insurance office at the Gannett Health Center, 10 Central Avenue, Ithaca, NY 14853 or (607) 255-6363.

## Class Attendance, Meeting Times, and Examinations

## CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.
Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

## Class Meeting Times

All lectures, recitations, and similar exercises start at 8 a.m., 9:05 a.m., 10:10 a.m., 11:15 a.m., 12:20 p.m., 1:25 p.m., 2:30 p.m., or 3:35 p.m. and last fifty minutes, except that on Tuesday and Thursday the first and second, the third and fourth, the fifth and sixth, and the seventh and eighth periods may be combined to allow for longer meeting times.

All laboratories and similar exercises that continue for 1 hour and 55 minutes, 2 hours and 25 minutes, or 3 hours are scheduled as shown below.

Schedule for Classes Longer than Fifty Minutes 1 bour and 55 minutes
8:00 a.m.-9:55 a.m.
10:10 a.m.-12:05 p.m.
12:20 p.m.-2:15 p.m.
2:30 p.m. $-4: 25$ p.m.
7:30 p.m. $-9: 25$ p.m.
2 bours and 25 minutes
7:30 a.m.-9:55 a.m.
10:10 a.m.-12:35 p.m.
2:00 p.m. $-4: 25$ p.m.
7:30 p.m. $-9: 55$ p.m.
3 bours
8:00 a.m.-11:00 a.m.
10:10 a.m.-1:10 p.m
1:25 p.m. $-4: 25$ p.m.
7:30 p.m.-10:30 p.m.
On Monday, Tuesday, Wednesday, and Thursday the hours of $4: 25$ to $7: 30 \mathrm{p} . \mathrm{m}$.; on Friday the hours after 4:25 p.m; on Saturday the hours after $12: 05 \mathrm{p} \mathrm{m}$.; and all day Sunday are free from all formal undergraduate class or laboratory exercises.
Review sessions cannot be scheduled after 4:30 p.m. on any day unless all students have no university conflict or an alternate session is made available for those with conflicts.
Evening classes are held only on Monday and Wednesday and only when regularly
scheduled and included in written college announcements or when recommended by the Committee on Academic Records and Registration. Evening lectures, recitations, and similar exercises start at 7:30 and 8:35 p.m. evening laboratories and similar exercises start at 7.30 p.m.
Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theattrical,
employment, etc.)
Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the Course and Room Roster for each term.
Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

## FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar twice per year. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

## General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the
time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

## The university policies governing study period and final examinations are:

a) Each course shoukd require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.
b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.
c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

## EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.
An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.
Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses
of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

## Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from $\mathrm{A}+$ to $D-F$ is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course The grades of INC and R do not have qualitypoint equivalents attached. These are the quality-point equivalents:

| $\mathrm{A}+=4.3$ | $\mathrm{~B}+=3.3$ | $\mathrm{C}+=2.3$ | $\mathrm{D}+=1.3$ |
| :--- | :--- | :--- | :--- |
| $\mathrm{~A}=4.0$ | $\mathrm{~B}=3.0$ | $\mathrm{C}=2.0$ | $\mathrm{D}=1.0$ |
| $\mathrm{~A}-=3.7$ | $\mathrm{~B}-=2.7$ | $\mathrm{C}-=1.7$ | $\mathrm{D}-=0.7$ |
|  | $\mathrm{~F}=0.0$ |  |  |

This is how a term average is computed: Quality

| Course | Grade | Points | Credits | Product |
| :--- | :---: | :---: | :---: | :---: |
| Chemistry 103 | B+ | 3.3 | 3 | 9.9 |
| English 151 | C- | 1.7 | 3 | 5.1 |
| DEA 145 | B | 3.0 | x | $4=$ |
| CEH 100 | B | 3.0 | 3 | 9.0 |
| DEA 111 | C | 2.0 | 3 | 6.0 |
| Total |  |  | 16 | 42.0 |

To arrive at the term average, add the products (credits $x$ quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

## S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation

## "Resolved, that

A. the S-U system have symbol equivalents which are uniform within the university: " S " means C - or above; " U " means $\mathrm{D}+, \mathrm{D}$, D-, or failure
B. S-U options be chosen by the student during the first three weeks of the term.
C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.
D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."
The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.
Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as $S$ or U , the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.
Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hrs . required for the A.B. degree must be in courses for which the student has received letter grades

Engineering, (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision is irrevocable after first 3 weeks of term.
Graduate Scbool. (a) Seminars and Thesis Research courses are usually graded $\mathrm{S} / \mathrm{U}$, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.
Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.
Human Ecology. (a) Not part of student's major. (b) May be used in the 15 hours required outside the major in Human Ecology courses. (c) Not part of 39 hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Only juniors and seniors may take courses in which both letter grades and S-U are options. (f) Sophomores may take courses in which S-U is offered but letter grades are not offered. (g) Freshmen enrolled in English 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (h) Total of four S-U courses during student's college career.
Industrial and Labor Relations. (a) This option may be elected, if available in I\&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A + to D - ) credits. (c) Student must also be in good academic standing. (d) A " U " is considered the equivalent of an " $F$ " in determining a student's academic status (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.
Veterinary Medicine. (a) There are four courses in the veterinary core curriculum that are offered on an S-U hasis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on a $\mathrm{S} / \mathrm{U}$ basis at the option of the professor.

## INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.
A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.
While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.
It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

## CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

## OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official seal of the university and the signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the office of the university registrar, 222 Day Hall.

## University Requirements for Graduation

The university has only one requirement (physical education) which must be fulfilled. A student's college determines degree
requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

## PHYSICAL EDUCATION

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Comell.
Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.
Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.
Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

## Swim Test

All undergraduate freshmen who do not pass a basic 75 -yard swim test are required to include swimming in their program of physical education unless they are excused by Gannett Health Center. All nonswimmers are required to register in beginning swim classes. Completion of two semesters of beginning swimming will satisfy the swimming requirement.

## STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

## Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell

University is required to advise students of their rights concerning their education records Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to
a) inspect and review their education records;
b) challenge contents of education records;
c) a hearing if the challenge is unsatisfactory;
d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
e) prevent disclosure of personally identifiable information*;
f) secure a copy of the institutional policy which includes the location of all education records**; and
g) file complaints with the Department of Education concerning institutional failure to comply with the act.
*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration each academic year. Students may rescind their no release request at any time in writing to the office of the university registrar.
**Opies of the "Cornell University Policy on Access to and Release of Student Education Records" are available at the office of the university registrar, 222 Day Hall.

## POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university's policy on student educational records, and the U.S. Department of Education's Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.
Accordingly, the following student information is considered restricted and therefore may not be posted:
Student social security number
Student identification number
Course elected
Grades eamed
Grade point average
Class rank
Date of birth
Place of birth
Home telephone listing
Academic and disciplinary actions
Student or administrative committees

The most recent student educational records from previous educational agency or institution
Financial arrangements between the student and the university
Any other education record containing personally identifiable information
For further information, please refer to the revised Policy on Access to and Release of Student Education Records from the office of the university registrar, 222 Day Hall, or from your college registrar.

## Academic Integrity

Absolute integrity is expected of every Comell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

## PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee's Executive Secretary, 117 Day Hall (255-5014). The guidelines are also available on CUINFO under OSP (Office of Sponsored Programs)

## USE OF ANIMALS FOR COURSES

The Cornell University Institutional Animal Care and Use Committee has made the following statement on the use of animals for courses: "In certain courses the use of vertebrate animals serves as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner Courses that use vertebrate animals are identified as such in course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is available from departments in which the courses are offered.

A student who is reluctant to voice his or her concerns about animal use in a particular course, or who thinks these concerns have not received proper attention, may seek assistance from the director of the Cornell Center for Research Animal Resources (253-3516)."

## Interdisciplinary Centers, Programs, and Studies

## ANDREW D. WHITE PROFESSORS-AT-LARGE

G4 Van Rensselaer Hall (255-0832).
The program has its origins in Comell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a sixyear term and are full members of the faculty when in residence

## Term Ending in 1995

Doniger, Wendy, historian of religions Kon, Igor S., sociologist and ethnologist Levine, Raphael D., chemical physicist Swaminathan, M. S., natural ecologist President, National Academy of Sciences, India

## Term Ending in 1996

Lloyd, Geoffrey E. R., Professor of Ancient Philosophy and Science and Master of Darwin College, Cambridge University
Myers, Norman, consultant scientist on conservation and management of tropical diversity
Rowlinson, John Shipley, chemical engineer

## Term Ending in 1997

Delano, Jack, artist and film maker
Kuspit, Donald, art critic
Nasr, Seyyed Hossein, Islamist

## Term Ending in 1998

Diaconis, Persi, mathematical statician Levertov, Denise, poet and critical writer

## Term Ending in 1999

Mitchell, Juliet, psychoanalyist and feminist theorist
Mosse, George, historian
Press, Frank, geophysicist, science and technology adviser
Seeger, Anthony, ethnomusicologist

## CENTER FOR APPLIED

 MATHEMATICS504 ETC Building Hall (255-4335)
The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of
the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 504 ETC Building.
There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.
Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

## Selected Applied Mathematics Courses

Basic Graduate Courses in Applled Mathematics (and Analysis)
Math 413-414 Introduction to Analysis
Math 433-434 Introduction to Algebra
Math 511-512 Real and Complex Analysis
Math 521 Measure Theory and Lebesgue Integration
Math 522 Applied Functional Analysis
Math 531-532 Algebra
Math 551 Introductory Algebraic Topology
Math 515-516 Mathematical Methods in Physics
T\&AM 612-613 Methods of Applied Mathematics
T\&AM 614-615 Topics in Applied Mathematics

## Analysis (and Differential Equations)

Math 427 Ordinary Differential Equations
Math 517 Dynamical Systems
Math 518 Smooth Ergodic Theory
Math 519-520 (also Math 428) Partial Differential Equations
Math 552 Differentiable Manifolds
Math 611-612 Seminar in Analysis
Math 613 Functional Analysis
Math 615 Fourier Analysis
Math 622 Riemann Surfaces
Math 623 Several Complex Variables
Math 627-628 Seminar in Partial Differential Equations

## Logic and Theory of Computing

CS 615 Theory of Concurrent Systems
CS 671 Introduction to Automated Reasoning
CS 682 Theory of Computing
CS 715 Seminar in Programming Refinement Logics
Math 486 Applied Logic I
Math 487 Applied Logic II
Math 581 Logic
Math 681-682 Seminar in Logic
Math 683 Model Theory
Math 684 Recursion Theory
Math 685 Metamathematics
Math 687 Set Theory
Math 688 Topics in Applied Logic

## Discrete and Numerical Mathematics

CS 422-522 Parallel Scientific Computing
CS 621 Matrix Computations

CS 622 Numerical Optimization and Nonlinear Algebraic Equations
CS 624 Numerical Methods for Differential Equations
CS 681 Analysis of Algorithms
CS 721-722 Advanced Topics in Numerical Analysis
CS 729 Seminar in Numerical Analysis
EE 543 VLSI Architectures and Algorithms
Math 425 Numerical Solution of Differential Equations
Math 627-628 Seminar in Partial Differential Equations
Math 655 (also CS 655) Mathematical Foundations for Computer Modeling and Simulation
OR\&IE 627 Dynamic Programming
OR\&IE 630-631 Mathematical Programming I and II
OR\&IE 632 Nonlinear Programming
OR\&IE 633 Graph Theory and Network Flows
OR\&IE 634 Combinatorial Optimization
OR\&IE 635 Interior-Point Methods for Mathematical Programming
OR\&IE 636 Integer Programming
OR\&IE 639 Polyhedral Convexity
Information Communication and Control Theory
EE 411 Random Signals in Communications and Signal Processing
EE 425 Digital Signal Processing
EE 468 Communication Theory
EE 521 Theory of Linear Systems
EE 522 Theory of Nonlinear Systems
EE 526 Advanced Signal Processing
EE 528 Multisensor Digital Signal Processing
EE 561 Error Control Codes
EE 562 Fundamental Information Theory
EE 563 Communication Networks
EE 564 Decision Making and Estimation
EE 565 Queueing Networks
EE 567 Digital Communication
EE 573 Optimal Control and Estimation for Continuous Systems
EE 574 Estimation and Control in Discrete Linear Systems
EE 577 Artificial Neural Networks

## Mathematical Biology

Bio S 662 Mathematical Ecology
Stat \& Biom 451 Mathematical Modeling of Populations
Stat \& Biom 651 Mathematical Population Studies and Modeling
Stat 697 \& Biom 760 Special Topics in Theoretical and Computational Biology

## Mathematical Economics

Econ 519 Econometrics I
Econ 520 Econometrics I
Econ 610 Stochastic Economics: Concepts and Techniques
Econ 617-618 Mathematical Economics Econ 619-620 Advanced Topics in Econometrics

## Mechanics and Dynamics

Chem E 731 Advanced Fluid Mechanics and Heat Transfer
Chem E 734 Fluid Mechanics in Suspensions
Chem E 751 Mathematical Methods of Chemical Engineering Analysis
Chem E 753 Analysis of Nonlinear Engineering Systems: Stability, Bifurcation, and Continuation
EE 681 (also A\&EP 761 ) Kinetic Theory
M\&AE 601 Foundations of Fluid Dynamics and Aerodynamics
M\&AE 602 Incompressible Aerodynamics
M\&AE 603 Compressible Aerodynamics

M\&AE 704
M\&AE 733 Stability of Fluid Flow
M\&AE 734 Turbulence and Turbulent Flow
M\&AE 736 Computational Aerodynamics
M\&AE 737 Computational Fluid Mechanics and Heat Transfer
T\&AM 570 Intermediate Dynamics
T\&AM 671 Advanced Dynamics
T\&AM 672 Celestial Mechanics (also Astro 579)

T\&AM 673 Mechanics of the Solar System (also Astro 571)
T\&AM 675 Nonlinear Vibrations
T\&AM 751 Continuum Mechanics and Thermodynamics
T\&AM 752 Nonlinear Elasticity
T\&AM 776 Applied Dynamical Systems

## Probability and Statistics

EE 562 Fundamental Information Theory
EE 563 Communication Networks
EE 564 Decision Making and Estimation
EE 566 Queuing Networks
EE 664 Foundations of Inference and Decision Making
Math 571-572 Probability Theory
Math 573 Experimental Design and Multivariate Analysis
Math 574 Probability and Statistics Math 575 Sequential Analysis, Multiple Decision Problems
Math 577 Nonparametric Statistics
Math 670 Topics in Statistics
Math 674 Multivariate Analysis
Math 675 Statistical Decision Theory
Math 677-678 Stochastic Processes
OR\&IE 561 Queuing Theory and Its Applications
OR\&IE 563 Applied Time-Series Analysis
OR\&IE 650 Applied Stochastic Processes
OR\&IE 651 Applied Probability
OR\&IE 662 Advanced Stochastic Processes
OR\&IE 663 Time-Series Analysis
OR\&IE 665 Advanced Queuing Theory
OR\&IE 670 Statistical Principles
OR\&IE 671 Intermediate Applied Statistics
OR\&IE 674 Design of Experiments
OR\&IE 675 Statistical Analysis of Discrete
Data
OR\&IE 676 Statistical Analysis of Life Data

## Robotics

CS 462 Robotics and Machine Vision
CS 661 Robotics
CS 662 Robotics Laboratory
CS 762 Robot Cafe
Theoretical/Mathematical Physics/Chemistry
Chem 792 Molecular Collision Theory
Chem 793 Quantum Mechanics I
Chem 794 Quantum Mechanics II
Chem 796 Statistical Mechanics
Chem 798 Special Topics in Physical

## Chemistry

EE 407 Quantum Mechanics and Applications
EE 412 Applied Solid State Physics
Phys 553-554 (Astro 509-510) General Relativity
Phys 572 Quantum Mechanics I
Phys 574 Quantum Mechanics II
Phys 561 Classical Electrodynamics
Phys 562 (Chem 796) Statistical Mechanics
Phys 563 Statistical Physics
Phys 651 Advanced Quantum Mechanics
Phys 652 Quantum Field Theory

## CENTER FOR THE ENVIRONMENT

## 200 Rice Hall (255-7535)

The Center for the Environment (CfE) is a campuswide center that promotes and coordinates interdisciplinary research, teaching, and outreach activities on environmental issues. The CfE historically includes several well-established programs, each headed by a program director and typically staffed by research and outreach professionals working with other Cornell faculty and staff in their respective programmatic disciplines. These institutionally based programs of the center include the following: (1) The Comell Laboratory for Environmental Applications of Remote Sensing (CLEARS) promotes, facilitates, and conducts research and extension programs in the areas of remote sensing, geographic information systems (GIS), and resource inventory; (2) the Cornell Waste Management Institute (CWMI) promotes interdisciplinary programs that integrate research and outreach on energy efficient, environmentally sound solid waste management; (3) the Institute for Comparative and Environmental Toxicology (ICET) provides a focus for training, education, and research in environmental toxicology; (4) the Water Resources Institute (WRI) promotes research and educational activities throughout New York State and provides technical and informational assistance to communities and other entities concerned with understanding and managing the state's water resources. The Center works with a variety of faculty and staff members to establish CfE programs that enhance the scope of programming possible from a single academic unit. These facultybased programs of the Center include the following: (1) The Cornell Institute for Research in Chemical Ecology (CIRCE) explores chemical interactions of organisms; (2) the Comell Program in Environmental Sciences for Educators and Youth (ESEY) helps young people and their teachers and leaders develop the ability to critically analyze environmental and resource management issues; (3) the Ocean Resources and Ecosystems Program promotes ocean studies on campus in the most effective ways possible at a university by developing marine research programs of the highest quality; (4) the Earth, Atmosphere, and Aquatic Sciences Program provides coordination for teaching and research activities in the earth, atmospheric, and aquatic sciences across departmental and college boundaries; (5) the Program for Climate Change Research provides a forum for researchers at Cornell through seminars, conferences, and information on sponsored research; (6) the Urban Environment and Poverty Program (UEP) promotes interdisciplinary work on the interaction of poverty and environmental degradation in Third World cities, where the immediate effects of environmental problems are most acutely felt: (7) the Work and Environment Initiative whose goal is to examine new ways to improve environmental performance at work and to increase green employment opportunities.

## Courses

The center is committed to educating the wide variety of undergraduate and graduate students needed to solve today's and tomorrow's environmental problems. CfE helps foster the development of environmentally oriented courses from many departments
and sections. For example, during the last year CfE has helped to sponsor CRP 653Legal Aspects of Land Use Planning ( 3 cr .), R. Booth and H. Carter; CRP 663 -Historic Preservation Law ( 3 cr ), H. Carter, NTRES 101-The Environment ( 2 or 3 cr .),
R. Oglesby; NTRES 494 Land and Culture: Systems of Native American Resource Management (Indians and the Environment) (3 cr.), S. Pennigroth; NTRES/CRP 494Conflict Resolution and Environmental Mediation, B. Wilkins. The center also helps build curricula in environmental sciences that transcend departmental boundaries, such as the Master of Environmental Management (MEM) degree program, which will be admitting students in the fall of 1994. The MEM will offer specialized tracks-biological, physical, or policy aspects of environmental sciences-and cross-disciplinary experiences that are rigorous and scientifically based, attractive to students from diverse disciplines, and relevant to "real-work" environmental problems that demand interdisciplinary approaches to their solutions. Cornell juniors will apply to the program and begin preparation for this one-year Master of Professional Studies degree during their senior year.
Courses related to CfE programs are offered in a number of departments; for example (1) ecosystems science through the Section of Ecology and Systematics and the Department of Natural Resources; (2) remote sensing through the departments of Civil and Environmental Engineering and Soil, Crop, and Aumospheric Sciences; (3) water resources primarily through the department of Agricultural and Biological Engineering; (4) waste management primarily through the departments of Environmental Engineering, Agricultural and Biological Engineering, and Agricultural, Resource, and Managerial Economics; (5) environmental policy through Toxicology, Natural Resources, and City and Regional Planning; (6) and biological resources through the Division of Biological Sciences

Material relevant to global environmental issues is covered by courses in several departments, including Environmental Engineering, Mechanical and Aerospace Engineering, Agricultural Engineering, Geology, Natural Resources, Rural Sociology, Agricultural, Resource, and Managerial Economics, and the Section of Ecology and Systematics

Because courses relating to the environment are not indexed by that title, interested students should check listings under the following sections of the catalog in addition to the departments mentioned above: Communication, Education, Entomology, Food Science, International Agriculture, Biology and Society, Chemistry, Economics, Government, History, Physics, and Science and Technology Studies. A brochure listing undergraduate environmental course offerings is available from the Center

## THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)
The Mario Einaudi Center for International Studies was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international
subjects and was named for its founder in 1991. It is one of the largest and most diverse centers in the United States. Currently it oversees five Title VI National Resource Centers (Africa, Latin American Studies, South Asia, Southeast Asia, and Western Societies), as well as sixteen topical programs and the university study-abroad program. More than 500 faculty members voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs. Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.
Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, ability to teach forty-five languages, and a library system with more than $2,500,000$ volumes on topics related to international and comparative studies.
As the world changes, Cornell's international programs change to study those developments. In addition to area studies, these programs focus on topics as varied and vital as international marketing, agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. These areas and topics change as interest, demand, and potential warrant. As one program gains enough momentum and recognition to attract its own resources, the center applies its resources to another pilot activity that brings faculty and students together across customary professional and departmental boundaries.
In addition, the Einaudi Center was recently given responsibility by the university to redesign and expand foreign study options for Cornellians, which has resulted in our Cornell Abroad Program. The center also encourages international research and travel by students through its annual Travel Grant Program.
Although the center has both an endowment and an appropriation from the university to support interdisciplinary international studies, Cornell monies are only a fraction of the total funds involved in international studies at Cornell. Programs seek funding from foundations, the federal government, alumni, and international agencies, a process that the center assists with as necessary. When particular programs are in a low budget cycle, rather than allowing them to lapse, the center continues to support those that show promise to keep the voluntary faculty groups operating together until new outside funding can be acquired. The center is also responsible for the International Students and Scholars Office.
For additional information on current programs, publications, and courses, contact

International Students and Scholars:
Jerry Wilcox, director
200 Barnes Hall

## COGNITIVE STUDIES

273A Uris Hall (255-6431) (cogstocornell.edu)
Cognitive studies is a new and rapidly growing field of study that focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspec-tives-theoretical, experimental, and computational-with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies has drawn primarily from the disciplines of computer science, linguistics, philosophy, and psychology. In the College of Arts and Sciences the field of cognitive studies is primarily represented by faculty in these departments, as well as in mathematics. It is also represented by faculty in the Department of Human Development and Family Studies (College of Human Ecology), in the Section of Neurobiology and Behavior (Division of Biological Sciences), in the Department of Education (College of Agriculture and Life Sciences), and in the Johnson Graduate School of Management.

## Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Sue Wurster: 255-6431 or cogsiocomell.edu.

## Graduate Programs

At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each student, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such departments as Philosophy, Computer Science, Modern Languages and Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Barbara Lust, graduate field representative, NG28 Van Rensselaer Hall (telephone: 607/255-0829), or

273A Uris Hall, Office of Cognitive Studies, 255-6431, cogst@cornell.edu.

## Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

## CORNELL ABROAD

474 Uris Hall 607/255-6224, fax 607/255-8700, e-mail: CUAbroad@cornell.edu
Cornell Abroad offers undergraduates a wide variety of academic programs that are intellectually challenging, academically and socially diverse, and culturally enriching. Study abroad is an integral part of a Cornell undergraduate education, complementing and enhancing study in Ithaca. Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. There are hundreds of study abroad programs available; students select programs and apply with the approval of their colleges and faculty advisors. In all cases, students enroll through Cornell Abroad.

## LOCATIONS ABROAD

Cornell undergraduates regularly study in approximately 40 different countries the world over. In addition to a challenging course of study, study abroad offers the experience of immersion in the life and culture of the host country.
Cornell students frequently choose to study at the following universities and programs:
AFRICA
Botswana, Cameroon, Kenya: School for International Training;
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
Kenya: East Africa Program (Friends World Program); Kenya Semester Program (St. Lawrence University);
Nigeria: University of Ibadan (Brown University)
ASIA
China: Peking and Nanjing Universities through CIEE;
Hong Kong: Chinese University of Hong Kong;
Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: Kyoto Center for Japanese Studies through a Stanford University-led consortium, and various other university programs;
Korea: Yonsei University;
Nepal: Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
Sri Lanka: ISI.E Program (Intercollegiate Sri Lanka Education);
Vietnam: University of Hanoi (CIEE)

## AUSTRALIA

Australia National University, Canberra; Curtin University of Technology, Perth; Griffith University, Brisbane; University of Sydney; University of Adelaide; University of New South Wales, Sydney; University of New England, Armidale; The University of Wollongong; University of Western Australia, Perth; School for International Training.

## EUROPE

Denmark: Denmark's International Study Program (DiS);
France: EDUCO (Comell and Duke in Paris) at Université de Paris VII, Paris I, Institut d'Études Politiques de Paris (Sciences Po); Critical Students Program at the University of Paris (CIEE);
Germany: Cornell program at the University of Hamburg; spring engineering semester at the Technical University of Hamburg, Harburg;
Greece: Cornell program at the Athens Centre;
Hungary: Budapest University of Economic Sciences (CIEE), Technical University of Budapest (Seminars in Mathematics);
Ireland: University of Limerick; Trinity College, Dublin;
Italy: Bologna Cooperative Studies Program; Cornell College of Art, Architecture and Planning Program in Rome; Intercollegiate Center for Classical Studies in Rome;
Russia: Cornell-Colgate Semester in Moscow; St. Petersburg University (CIEE);
Spain: Cornell-Michigan-Penn program at the University of Seville;
Sweden: Agricultural College of Sweden, Uppsala; The Swedish Program at the University of Stockholm;
Switzerland: Cornell program at the University of Geneva and affiliated institutes;
United Kingdom: University of Birmingham; University of Bristol; Cambridge University; University of Edinburgh; University of Manchester; Oxford University; University of Reading; University of Sussex; Lniversity of Warwick; University of London: King's College, University College, Imperial College of Science and Technology, and the London School of Economics and Political Science, Queen Mary Westfield College, School of Oriental and African Studies, School of Slavonic and East European Studies.

## LATIN AMERICA, CENTRAL AMERICA, AND

 THE CARIBBEANCosta Rica: School for Field Study;
Ecuador and Jamaica: Partnership for Service Learning;
Honduras: Escuela Agricola Panamericana (Zamorano);
Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey; Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana;

## MIDDLE EAST

Egypt: American University in Cairo;
Israel: Bar Ilan University; Ben-Gurion University; Development Study Center, Rehovot; Haifa University; Hebrew University of Jerusalem; Technion (Israel Institute of Technology); Tel Aviv University;
Morocco: School for International Training

## Other Locations

Cornell students are not limited to the locations listed above. In recent years, they have also studied in Argentina, Austria, Brazil, Colombia, Czech Republic, Dominican Republic, India, New Zealand, the Philippines, Poland, Puerto Rico, Turkey, Venezuela, and elsewhere.

## Who Studies Abroad

Students from all seven undergraduate colleges and from all major fields are eligible to study abroad; a cumulative grade point average of 30 or above is required. Approximately 500 undergraduates study abroad each year. Because the colleges usually require that students complete at least sixty hours of undergraduate credit on the Ithaca campus, students who transfer to Comell as juniors generally cannot count student abroad credit toward their Comell degree.

## When Students Study Abroad and for How Long

Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

## Application Process

Applications for all study abroad programsCornell programs, as well as those administered externally by other institutions in this country and abroad-are available in the Cornell Abroad Office, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials and to ask preliminary questions of the staff. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a one-page written statement of purpose outlining goals for study abroad and the academic program that will be followed. Applications are signed by both college study abroad and faculty advisers and are returned to the Comell Abroad office, with the exception of Human Ecology and Industrial and Labor Relations students whose applications are submitted to their college for forwarding to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to external programs as necessary. All students who wish to receive academic credit for study abroad must apply through Cornell Abroad.
The deadline for all applications to study abroad in the spring 1995 semester is October 15, 1994; to study abroad in the fall 1995 semester and/or the 1995-96 academic year, the deadline is February 15,1995 . Note that to
study at Oxford and Cambridge for the full 1995-96 academic year, the deadline is November 1, 1994 and that for all other British universities, students should inquire at Cornell Abroad.
Externally sponsored programs announce application deadlines at varying dates; students are advised to apply as early as possible. Some programs admit students on a rolling basis from very early in the semester.

## Registration, Credit Transfer, and Grades

Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell while they study abroad. They remain eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the foreign institution and normally receive 30 credits per year or $12-20$ credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the credits earned, and the grades received. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

## Foreign Language Requirements

Study abroad programs in non-English speaking countries that offer direct enrollment in universities generally require at least two years or the equivalent of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language programs are increasingly available in non-English-speaking countries-for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Whenever Cornell students study in a non-English-speaking country in an Englishlanguage program, they are required to take at least one language course as part of their course of study.

## Housing Arranagements

Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in apartments Comell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

## Costs

Students pay the tuition of the study abroad program and a fee to Comell, which will be $\$ 1,890$ in 1994-95. Students studying in the United Kingdom pay an additional semester fee of $\$ 300$ for services of the Cornell Centre, unless they are attending a program sponsored in the U.K. by another American university. Detailed information on costs is available at the Comell Abroad office.

## Financial Aid

All students going abroad, whether through a Cornell program or a program sponsored by another institution, are eligible for financial aid as consistent with general university policy.

## Security Abroad and Related Issues

The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Comell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Comell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstance and have tuition refund policies that contain a prorated formula.

## Sources of Information and Advice Concerning Study Abroad

Cornell Abroad (474 Uris Hall):
Urbain J. DeWinter, adjunct associate professor of romance languages, director; Beatrice B. Szekely Ph.D., associate director; Elizabeth R. Okihiro, Student Services; Kathy Lynch, accounts coordinator; Rae Ann Peterson-Mathewson, secretary/receptionist. The Comell Abroad library contains an extensive collection of university catalogs, study abroad program brochures, course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings that is announced in the Comel! Daily Sun.

## College Study Abroad Advisers

Agriculture and Life Sciences: Dr. Donald Burgett, director, Student Services, 140 Roberts Hall; Architecture, Art, and Planning: Phyllis Thibodeau, executive assistant (Rome Program), 129 Sibley; Arts and Sciences: Dr. Barbara Jo Lantz, assistant dean, International Programs, 55 Goldwin Smith Hall; Engineering: Professor Richard Lance, 322 Thurston Hall; Hotel Administration: Professor Russell Bell, 545C Statler Hall; Human Ecology: Dr. Mary Rhodes, registrar, N101 Martha Van Rensselaer; Industrial and Labor Relations: Laura Lewis, student development specialist, 101 Ives Hall.

## CORNELL-IN-WASHINGTON PROGRAM

## 131 Sage Hall (255-4090)

Cornell-in-Washington is a university-wide program that offers students from all colleges within the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. The Comell-in-Washington Program offers two study options: 1) studies in public policy; and 2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.
The program is housed at the Comell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and adminstrative space is located on the first floor; twenty-seven residential units for students and faculty are on the upper floors.
The Comell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, literature, natural resources, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in the political process and public policy.

## Tuition

Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

## Housing

Apartments are rented at the Cornell Center during the academic year and during the summer. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each onebedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $\$ 150$ is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

## Applications

Application forms are available from the Cornell-in-Washington office at 131 Sage Hall. Applications should be submitted the semester prior to participation.

## Information

Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cormell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 131 Sage Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

## CORNELL INSTITUTE FOR PUBLIC AFFAIRS

132 Sage Hall, Ithaca, NY 14853-6201; telephone: 607 255-8018
Cornell's Institute for Public Affairs (CIPA) seeks to provide stuclents with an understanding of the political processes through which issues, problems, and policies are formulated; the economic bases for government action in a market economy, including both micro- and macroeconomic techniques and problems; and the historical context and development of government programs. The program intends to provide familiarity with public budgets, finance, and the regulatory process, as well as a thorough knowledge of the behavior of both public and private organizations and their management. It also aims to develop competence in the quantitative methods needed to analyze and evaluate programs and policies and sensitivity to the moral and ethical dimensions of policy questions.
The two-year Master of Public Administration program consists of sixteen courses; students are required to take four courses per term for two years. Students with unusually strong backgrounds in required course areas may be granted advanced standing. Special arrangements will be made for students who require additional preparation in required areas.
In consultation with a faculty adviser, each student uses electives to develop an area of concentration. Elective courses and research opportunities may be taken within the program or in any department or college in the university. Students have considerable freedom to design specializations that suit their interests and career goals. Potential areas of concentration include environmental policy, health and human services, international development, labor/management relations, public policy analysis and planning, and science and technology studies.
All students are required to develop and complete a CIPA thesis project. This project, under the supervision of two faculty members in the student's area, should define and analyze a specific policy problem and offer recommendations for furure programs and policies in this area. The CIPA thesis project should allow students to refine and integrate analytical and intellectual skills they have acquired as well as to demonstrate their capacity to understand and deal with real problems facing public agencies.

Application. Applicants are required to submit GRE general test scores.
Financial Support. The budgetary resources of the program are extremely limited, and financial aid will be awarded only on the basis of unusual merit and clearly documented need. Requests should be made directly in writing to Cornell Institute for Public Affairs, 132 Sage Hall, Ithaca, N.Y. 14853-6201.

## CORNELL PLANTATIONS

One Plantations Road (255-3020)
A place of exceptional diversity and opportunities, Comell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its nearly 3,000 acres include the woodlands and gorges bordering campus, as well as 11 specialized gardens and the 150 acre arboretum that features a field flower meadow and trees and shrubs native to New York State. Comell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines that include agronomy, biology, ecology and systematics, entomology, floriculture and omamental horticulture, fruit and vegetable science, geology, landscape architecture, natural resources, plant breeding, and plant pathology. While much of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Comell Plantations.

For those seeking less-strenuous experiences, Cornell Plantations offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe; the intimate gardens shelter you. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, heritage and modern vegetables, international crops, weeds, alpine and rock garden plants, peonies, poisonous plants, groundcovers, rhododendrons, and plants native to the Cayuga Lake Basin.
Students are encouraged to volunteer as photographers, authors, tour guides, and gardeners. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Non-credit courses in horticulture, plant science, geology, free-hand drawing, and other natural history topics are offered throughout the year

## PROGRAM ON ETHICS AND PUBLIC LIFE

117 Stimson Hall (255-8515)
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about
campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.
The university-wide Program on Ethics and Public Life (EPL) is Comell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing anything of their ethical character.
EPL does not intend to create either an undergraduate major or a graduate field in Ethics and Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims, not to create yet another specialized department, but to enrich existing departments with courses that are intellectually serious and practically fruitful at the same time.

## EPL Core Courses

PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality PHIL 343 Political Obligation and Civil Disobedience
GOVT 469/Phil 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation GOVT 466/Womns 466/Law 648 Feminism and Gender Discrimination
GOVT 468/Phil 368 Global Climate and Global Justice
GOVT 491/691 Conflict, Cooperation, and Norm: Ethical Issues in International Affairs

## Related Courses

CEH 356 Economics of Welfare Policy CRP 642 Critical Theory and the Foundations of Planning Analysis

Henry Shue, director, 117 Stimson Hall, 255-8515; Henry Shue, Wyn and William Y. Hutchinson Professor of Ethics and Public Life; Kathryn Abrams, Associate Professor of Ethics and Public Life and Professor of Law.

## HISPANIC AMERICAN STUDIES PROGRAM

## 211 Sage Hall (255-3197)

The Hispanic American Studies Program is an interdisciplinary academic program that focuses on the contributions, concerns, and welfare of those persons of Hispanic origin who reside in the United States. It includes support for historical, linguistic, literary, social, economic, and political studies of this diverse group of Americans. To this end the program objectives are (1) to expand the available course curriculum by providing both undergraduate and graduate courses pertain-
ing to Hispanic American subject matters; (2) to enlarge the size of the Hispanic American faculty at Cornell through permanent appointments and visiting appointments; and (3) to enhance the Hispanic American academic environment on campus through support of such activities as lectures, conferences, seminars, exhibits, and research activities.

## 1994-95 Course Offerings

Because courses relating to Hispanic American Studies are not indexed by that title, courses of particular relevance are listed below. Please refer to the appropriate department for details.
HSS 280/ASR 280: Racism in American Society
HSS 370: Social Welfare as a Social Institution
ILR 469: Immigration and the American Labor Force
SOC 265: Hispanic Americans
SPAND 204: Intermediate Composition and Conversation
SPAND 366/LING 366: Spanish in the United States
SPANL 311-312: Advanced Composition and Conversation
SPANL 332: The Modern Drama in Spanish America
SPANL 346: Hispanic Caribbean Culture and Literature
SPANL 390: Fiction of Modern Hispanic Women
SPANL 396: Modern US-Hispanic Prose Fiction
SPANL 397: Colombian Literature
SPANL 492: Latin American Women Writers HASP/SPANL 105 FWS: Paradise Lost: Biculturalism in America
HASP/SPANL 106 FWS: Searching for Self in Hispanic fiction
HASP/SPANL 107 FWS: The Literature of U.S. Hispanic/Ethnic Women Writers
LING 113 FWS: Two Worlds-Dos Mundos HASP/SPANL 119 FWS; Letters from el Barrio: A Sense of Place in Hispanic American Fiction
HASP/SPANL 125 FWS: The City in Hispanic Novels
HASP/SPANL 126 FWS: The Complex Fate: Self-Identity and Conflict in the United States Hispanic Literature
HASP/SPANL 210: Introduction to Hispanic American Studies
HASP 304/SPANL 304: Hispanic American Poetry
HASP/ARTH 312/SPANL 314: Hispanic Aesthetics: Visual Vernacular
HASP 311/GOVT 357: Transnational Communities: Latin Americans in the United States
HASP 402/SPANL 402/THETR 402: Latin American and Latino Video

## PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

213 Rice Hall (255-8008 or 255-2808)
The Cornell Program in Comparative and Environmental Toxicology is coordinated and facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and
encourages the development of collaborative programs between faculty members in many university departments.

## Graduate Studies

The major in the graduate Field of Environmental Toxicology promotes training leading to the M.S. or Ph.D. degrees and provides both breadth and depth in environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Specialization tracks include cellular and biochemical toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research of the faculty associated with the program is focused on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) and with the ecosystems with which these organisms are associated.

## Courses

Courses in environmental toxicology are cosponsored by the university academic departments and are open to all graduate students and to those undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below, and details of course content are provided elsewhere in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the graduate faculty representative, 213 Rice Hall (telephone: 255-8008).
Tox 370 Pesticides and the Environment (Entomology 370)
Tox 437 Oncogenic Cancer Viruses (Biological Sciences 437 )
Tox 528 Pharmacology (Veterinary Medicine 528)

Tox 607 Ecotoxicology (Natural Resources 607)

Tox 610 Introductory Chemical and Environmental Toxicology (Food Science 610)

Tox 611 Molecular Toxicology (Nutritional Sciences 611)
Tox 621 Clinical Veterinary Toxicology (Veterinary Medicine 621)
Tox 640 Principles of Toxicological Pathology (Veterinary Medicine 640)
Tox 660 Safety Evaluation in Public Health (VetPR 660)
Tox 680 Hazardous Waste Toxicology
Tox 690 Insect Toxicology and Insecticidal Chemistry (Entomology 690)
Tox 698 Current Topics in Environmental Toxicology (Nutritional Sciences 700, NatRes 698, Ag \& Bio Eng 698)
Tox 702 Seminar in Toxicology
Tox 751 Professional Responsibilities of Toxicologists (Biological Sciences 751)
Tox 899 Master's Thesis and Research
Tox 999 Doctoral Thesis and Research

## STATISTICS CENTER

## 482 Caldwell Hall (255-8066)

The Cornell Statistics Center coordinates university-wide activities in statistics and probability at the graduate and research level.

Students interested in graduate study in statistics and probability can apply to the field of statistics or to one of the other graduate fields of study that offer related course work.
Students in the field of statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study in statistics and probability, students should contact the director of the Statistics Center, 482 Caldwell Hall.
The many different programs available to graduate students within the field of statistics can be broadly grouped as follows: biometry, biostatistics, economic and social statistics, operations research, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.
The following list contains selected courses in statistics and probability of interest to graduate students in the field of statistics.

## Economics

519 Econometrics I
520 Econometrics II
619 Advanced Topics in Econometrics 1
620 Advanced Topics in Econometrics II

## Electrical Engineering

411 Random Signals
468 Communication Systems I
561 Error Control Codes
562 Fundamental Information Theory
563 Communication Networks
564 Decision Making and Estimation
567 Communication Systems II
577 Artificial Neural Networks
663 Advanced Topics in Information Theory
664 Foundations of Probability
Industrial and Labor Relations
310 Design of Sample Surveys
312 Applied Regression Methods
410 Techniques of Multivariate Analysis
411 Statistical Analysis of Qualitative Data
510-511 Introductory Statistics for the Social
Sciences
610 Seminar in Modern Data Analysis
611 Statistical Computing
612 Statistical Classification Methods
613 Bayesian and Conditional Inference
614 Structural Equations with Latent Variables
711 Sensitivity Analysis in Linear Regression
712 Theory of Sampling
713 Empirical Processes with a Statistical Application
714 Modern Distribution Theory

## Mathematics

471 Basic Probability
472 Statistics
571-572 Probability Theory
573 Multivariate Analysis
574 Mathematical Statistics
670 Topics in Statistics
Operations Research
561 Queuing Theory and Its Application
562 Inventory Theory
563 Applied Time Series Analysis
575 Experimental Design II
577 Quality Control
580 Design and Analysis of Simulated
Systems
630-631 Mathematical Programming I and II
650 Applied Stochastic Processes
651 Applied Probability
662 Advanced Stochastic Processes
663 Time-Series Analysis
665 Advanced Queuing Theory
670 Applied Statistics

671 Intermediate Applied Statistics
674 Design of Experiments
676 Statistical Analysis of Life Data
678 Asymptotic Methods in Statistics
680 Simulation
769 Selected Topics in Applied Probability

## Statistics and Biometry

408 Theory of Probability
409 Theory of Statistics
417 Matrix Algebra
451 Mathematical Modeling of Populations
601-604 Statistical Methods I, II, III, and IV
605 Applied Regression Analysis
606 Sampling Biological Populations
607 Nonparametric and Distribution-Free
Statistical Methods
642 Advanced Mathematical Population Studies and Modeling
651 Mathematical Population Studies and Modeling
662 Mathematical Ecology
681 Topics in Environmental Statistics
697 Special Problems in Statistics and Biometry
717 Linear Models
718 Variance Components
795 Statistical Consulting

## VISUAL STUDIES

Studio G, 726 University Ave. (255-6770) or Sb20A Center for Theatre Arts (254-2782)
Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study is therefore ideally conceived of in transdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.
In addition to the courses listed below, which represent only a sampling of formal curricular offerings pertinent to visual studies, interested students should be aware of the programs and facilities available in the Herbert F. Johnson Museum of Art and the ETV Center of the College of Human Ecology, as well as the frequent showings by Cornell Cinema and Pentangle II. For additional information, contact Robert Ascher (Anthropology) or Marilyn Rivchin (Theatre Arts)

## Courses

Some of these courses may not be taught in 1993-94. For information about availability consult the appropriate departmental listings.
An Introduction to Architecture (Architecture 132)

Art and Visual Thinking (Textiles and Apparel 125)

Asian American Images on Film (Asian American Studies 435)
Blacks in Communication Media (Africana Studies 303)
Cinema to Literature (Italian 399)
Color, Form, Space (Art 110)
Computer Art (Art 171)
Computer Graphics (Architecture 374 and Computer Science 417)
Computer Vision (Electrical Engineering 547)
Design I and II (Design and Environmental Analysis 101-102)

Documenting the Depression: Film, Literature, and Memory (History 476)
Fiction and Film in France (French 499)
Film and Performance (Theatre Arts 413 )
Filming Other Cultures (Anthropology 290 and Theatre Arts 290)
Fundamentals of $16-\mathrm{mm}$ Filmmaking (Theatre Arts 377)
The Geometry of Tilings, Polyhedra and Structural Engineering (Mathematics 151)
German Film (German Studies 396 and Theatre Arts 396)
Graphic Design (Design and Environmental Analysis 349)
History and Theory of Commercial Narrative Film (Theatre Arts 375)
History of Art Criticism (History of Art 421)
Human Perception (Psychology 342)
The History of the Book (English 450)
Image Analysis I (Civil and Environmental Engineering 613-614)
Impact of Communication Technologies (Communication 626)
The Indian Example and the Visual Tradition in Culture (Architecture 448)
Introduction to Film Analysis: Meaning and Value (Theatre Arts 274)
Introduction to Mass Media (Communication 120)

Introductory Photo I (Art 161 and Architecture 251)

The Japanese Film (Asian Studies 313 and Theatre Ars 313)
Literature to Cinema (Italian 390)
Machine Vision (Computer Science 664)
The Medieval Illuminated Book (History of Art 337)

Modern Experimental Optics (Physics 330)
Myth onto Film (Anthropology 653 and Theatre Arts 653)
Optical Methods of Biologists (Biological Sciences 450)
Perception (Psychology 205)
Photo Communication (Communication 234)
Political Theory and Cinema (German Studies 330 and Theatre Arts 330)
Psychology of Television (Human Development and Family Studies 461)
Psychology of Visual Communications (Psychology 347)
Russian Film of the 1920s and French Film of the 1960s (Theatre Arts 378)
Scientific Illustration (Freehand Drawing 417)
Seminar in Museum Issues (History of Art 407) Spanish Film (Spanish 399)
Studies in Modern Art (Art History 463)
Video Communication (Communication 348)
Visual Anthropology (Anthropology 453)
Visual Communication (Communication 230)
Visual Ideology (German 660 and Theatre Arts 660)

Visual Perception (Psychology 305)
The Visual System (Neurobiology and Behavior 326)

## Business and Preprofessional Study

## UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of
the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)
The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Ars and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), and industrial and labor relations.
Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales and marketing. Areas of specialization include business management and marketing, farm business management and finance, and food industry management.
Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.
Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technologyoriented society.
Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.
Consumer economics and housing. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.
Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between
employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employed.

## Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Srudies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science,
Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

## Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

## SELECTED BUSINESS AND <br> MANAGEMENT COURSES

## Accounting

Ag Ec 221 Financial Accounting
Ag Ec 323 Managerial Accounting
H Adm 120 Survey of Financial Management H Adm 226 Financial Management
JGSM NBA 500 Intermediate Accounting
JGSM NBA 501 Advanced Accounting
JGSM NBA 505 Auditing
OR\&IE 350 Cost Accounting Analysis and Control

## Communications

Comm 201 Oral Communication
Comm 204 Effective Listening
Comm 272 Principles of Public Relations and Advertising
Comm 301 Business and Professional Speaking
Comm 372 Advanced Advertising

H Adm 165 Managerial Communication: Writing Principles and Procedures
H Adm 364 Advanced Business Writing

## Computing

Ag Ec 412 Introduction to Mathematical Programming
Ag Ec 413 Information Systems and Decision Analysis
ABEN 204 Introduction to Computer Uses
COMS 100 Introduction to Computer Programming

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
H Adm 323 Hospitality Real Estate Finance
H Adm 350 Real Estate Management

## Transportation

CEE 361 Introduction to Transportation Engineering
CEE 660 Transportation Planning and Policy

## PRELAW STUDY

Law schools do not prescribe any panticular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no sulject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.
2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government. and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some
knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.
3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.
4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background-for example, in agriculture, chemistry, physics, or engineering-when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.
The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.
It may be possible for exceptionally wellqualified students in other Comell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

## PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as genetics, embryology, histology, or physiology.
There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and
benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.
Qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance into a double registration program arranged between Comell University and Cornell University Medical College in New York City. This program allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York, 14853-1601.

## PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Comell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.
The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Comell, may vary at other veterinary colleges.
For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admission to the College of Veterinary Medicine at Comell, obtained by writing to the Office of Student Services, College of Veterinary Medicine, Cornell University, C-106 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.
Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Comell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

## COLLEGE OF AGRICULTURE AND LIFE SCIENCES

## ADMINISTRATION

David L. Call, dean
Brian F. Chabot, associate dean
William G. Boldt, assistant dean for public affairs
George J. Conneman, associate dean and director of academic programs
Elizabeth A. Oltenacu, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of research
Lucinda A. Noble, associate dean and director of cooperative extension
R. David Smith, associate director of cooperative extension

Norman T. Uphoff, director of international agriculture
Larry W. Zuidema, associate director of international agriculture

## Office of Academic Programs Staff

Student services: Donald Burgett, Lisa Ryan, Catherine Thompson
Registrar: Mary Milks
Admissions: Bonnie Comella, Laurie Gillespie, Randy Stewart
Career development: William Alberta, Amy Benedict-Martin

## Department Chairs

Agricultural and biological engineering: R. B. Furry, Riley-Robb Hall

Agricultural, resource, and managerial economics: A. Novakovic, Warren Hall
Animal science: H. F. Hintz, Morrison Hall Communication: R. D. Colle, Kennedy Hall Education: H. D. Stuphin, Kennedy Hall Entomology: G. Eickwort, Comstock Hall Floriculture and ornamental horticulture: G. L. Good, Plant Science Building

Food science: R. A. Ledford, Stocking Hall
Fruit and vegetable science: E. E. Ewing, Plant Science Building
Natural resources: D. J. Decker, Fernow Hall
Plant breeding and biometry: E. D. Earle, Emerson Hall
Plant pathology: W. E. Fry, Plant Science Building
Rural sociology: D. L. Brown, Warren Hall
Soil, crop and atmospheric sciences:
R. J. Wagenet, Emerson Hall

## College Focus

The College of Agriculture and Life Sciences provides educational programs that prepare young men and women with technical, management, and leadership skills. The college's programs fall into three major areas:

- Science and technology
- Management
- Communication and education

The college focuses on a broad-based education for its students, and on a problemsolving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.
There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences
in their broadest and most dynamic meaning:

- Agriculture (production and marketing)
- Community and Rural Development
- The Environment
- Food Systems, Nutrition, and Health
- International Dimensions
- Life Sciences

## Facilities

The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Comell family farm.
Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Office of Student Services and the Registrar.
Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

## DEGREE PROGRAMS

The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.
Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

## Graduate Degrees

Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following gracluate fields have primary affiliation in Agriculture and Life Sciences. Current graduate field representatives are also listed.
Agriculture [M.P.S. (Agr.)], G. Conneman, Roberts Hall
Agricultural and Biological Engineering. M. Walter, Riley-Robb Hall

Agricultural Economics, R. Boisvert, Warren Hall
Animal Breeding, E. J. Pollak, Morrison Hall Animal Science, R. Quaas, Morrison Hall
-Biochemistry, Molecular and Cell Biology;
J. Calvo, Biotechnology Building

Biometry, S. Searle, Warren Hall
Communication, C. Glynn, Kennedy Hall
Development Sociology, T. Lyson, Warren Hall
${ }^{\bullet}$ Ecology and Evolutionary Biology, R. Root, Corson Hall
Education [also M.A.T.], A. Berkey, Kennedy Hall
Entomology, J. Liebherr, Comstock Hall
Environmental Toxicology, A. Yen, Veterinary Research Tower
Floriculture and Omamental Horticulture, N. Bassuk, Plant Science Building

Food Science and Technology, J. Hotchkiss, Stocking Hall
*Genetics and Development, M. Goldberg, Biotechnology Building
International Agriculture and Rural Development [M.P.S. (Agr.)], R. Blake, Morrison Hall
International Development, N. Uphoff, Caldwell Hall
Landscape Architecture [M.L.A.], L. Mirin, W. Sibley Hall
*Microbiology, S. Zinder, Wing Hall

Natural Resources, R. Oglesby, Fernow Hall
*Neurobiology and Behavior, A. Bass, Seeley Mudd Hall

Nutritional Sciences, K. Rasmussen, Martha Van Rensselaer Hall
*Physiology, J. Wootton, Vet Research Tower
*Plant Biology, J. Doyle, Mann Library Building
Plant Breeding, D. Viands, Bradfield Hall
Plant Pathology, J. Lorbeer, Plant Science Building
Plant Protection [M.P.S. (Agr.)], G. Bergstrom, Plant Science Building
Pomology, M. Pritts, Plant Science Building
Soil, Crop and Atmospheric Sciences, S. Riha, Emerson Hall

Statistics, M. Wells. Caldwell Hall
Vegetable Crops, P. Ludford, Plant Science Building
*Zoology, D. Noden, Veterinary Research Tower

## -Division of Biological Sciences

## Bachelor of Science Degree

Deparments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in sixteen major fields. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations within the major field

Agricultural and Biological Engineering:
K. Gebremedhin, 320 Riley-Robb) Hall

Animal Sciences: E. J. Pollak, B-22 Morrison Hall
Applied Economics and Business Management: D. Streeter, 354 Warren Hall
Biological Sciences, Division of: H. Stinson, 200 Stimson Hall
Biometry and Statistics: S. Schwager, 339 Warren Hall

Communication: B. Earle, 332 Kennedy Hall
Education: D. Hedlund, 403 Kennedy Hall
Entomology: R. Roush, 6130 Comstock Hall Food Science: J. Sherbon, 207 Stocking Hall
Landscape Architecture: P. Trowbridge, 442 Kennedy Hall
Natural Resources: T. Fahey, 8F Fernow Hall Nutrition, Food, and Agriculture: C. Bisogni, 334 MVR Hall
Plant Science Units (Plant Biology, Breeding, Pathology/Protection, Floriculture, Pomology. Vegetable Crops): D. Viands, 523 Bradfield Hall
Rural Sociology: D. Brown, 133 Warren Hall
Soil, Crop and Atmospheric Sciences: G. Fick, 505 Bradfield Hall
Special Programs in Agriculture and Life Sciences: D. Burgett, 140 Roberts Hall

## Summary of Basic College Requirements for Graduation

1. Credit Hours
a. Minimum: 120
b. Minimum with letter grade: 100 (number with S-U grades pro-rated for transfer students)
c. Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
d. Minimum from College of Agriculture and Life Sciences: 55
e. Maximum from endowed colleges without additional charge: 55. Payment must be made for each credit taken in excess of the 55 allowed, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.
f. Maximum transferred in: 60 ; minimum at Comell: 60
Transfer credit will not be accepted for the Project Advance Programs. If a student is enrolled in a college/university course, during his/her high school years, transfer credit will be given only if certain criteria are met, i.e., taught by a university/college instructor, in the college/university environment, along with other college/university students and graded as the college/university students are graded. If one of these is not met no transfer credit will be given. Written verification may be necessary
Note: Credits received for physical education and for certain other courses, such as Mathematics 109, Education 005 and LSC courses, do not count toward the 120 hours but are included on the transcript and in the grade-point average.
2. Residence
a. Normally, eight full-time semesters
b. Seven semesters, if all other degree requirements are met, with a grade-point average of 2.0
c. Minimum of 12 credits per semester
d. Minimum of two semesters, including the final semester prior to graduation, in the College of Agriculture and Life Sciences (residency in the Internal Transfer Division [ITD] does not count toward residency in the college)
e. Students who have completed 8 semesters in residence at Cornell, including two in the college, and who have 8 or fewer credits remaining for graduation may petition for approval to complete this work elsewhere.
3. Physical Education (see note at 1 f )
a. Completion of university requirement for two terms of work
b. Transfer students may be exempt from part or all of the requirement.
Note: Requests for exemption should be made in writing to the University Faculty Committee on Physical Education. Requests for postponement should be referred to Alan Gantert, Teagle Hall (255-4286). Medical postponement requests must go through Gannett Clinic.
4. Grade-Point Average (GPA)
a. Cumulative GPA: 1.7 or above must be maintained
b. Final semester GPA: 1.7 on a minimum of 12 credits in final term before graduation.
Note: Only grades earned at Comell and while registered in the college are included.

## 5. Distribution

The purpose of the distribution requirement is to provide a broad educational background and acquaint students with a broad range of subject matter. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe; through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.
Credits received for independent study, field, teaching, or work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline such as Education 005, will not be counted.
Group A: Physical Sciences. 9 credits of 100or 200 - level courses, in at least two disciplines, including at least one course in chemistry or physics.

## Chemistry

Physics
-Mathematics (excluding Education 005 and Mathematics 109)
Education 115
Soil, Crop and Atmospheric Sciences 131
Biometry
Astronomy
Geology
*The college mathematics requirement is described below
Group B: Biological Sciences. 9 credits, including 6 of introductory biological science.

Biological Sciences (except 152, 160, 200
[unless permission of associate director of the division of Biological Sciences is obtained], 202, 205, 206, 208, 209, 301 or 367)

Animal Sciences $100,221,300,301$
Entomology 212
Nutritional Sciences 262
Plant Breeding 225
Plant Pathology 301, 309
Group C: Social Sciences and Humanities. 12 credits ( 6 in each of the following two categories):

Social Sciences. 100 -through 400 -level courses in the following departments (excluding Freshman Seminars):

## Anthropology

Archaeology
CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)

Communication 418, 422
Economics (except Agricultural Economics)

Education 271, 311, 317, 370, 378
Government (including Africana Studies 190)

HDFS 150 (cannot receive credit for this course and Soc 243)
LA/CRP 261, 360, 363
LA/ARKEO 365
Psychology
Sociology (including Rural Sociology except RS $100,175,318,442$ )
Humanities. 100 - through 400 -level courses in the following departments (excluding
Freshman Seminars and language courses):
Africana Studies (literature and history)
Asian American Studies
Asian and Near Eastern Studies (history and literature)
Classics
Comparative Literature
English (literature only)
French, German, Italian, Russian, and Spanish (literature only)
History
History of Art/History of Architecture LA 382
Music and Theatre Arts (theory, literature, and history only)
Philosophy (also Natural Resources 407) Religious Studies
Rural Sociology 100, 175, 318, 442
S \& TS 233
Group D: Written and Oral Expression. 9 credits, of which at least 6 must be in written expression, selected from the following:

## Freshman Seminars

Communication 201, 350, 352, 360, 363, 365
English 280-281, 288-289, 382-385, 388-389

## 6. Mathematics

The faculty requires minimum competency in mathematics as a requisite to satisfactory completion of a degree. As a measure of their competency in mathematics, all entering undergraduates, including those presenting advanced placement or transfer credit in college calculus, must take the test. The test is administered free of charge just prior to registration each semester. No student may repeat the placement test. It consists of fiffy sample questions from arithmetic, algebra, geometry, trigonometry, and basic calculus.
The score on the math test has two components and will place each student in one of three groups, defined by the score of each component of the math test.
Mathematics requirements for each group
Group I Students in this group are exempt from the math requirement. If further math is needed for the major area of study, they should consider taking calculus (MATH 111 or MATH 191).
Group II Students in this group MUST complete one math course at Cornell usable in Group A. The recommended math course is EDUC 115 or MATH 105. BTRY (formerly STATS) 102 is also acceptable.
Group III Students in this group are automatically registered in EDUC 005 and must also complete one math course at Cornell usable in Group A.

## Transfer credit for mathematics

Most college-level math courses in a transfer student's record will be transferred (limit 6 hours into Group A of the college distribution), and the student will be held for the results of the math test and must satisfy the college's math requirement.

Students entering with A-P calculus credit will also be held for the results of the math test, and must satisfy the college's math requirement.
7. Faculty Adviser
a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study and enroll in courses appropriate to the degree programs offered by the college.
b. Course enrollment each semester should be planned in consultation with the faculty adviser. The signature of the faculty adviser indicates approval of, or at least consent to, the choice of courses made and is required before the course enrollment can be processed.
c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.
8. Progress toward the Degree
a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.
b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent prior to the graduation date. A student who wishes to continue study after graduation must apply for admission as a special student.
c. Graduation with distinction: Students who rank in the top 10 percent of the college's graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.
d. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by the 15th day of the first month of the semester in which they will complete their graduation requirements. This form must be signed by the student, the adviser, and the registrar, confirming that all requirements for graduation have been met.

## STUDENTS

Undergraduate enrollment is approximately 3,000, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 transfer students are enrolled. Members of the faculty of the college serve as chairs of the

Special Committees of about 1,000 graduate students.

## Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.
Most students come from New York State, but around 30 percent come from other parts of the United States or abroad. About half of the undergraduates are women. Approximately 14 percent are identified as members of minority ethnic groups.

## Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.
A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request and submitting a letter explaining reasons for making the transfer.
Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year.
In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7 ) and take approved courses to assure acceptance.

## Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience and a list of the courses they want to take. For more information, students should contact the Admissions Office, 177 Roberts Hall.

## Part-time Students

All students in the College of Agriculture and Life Sciences are expected to be enrolled as full-time students in a registered program of study. Part-time students must register in the Division of Summer Session, Extramural Courses, and Related Programs. The Continuing Education Information Service, B20 Day Hall. provides information, counseling, and special programs for mature students throughout the university.

## Off-Campus Students

Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical
microbiology internship. Students intending to receive Comell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

## Off-Campus Courses

Students in CALS are to be registered for at least twelve (12) hours of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS
Two exceptions would be the joint enrollment agreements between Cornell and Ithaca College and Wells college. Other exceptions would be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee would approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Comell is discouraged.

## Leave of Absence

A student considering taking a leave of absence from the university should contact the Office of Student Services. A petition must be filed when requesting a leave of a semester or more. Students returning from a leave of absence do not need to reapply for admission; they should contact Student Services.

## Withdrawal

A student who finds it necessary to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

## Graduation

Diplomas are ordered from the Office of the University Registrar, and distributed to those who have completed the degree requirements and have been approved by the college faculty.

## ADVISING AND COUNSELING SERVICES

Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus they consider advising to be an important and integral part of the undergraduate program.
The Office of Student Services has overall responsibility for coordinating the college advising and academic counseling program. Each student enrolled in the college is assigned to a faculty adviser in the major field of study for aid in developing a program of study and peer advisers are available to help with problems of a general nature relating to personal matters and campus life.

Student Services provides a variety of services for undergraduates in the College of Agriculture and Life Sciences. The staff is available to help students with academic, social, and personal concerns. In addition, learning skills information and tutoring is offered, at no charge, by the college's honor society, Ho-Nun-De-Kah. Assistance is also available for students considering submitting petitions for waiver of college regulations.
The office is located on the first floor of Roberts Hall (room 140). Appointments are not necessary and questions regarding services and procedures should be directed to Donald Burgett and the Student Services staff.
Minority students in the College of Agriculture and Life Sciences receive counseling, tutoring, advising, and referral to agencies that will meet their special needs. The Educational Opportunity Program (EOP) is a statesupported program intended to assist New York State students who meet specific economic and academic criteria set by the State Programs Office and the NYS Board of Regents. Eligible students are accepted during the admissions process.
For further information, please contact Catherine Thompson in 140 Roberts Hall.
The Office of Career Development offers a variety of services to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.
An active on-campus recruitment program is integrated with the other services provided by the office. Extensive job vacancy files are updated daily and a bulletin of select job listings is published each month. The Career Library contains an extensive collection of current and useful material. The Sigi Plus system is a computer-assisted guidance system that can help in career and educational planning, providing useful information and ideas about work-related interests, skills and values, and occupations and careers. Internships, summer jobs, job search presentations, and assistance with resume writing are other activities of interest.
The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years. For further information students should contact William Alberta and the staff in 177 Roberts Hall.
Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall, after students have a financial aid package established through the university office in Day Hall. Grants recommended by the college Financial Aid and Scholarship Committee are processed through the university's Office of Financial Aid
A small loan fund is administered by the college through the Office of Academic Programs to assist students facing short-term emergencies. The loans are interest-free and
are usually made for no more than ninety days. For information and an application form students should contact the Office of Academic Programs, Roberts Hall.

## Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students. and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or bee a party to another student's failure to maintain academic integrity.
The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code

1) Students assume responsibility for the content and integrity of the work they submit, such as papers, examinations, or reports.
2) Students are guilty of violating the code if they

- knowingly represent the work of others as their own
- use or obtain unauthorized assistance in any academic work
- give fraudulent assistance to another student
- fabricate data in support of laboratory or field work
- forge a signature to certify completion or approval
- knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
- in any other manner violate the principle of absolute integrity

3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.
4) Faculty members fulfill their responsibility to

- maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
- make clear the conditions under which examinations are to be given
- make clear the consequences of violating any aspects of the code
- provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do on their own without help from others
- state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
- approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
- monitor the work and maintain such records as will support the crucial underpinning of all guidelines; the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member and the student involved. If necessary, a hearing before a hearing board follows.
The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the coordinator of student services, who serves as a nonvoting record keeper. Professor D. Grossman is the current chair.
Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Office of Student Services, 140 Roberts Hall.

## ACADEMIC POLICIES AND PROCEDURES

## Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record card is on file for each matriculated student and is updated whenever new information becomes available. Staff members are available in Roberts Hall to consult with students regarding the assignment of credit toward meeting distribution and elective requirements and to verify the official summary of record.
The Committee on Academic Achievement and Petitions is a standing committee of six college faculty members and two students. On behalf of the faculty and subject to its review, the committee

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of all students not meeting academic requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic course work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions.

A petition to be exempt from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Office of Student Services, 140 Roberts Hall

A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required; it indicates the adviser's awareness of the petition. The adviser's recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

## Registration Procedures

All students must register with the university and "check-in" with this college at the beginning of each semester. Registration materials are available at a time and place announced each term by the Office of the College Registrar.

## Course Enrollment Procedures

To enroll in courses, students pick up materials from the college Registrar's Office, 140 Roberts Hall; plan a schedule in consultation with their adviser; and return the completed forms to the Registrar's Office for verification and processing. Class lists are generated on the basis of the properly filed course enrollment forms.
To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be studying off campus or abroad should file the intent to study off campus form to ensure that proper registration will occur. These forms are available in the Program office (Comell Abroad, 474 Uris Hall).

Students may enroll again for a course in which they received a grade of $F$ in a previous semester. The grade received the second time will be recorded and both grades calculated as part of their GPA.
Students must not enroll again for a course in which they received an incomplete. Instead, work for that course should be completed, and the instructor files an incomplete make-up form to assign the grade. An incomplete not made up by the end of two successive semesters of registration reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.
Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the two grades for the same course.

A student is held responsible for and receives a grade for those courses in which he or she
enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on an official form provided for that purpose.
Add/Drop/Changes are made by filing properly signed forms in the Registrar's Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to add or to drop a course.
Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term and may drop courses until the end of the seventh week.
Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions. A form is available in Student Services, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If the petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

## Grade Reports

Grade reports for the fall term are included in spring term registration materials; grade reports for the spring term are mailed by the office of the university registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May

## Academic Deficlency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. In case of students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings to students, placing them on probation, suspending them, decreeing that they may not reregister, granting them leaves of absence, and advising them to withdraw.
Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level
sufficient to assure graduation within eight semesters and grades averaging $C-$ (1.7) or higher are prima facie evidence of satisfactory progress.

## HONORS PROGRAM

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.
An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.
Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)
Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student's gradepoint average, the student will be officially enrolled in the honors program.
Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.
The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 30 will be graduated with honors.
Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

## Animal Sciences

Faculty committee: W. B. Currie, chair; D. E. Bauman, P. A. Johnson
The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.
Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying
for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee and to a selected external reviewer by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor, the external reviewer, and the honors committee.
Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair. 434 Morrison Hall.

## Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Applications and details pertaining to the program requirements may be obtained from the division's Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall.

## Entomology

Faculty committee: B. L. Peckarsky, chair An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Comell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.
The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
- Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology area honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

## Natural Resources

Faculty committee: M. E. Richmond, chair; J. W. Kelley, R. J. McNeil

The honors program in natural resources provides an opportunity for undergraduates to participate in independent research in the areas of fisheries and aquatic science, forest science, wildlife science, ecotoxicology, and conservation. The subject matter and nature of the research experience may be quite varied in this program but require the guidance and supervision of a faculty member with substantial interest and expertise in the problem area chosen.
In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master's thesis or in the form of a scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.

## Nutritional Sciences

Faculty committee: M. N. Kazarinoff, R. S. Parker, B. A. Lewis

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.
Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for honors they need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors credits for spring semester junior year and both semesters senior year are designed LET, individual mentors may choose the R grade for work in progress until the project has been fully completed. An outline of activities for both years is given below.

## Junior Year

Fall Semester Course No: NS 398 (No credit, S-U): Students are oriented to the program at a group meeting and provided material that summarizes the range of research activities in DNS. The honors chair/committee will have solicited and received responses from faculty members who have openings and willingness to work with an honors student each year. These responses will be given to the students and they will be asked to indicate their tentative choice(s) to the honors chair, who will be available to help getting them placed. When these arrangements have been completed, students will begin a literature search that focuses on their research problems. After fall break, the group will meet alternate weeks to present and discuss literature reviews with each other and the honors chair.
Spring Semester ( $1-3$ credits, LET*) Each student registers under the number NS 498 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/ discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser. Three to four group sessions will be scheduled after spring break in which the students will present their reports informally. The final written and graded literature reviews and proposals will be submitted to the honors committee by the last day of exams.

## Senior Year

Fall Semester Students will register under the number NS 499 ( $2-4$ credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research early in the fall semester at the latest. The objective for the semester will be to conclude most of the hands-on research/data acquisition. The honors committee or its chair will hold four group meetings with the students during the latter part of fall semester for informal progress reports and discussion.
Spring Semester Students will again register under course number NS 499 for $2-4$ credits LET, by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

## Several important deadlines should be noted.

1. Last week in March: The names of thesis readers** are to be in the hands of the honors committee.
2. Third to fourth week of April: A final draft of the thesis is handed to the readers
3. First to second week of May: Scheduled seminars for oral presentations of each students research.
4. Last day of oral presentations: Final form of the thesis is handed to the honors chairman.
To help students meet these deadlines, 2-3 class sessions will be held before spring break for informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

* Grade is determined by each student's mentor.
*Two readers knowledgeable in the area of the student's research topic to be chosen by the honors committee and faculty advisers.

## Physical Sciences

Faculty committee: J. W. Sherbon, chair; G. W. Fick, C. E. McCulloch, J.-Y. Parlange

The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Agricultural and Biological Engineering; Soil, Crop, and Atmospheric Sciences; Food Science; or in the Biometrics Unit.
Students must be enrolled in the program for a minimum of two semesters and must also enroll in the appropriate departmental independent study course for a total of at least 6 credits. They must submit a report of their research to the honors committee by the end
of classes of the semester in which they expect to graduate.
Details of the program can be obtained from the chair of the physical sciences honors committee.

## Plant Sciences

Faculty committee: R. L. Obendorf, chair; L. L. Creasy, A. M. Petrovic, W. A. Sinclair

Before acceptance into the program, students must submit to the chair of the plant sciences honors committee a completed application and a one-page tentative project proposal by the end of the second week of classes in the first semester of their senior year. The project proposal should include a clear statement of the objective(s) of the research, methodology, and needs for space, equipment, and supplies (attached budget required). The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has seen and approved the project plan. Full committee approval is needed for acceptance into the program.
Completion of the honors program in plant sciences requires two copies of a report of independent research in the honors program to be submitted to the chair of the honors committee before the last day of classes of the semester in which the degree is sought. The report should be written in the format for research publication required by that discipline of plant science in which the student is enrolled. The report must be accompanied by a letter of recommendation from the supervisor of the research, that letter reflecting the supervisor's familiarity with the research and providing an evaluation of the performance and a recommendation for graduation with honors.
The honors committee will review the report, and, if a majority of the committee votes favorably, the chair will recommend graduation with honors for that student in a letter to the director of academic programs. One copy of the report will be returned to the student.

## Social Sciences

Faculty committee: B. V. Lewenstein, chair; E. J. Haller, M. J. Pfeffer, L. S. Willett

Acceptance into the behavioral and social sciences honors program of the College of Agriculture and Life Sciences is contingent on meeting all the criteria described above, on information in the student's written application, and on a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the first semester of the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.
The proposal must be 5-10 typed, doublespaced pages in length and include the following sections:

- Research Topic: This section should contain a statement of the problem to be studied or the topic of interest. The
relevant literature should be briefly reviewed and the background of the problem or topic discussed; a more extensive bibliography should be included.
- Research Questions/Empirical Hypotheses: This section should contain specific questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.
- Research Methods: This section should contain a discussion of models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.
- Expected Significance: What new knowledge or information is likely to be forthcoming and why is it important?
Faculty advisers must be members of the graduate faculty. Exceptions to this rule will he granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for independent study directed by the faculty adviser in conjunction with an honors project.
Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate fields. Four copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

## INTERCOLLEGE PROGRAMS

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.
The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.
Students who have been offered admission to the S. C. Johnson Graduate School of Management upon completion of the B.S degree in Agriculture and Life Sciences may take a program of management courses in their senior year if it is approved by their
college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate statutory college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.
Students in the Field Program in Agricultural and Biological Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

The Program in Landscape Architecture is cosponsored by the Department of Floriculture and Ornamental Horticulture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.
The Division of Nutritional Sciences is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate nutrition major is based in the College of Human Ecology. Students in Agriculture and Life Sciences may study nutrition in areas such as animal sciences; food-industry management; food science; microbiology; nutrition, food, and agriculture; and fruit or vegetable science. Students may also plan a concentration in biological sciences or a concentration in general studies in agriculture to include a human nutrition component.
The Program on Science, Technology, and Soclety is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate curriculum in Biology and Society. A concentration in general studies in the agriculture major may be planned in consultation with a faculty adviser to include a biology and society component. Further information, including a list of courses, may be obtained from the program office, 632 Clark Hall.
The American Indian Program (AIP) is a multidisciplinary intercollege program with instructional, research, and extension components. The instructional core consists of courses focusing on American Indian life with emphasis on the Iroquois and other Indians of the Northeast. A description of the program and general information is available from the director of the American Indian Program, Caldwell Hall.
The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET).

Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 16 Fernow Hall.
The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARS) is an interdisciplinary intercollege center with teaching, research, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEARS office in Hollister Hall.

## OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Comell, or (2) credit may be earned in Comell courses that require offcampus activity.
An Intent to Study Off Campus form should be filed with the college registrar before leaving campus. Tuition may be reduced. In some cases stipends or cost of living allowances are provided. Students should consult with the Office of Financial Aid if receiving financial aid and clear all accounts with the bursar prior to departure.
Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

## Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components and offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany areas may be elected.
Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.
Applicants are screened by the ALS Internship Committee in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that the last term average must be 1.7 or above.
All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The
paper required in each section constitutes an independent study project to be directed and evaluated by a Comell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.
Information and applications are available in the Career Development Office, 177 Roberts Hall.

## Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Comell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and, 2) studies in the American experience. The program also offers a unique externship opportunity: students serve as externs in a federal agency, congressional office, or nongovernmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty. Potential externships are arranged through, and approved by, the Cornell-in-Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500. For further information, see p. 19 or inquire at 131 Sage Hall, 255-4090.

## SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward, or the R/V Corwith Cramer. For more information, students should contact the Comell Marine Programs office, G14 Stimson Hall. ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

## Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Division of Biological Sciences, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

## Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluation of student performance.
For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreedupon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, Roberts Hall.
A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of offcampus work experiences that do not have the continued presence of a Cornell faculty member. The 6 -credit allotment includes transfer credit and credit for internships in other colleges at Comell. The 6 -credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.
The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit nor in cases where the student has received financial remuneration.
All students enrolling for an internship must file an independent study, research, teaching, or internship form with the Office of the College Registrar. If the study is to take place off campus, the Intent to Study Off Campus form should also be filed with the college registrar.

## Overseas Academic Programs

The Comell Abroad program is open to students in all colleges of the university. Students in the College of Agriculture and Life Sciences should consult with their faculty adviser and the college registrar to ensure that credit received for academic work abroad will meet requirements for graduation. The Office of Student Services, 140 Roberts Hall, has information and application forms.
Cooperative arrangements with the University of Reading, in England, and the University of Dublin, in Ireland, enable the college to endorse several students for a year of study under a tutor in those schools. The Swedish exchange program is operated in cooperation with the Agricultural College of Sweden at

Uppsala. The ALs student selected to participate in the Swedish exchange spends the junior year at Uppsala. All essential expenses in Sweden, including a living allowance, are provided by a student group there. Round-trip air transportation must be paid by the student. An exchange student from Uppsala spends a year at Cornell, supported by the college and the Cornell student in Sweden. A similar program is operated in cooperation with ITESM in Monterrey, Mexico.

## MAJOR FIELDS OF STUDY

The college curriculum emphasizes the biological and physical sciences and the technology basic to the study of agriculture and life sciences. The sixteen major program areas reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.
Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

## Agricultural and Biological Engineering

Agricultural and biological engineering is a field of engineering application wherein the engineering, biological, environmental, agricultural, and social sciences are applied to design and manage processes and systems to solve technical problems related to agriculture and biology, while at the same time conserving our natural resources and the quality of our environment. Increasingly important aspects of the field are engineering applications related to biotechnology, environmental quality engineering, and international engineering. As a field of engineering application, agricultural and biological engineering is rapidly evolving to encompass new uses of electronics, sensors, and computers, advances in the biological sciences, and engineering analysis applied to systems ranging from microcosms, such as carbon dioxide diffusing into leaf stomatal cavities, to entire ecosystems surrounding rivers and lakes, to growing food in space colonies.
Because agricultural and biological engineers work at the interface between the biological and physical sciences, they must be knowledgeable in each. They are educated in mathematics, physics, chemistry, and the engineering sciences; and in biology and the agricultural and social sciences. It is the mix of engineering and biology that makes Agricultural and Biological Engineering unique.
The undergraduate program area offered by the Department of Agricultural and Biological Engineering includes three distinct academic programs: Agricultural and Biological Engineering, Environmental Systems Technology, and Agricultural Systems Technology.

The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.
The Agricultural and Biological Engineering program has three concentrations-Agricultural Engineering, Biological Engineering, and Environmental Systems Engineering-and is intended for students who are particularly interested in the theoretical and fundamental aspects of engineering required for analysis, design, and research. Students in this program must be highly motivated and have strong aptitudes for mathematics and the sciences. Biological, social, and agricultural sciences are integrated into this program, but mathematics and the physical sciences dominate. The program is accredited by the Accreditation Board for Engineering and Technology (ABET) and the Egineering Accreditation Commission (EAC) and is jointly sponsored by the New York State College of Agriculture and Life Sciences and the College of Engineering. Students register in both colleges during their junior and senior years, with the primary college being the College of Engineering during the junior year, then the College of Agriculture and Life Sciences during the senior year. Because the Agricultural and Biological Engineering program is a nationally accredited engineering program, it is more structured than the two technology programs.
The Agricultural and Biological Engineering program provides excellent preparation for a variety of positions in industry and public agencies, and qualified graduates often continue study in a Master of Engineering. Master of Science, or doctoral degree program; or in veterinary science or medicine. For specific course requirements and other information for the Agricultural and Biological Engineering program, see the section on the College of Engineering in this same publication.
The two technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.
Specific course distribution requirements for the academic programs in Environmental Systems Technology and Agricultural Systems Technology include:
A. Basic Subjects

Credits

1. Calculus
2. Chemistry
3. Physics
4. Introductory biological science
5. Computer applications 4
6. Statistics or probability 3
7. Economics 3
8. Oral communication 3
B. Advanced and Applied Subjects
9. Five courses in the agricultural, biological, or environmental sciences
10. Five engineering courses at the 300 level or above; at least 9 credits in agricultural and biological engineering

> C. Electives
> Additional courses to complete college requirements
D. Total (minimum) 120
For further details on the Agricultural and Biological Engineering and Technology programs, see the deparment's undergraduate programs publication, available at 320 RileyRobb Hall, or telephone the Coordinator of Instruction for the programs, at 255-2499

## Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a convenient location on campus.
The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety. of interests and goals. Beyond a core of basic courses (suggested minimum, 12 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation. Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal. horse, feed, or meats industry. These are examples of the flexibility of programs that can be developed to meet a student's career interest related to animals.
It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Upperclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (either for credit or for Honors) or assist with teaching (for credit). The Dairy Management Fellows program and the Livestock Fellows program offer an equally
challenging but different type of experience for a highly select group of students.

## Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural. Resource, and Managerial Economics. Courses in agricultural, resource, and managerial economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics. and statistics.
Six areas of specialization are offered:
Agribusiness management is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

## Agricultural and applied economics

provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sector.

## Business management and marketing

applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. Market analysis, sales, banking, merchandising, production management, and general business management are careers for which students may prepare.
Environmental and resource economics provides training for students interested in applying economic concepts to problems of the environment and resource use. A good option for those wishing to take positions as analysts with agencies that have environmental responsibility or facing environmental regulations.
Farm business management and finance is intended for students with farm experience who are interested in farming or in preparing for work in farm management or farm finance, in such positions as Agricultural Lenders,
Extensions Specialists, or Consultants.
Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry. All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own unique set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of each individual student.

## Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.
The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division's Office for Academic Affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology; biochemistry; cell biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; neurobiology and behavior; and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

## Biometry and Statistics

Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization, and drawing conclusions based on probability statements Biometry is the application of mathematical and statistical techniques to the life sciences. Students with ability in mathematics and an interest in its applications will find this a challenging specialization.

The work of a statistician or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent

While satisfying course requirements for a specialization in statistics and biometry, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.
Students specializing in this area are required to take at least two computer science courses (e.g., Computer Science 100 and 211 ), mathematics courses (at least three semesters of calculus), and statistics courses (Biometry and Statistics 102, 200, 215, 408-409, 417, 601602 , and 607 , and Industrial and Labor Relations 310). Work experience gained through summer employment or undergradu-
ate teaching is highly recommended. Students should contact Steven J. Schwager for information

## Communication

Everyone relates to others through the process of communication. Whether these human linkages are personal or through the mass media, there is an increasing need for individuals who can help establish communication relationships and make them more efficient and effective. Individuals who are able to do this must have good communication skills themselves and must comprehend the social psychology of human communication. Students in the Department of Commu nication have the opportunity to learn both the social science underlying human communication and the most effective means of adapting written, interpersonal, audio, and visual communication to audiences. The curriculum emphasizes learning communication theory along with communication skills. With this preparation, students will be ready to meet the needs of communicating in the twenty-first century
Required courses for majors include courses in the theory of communication, understanding mass communication, public speaking, visual communication, research methods in communication, and an upper level professional writing course. Beyond these requirements students choose 18 credit hours of course work within the Department of Communication. Specific choices of courses are determined by a student's interests and guided by faculty advice.
The major prepares students for careers as communication, information, and public relations specialists in a wide variety of organizations, and for careers in information agencies in which they must work with a wide range of publics and media. Students can prepare for work in publication where they might be editors or writers in virtually any organization, perhaps preparing annual reports, editing an employee newspaper, writing sales or marketing literature, or writing news stories. Other careers open to communication majors are in human service professions, such as personnel administration, training, or sales and consulting; the major also prepares students for graduate study in communication and other social sciences.

The superior resources of Cornell's natural and social science courses may be combined with communication principles and skills to offer students the background needed for presenting scientific and technical information to the general public or communicating with scientific and technical constituencies.

In addition to the basic course requirements a concentration of at least 12 credits outside the department is required. The concentration helps orient students to a communication career in either a business, government, education, or public service organization or to a very specific profession such as agribusiness public relations or science communication Those interested in international communication or environmental communication may combine courses outside the department to provide a solid background for communciation careers in these areas.

Students are strongly encouraged to seek practical communication experience through part-time or summer employment, the
department's internship course, or the campus media. Work experience contributes to a portfolio of professional materials that is invaluable in obtaining a position in communication.

Students may apply for the department's program in Speech and Debate. Further information is available from the Department of Communication, Kennedy Hall.

## Education

The focus in the Deparment of Education is on how teaching and learning take place in school and nonschool settings, as well as on the role of education in our society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Students in the program area take a core curriculum:

- A course in general psychology (e.g., Psychology 101)
- A course in educational psychology (e.g., Education 311, 317)
- A course in the social and philosophical foundations of education (e.g., Education $271,370,378,472$ )
- A field experience (e.g., Education 420, 430,498 )
Three specializations and two teacher certification programs are available at the undergraduate level.
Agricultural extension and adult educa-
tion. Agricultural extension and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture/biotechnology in public schools, Cooperative Extension and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses on a technical area of agriculture/biotechnology, community/ economic development, natural resources, human ecology, or communication. Education courses in issues in education, teaching and learning, methodology, and instructional applications of microcomputers prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension education, or adult education. As an alternative, students may elect to major in one of the college's technical departments and co-advise to prepare in one or more of the three areas of agricultural, extension, and adult education. Further information is available from the agricultural extension and adult education coordinator, Kennedy Hall (Tel: 607-2552197).

Educational psychology. Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined.

While graduate study is still required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educational psychologists develop and/or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials for publishers; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational research organizations.

Students interested in concentrating their studies in educational psychology complete a total of 21 hours in educational psychology and related courses. Working with a faculty adviser a student may design a program in one of a variety of applied areas: Instructional Systems Design and Development; Human Relations; Measurement and Fvaluation; Individual and Social Development; or the Educational Psychology of Human Development.
Students interested in careers in educational psychology should apply for admission to the Education Department. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall.
General education. By selecting courses in the Department of Education, students can prepare for positions in areas such as counseling, youth group leadership, and the Peace Corps. Students can also prepare themselves for graduate programs in: environmental education; research methods; extension, adult and continuing education; and the social/economic/legal/philosophical foundations of education. Further information is available from the undergraduate coordinator, Kennedy Hall.

## Teacher Certification

Teacher education in agriculture. Students completing the Cornell registered program earn grade 9-12 certification to teach agricultural subjects (animal science, plant science, agricultural mechanization, and business management), introduction to occupations, occupational science, and occupational mathematics; and the introduction to technology course required for all 7-8th grade students.
A passing grade on the National Teacher Examinations (NTE) and one year of agricultural work experience are required. Provisional (initial) certification is valid for five years. The master's degree required for permanent certification is offered through graduate study at Comell.
Students may also be certified to teach selected science subjects (e.g., biology, earth science, and general science) and work as a diversified cooperative education work experience coordinator through direct application to the State Education Department. For more information contact the program coordinator, A. Berkey, at (607) 255-2197.

## Teacher Education in science and

 mathematics. Students at Comell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Science and Mathematics (TESM) is auniversity program jointly conducted by the departments of Education and Mathematics. Although TESM offers options for undergraduate and graduate study, most students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates. Undergraduate students in TESM do not normally major in education.
Students who complete their studies as undergraduates and their student teaching are normally eligible for provisional teaching certification from the State Education Department, effective for five years. Students completing the graduate program can earn the master's degree required for permanent certification.
For more information, contact the TESM
Student Support Specialist at (607) 255-9255 or the program coordinator, D. Trumbull (607) 255-3108.

## Entomology

The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis in the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of integrated pest management. Because of this diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by the student in consultation with their adviser.

## Specific Requirements

## Basic Sciences

College mathematics, including a course in calculus
A year of physics
Chemistry 103-104 or 207-208
Chemistry 253 (organic)

## General Biology

Introductory Biology
Biological Sciences 281, Genetics, or Plant Breeding 225, Plant Genetics
A choice of one: Biological Sciences 261, Principles of Ecology or
Biological Sciences 330 or 331 , Principles of Biochemistry or
Biological Sciences 378, Evolutionary Biology
Entomology
Entomology 212, Insect Biology
Entomology 322, Insect Morphology
Entomology 331, Introductory Insect Systematics
Entomology 483, Insect Physiology
It is strongly recommended that students who wish to undertake graduate training in entomology include course work beyond the minimum in their program, including enrollment in more than one of the general biology courses; i.e., ecology, biochemistry, and evolutionary biology. Students interested in pest management may include courses such as Entomology 241, Applied Entomology, Entomology/Plant Pathology 444, Integrated Pest Management, or other appropriate specialized courses.

## Food Science

The Food Science Program is designed to provide students with the knowledge, perspective, and rechnical skills necessary to ensure an adequate food supply for individuals, countries, and the world. Students choose one of five specializations and select courses that are appropriate for the elected specialization. The five specializations are: basic food science, food engineering, food processing, food industry operations and management, and intemational food development. The first three are designed to meet minimum guidelines of the Institute of Food Technologists, the professional society of U.S. food scientists. The flexibility of the food science program allows students to prepare for a variety of positions in industry, government, or education. Some of the positions and areas of work require graduate training. Opportunities for graduate study exist at a number of universities, including Cornell.
During the first two years, students are required to take the two-semester introductory courses in biology, chemistry, and physics plus introductory courses in microbiology, calculus, food science, and nutrition. During the last two years, students take courses dealing with the application of science and technology to the processing, preservation, distribution, and utilization of foods. These include the following required courses: Food Analysis, Food Engineering I, Food Safety Assurance, Food Processing, Food Chemistry, Sensory Evaluations of Foods, Food Microbiology, Food Chemistry Laboratory, and introductory statistics. Students also take courses in the social sciences and humanities to meet college distribution requirements.
Students may choose additional courses in chemistry. microbiology, or nutrition in preparation for careers in research and development; in mathematics and engineering, for careers in processing and engineering; in marketing and business management; in international agriculture; or in a variety of production courses related to specific commodities. In addition, a wide variety of courses in food science and related disciplines may be taken as electives.
Students are strongly encouraged to enhance their competence through participation in research supervised by a faculty member and or through summer internship programs sponsored by food companies. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or pay for their research work. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment. A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available for training, research, and employment.

## Landscape Architecture Program

The Landscape Architecture Program focuses on the art of landscape design as an expression of cultural values combined with natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning. The program is co-
sponsored by the colleges of Agriculture and Life Sciences and Architecture, Art, and Planning.
The program offers a course of study that prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses upon graphic communication, basic and advanced design methods, landscape history, plant materials, construction technology, theory, and professional practice. Design studios focus upon the integration of site requirements as applied to specific sites at a variety of scales. Projects range from urban design and housing to parks and garden design.
The Landscape Architecture Program offers three professional degree alternatives: a twoyear graduate curriculum for those who have undergraduate degrees in landscape architecture or architecture, a three-year graduate curriculum for those who have a four-year undergraduate degree in another field and a four-year Bachelor of Science degree. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Undergraduate studies in landscape architecture are administered through the College of Agriculture and Life Sciences. In addition, a concentration in the cultural landscape is available for non-majors.

## Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees

## Study Abroad

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates in their fall semester and is administered through Comell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Second professional degree curriculum.
The two-year Master of Landscape Architecture (M.L.A.) curriculum serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a bachelor's degree in landscape architecture or architecture from an accredited program.

The objectives of the two-year M.L.A. curriculum are to permit students to conduct research relating to landscape architecture and to provide advanced education and training to individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted considerable flexibility in establishing programs that take full advantage of the teaching and research resources of the university.
Students admitted to the two-year M.L.A curriculum are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studios, a graduate seminar, and a thesis or final master's project.

## Undergraduate Concentration for NonMajors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of five courses, two required and three elective.

## Required.

## Visual Studies (choose one):

Arch 11 Introduction to Architectural Design ( 4 cr )
Art 121 Introduction to Painting (3 cr)
Art 141 Introduction to Sculpture ( 3 cr )
Art 151 Introduction to Drawing ( 3 cr )
Art 158 Conceptual Drawing ( 3 cr )
Art 159 Life and Still-Life ( 3 cr )
Art 161 Photography I (3 cr)
DEA 101 Design I: Fundamentals ( 3 cr )
DEA 114 Drawing ( 3 cr )
LA 141 Freehand Drawing ( 3 cr )

## The Landscape

+LA 382 The American Landscape ( 3 cr )
Electives (choose three):
ANTH 211 Nature and Culture ( 3 cr )
+LA 262 Urban Archeology ( 3 cr )
+LA 360 Pre-Industrial Cities and Towns of North America ( 3 cr )
+LA 398 Archeology Fieldwork: New York State ( 5 cr , summer only)
LA *** American Indian Landscape, Architecture and Planning ( 3 cr )
LA 521 History of American Landscape Architecture ( 3 cr )
LA 569 Archeology in Site Design and Planning ( 3 cr )
+Distribution Elective

## Natural Resources

The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both natural
sciences and human organizations involved with resource management. Students are provided with an opportunity to understand the scientific, ethical, and societal basis for the protection and management of renewable resources through the application of ecological principles and knowledge of social needs.

## Required Core Curriculum

Students who desire to graduate with a specialization in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the department, which, as their presentation suggests (Groups A-D), also fulfill this college's course distribution requirements described on page 30.

## Group A - Physical Sciences Total Hours

Mathematics - 2 courses $\quad 6-8$
Chemistry - 2 courses 7-8

## Group B - Biological Sciences

Introductory biology - 8 cr . hours
General ecology - 1 course

## Group C - Social Sciences

3 credits in addition to
3 credits in economics

## Humanities

6 credits in addition to a course in "normative" ethics (e.g., NTRES 407, or PHIL 241, 246, or 247)

## Group D - Written and Oral Expression

Freshmen Writing Seminars - 2 courses
Oral communications - 1 course

## Courses outside the Distribution Groups

Statistics - 1 course
Computer applications or programming - 1 course
The Core Curriculum's second portion is composed entirely of courses offered by the Department of Natural Resources; a minimum of 19 hours in department courses is required.

## YEAR 1

Total Hours
One of 2 introductory courses:
NTRES 100 Principles of Conservation (Fall, 3 cr.)
NTRES 201 Environmental Conservation (Spr., 3 cr .)

## YEAR 2

both courses listed:
NTRES 210 Introductory Field Biology (Fall, 4 cr .)
NTRES 253 Integrated Resource and Environmental Management (Spr., 3 cr.) 3

## YEARS 3 AND 4

At least 3 of the following courses, with one from each group

## Ecology

 3-8NTRES 301 Forest Ecology (Fall, 3 cr.)
NTRES 304 Wildlife Ecology (Spr., 3 cr.)
NTRES 418 Wetland Ecology and
Management (Fall, 3 cr.)
NTRES 440 Fishery Science
(Fall, alt. yrs., 3 cr .)

NTRES 442 Techniques in Fishery Science (Fall, 5 cr .)

## Management

3-6
NTRES 303 Woodlot Management (Fall, 3 cr .)
NTRES 308 Natural Resources Management (Fall, 3 cr .)
NTRES 401 Envir. and Nat. Res. Policies (Fall or spring, 3 or 4 cr..)
NTRES 402 Nat. Res. Policy, Planning \& Politics (Spr., 3 cr.)
NTRES 410 Principles of Wildlife Management (Spr., 3 cr.)
NTRES 438 Fishery Management (Spr., alt. yrs., 3 cr.)
Students pursuing this specialization have remaining approximately 40 credit hours available to develop one or more concentrations of their choice within or outside this field.
Students who wish to do so may specialize further in wildlife science, forest science, fishery and aquatic science, or natural resource policy and management.
Opportunities for field-oriented studies are available at Comell's nearby Arnot Teaching and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as at numerous natural areas near campus.
Students should seek relevant work experi-
ence to complement their academic studies.

## Nutrition, Food, and Agriculture

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.
The program in nutrition, food, and agriculture was established in 1990 to provide students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships between human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.
Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional

Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, and the life sciences.
All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.
Many students engage in laboratory or field research with a faculty member for academic credit or, in some cases, as employment. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, inclustries, or community agencies are possible.
The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in Martha Van Rensselaer Hall is used by students for study and small group discussion. The center contains class materials, audiovisual aids and supplementary books and periodicals for independent study and special projects.
For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

## Plant Sciences

Plant sciences students can specialize in plant biology, plant breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, and fruit and vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs beginning as freshmen when they enter college. Others may prefer to start in the general plant sciences curriculum and specialize after they have had a chance to explore the program offerings in the plant sciences.
Plant sciences is a multidepartmental program area, sponsored by the Department of Plant Breeding in Emerson Hall, and the departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, and Plant Pathology, all located in the Plant Science Building.

General plant science is intended for students whose interest in studying plants has not yet centered on any one of the specializations within the area. Students may continue with this option throughout their undergraduate years. particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as extension agents, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in agronomy and biological sciences. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, extension, statistics, international agriculture, food science, or agricultural economics.

Undergraduates are encouraged to obtain practical experience, which may involve research under the direction of a faculty member or work in a commercial industry, or research institute, a botanical garden or arboretum, or nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

Floriculture and ornamental horticulture applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants for both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, botanical gardens and arboreta, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:
HORT 101, Introduction to Horticultural Science
HORT 102, General Horticulture
HORT 230, Woody Plant Materials
HORT 300 or 301, Garden and Interior Plants I and II
HORT 400, Principles of Plant Propagation BIOPL 241, Plant Biology (Introductory Botany)
BIOPL 242, Plant Physiology (lecture) BIOPL 244, Plant Physiology (laboratory) SCAS 260, Introduction to Soil Science ENTOM 241, Applied Entomology PL PA 301, Introductory Plant Pathology
Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.
With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape
architecture courses may be included in this 12 -credit requirement: LA $142,311,312,480$, 490, 491. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture, or they may study generally across the specialization concentration in floriculture prepares students for careers in management of the production of florist and greenhouse crop production, crops in controlled environment agriculture, and wholesale- and retail-florist marketing, whereas specialization in landscape horticulture trains students for careers in nursery-crop production, turfgrass management, landscape contracting and service, retail- and wholesale-marketing of nursery products and services, botanical garden and arboretum management, urban horticulture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study in horticultural science may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisers and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also is recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology. entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed sciences. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged. Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.
Questions concerning the undergraduate curriculum, advising, and related manners should be addressed to Professor Carl F. Gortzig, Unclergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 23 Plant Science Building, Ithaca, New York 14853-5908 (telephone: 607-2551787).

The department's office is 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kenneth Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, landscape architecture studios on the fourth floor of Roberts Hall (entrance Kennedy Hall), and freehand drawing studios in Mann Library.

## AGRICULTURE AND LIFE SCIENCES - 1994-1995

Plant biology provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology and evolution, and statistics. A core of courses, including mathematics, plant biology and physiology, and cytology, is strongly suggested. However, different specialties within plant biology afford a flexible curriculum.
Plant breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations, for positions in seed analysis, regulation, and quality control, and for work in biotechnology laboratories

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding and plant genetics; genetics, cytology, and cytogenetics; mathematics (calculus) and statistics; organic chemistry and biochemistry: plant anatomy, ecology,
taxonomy, and physiology; crop production; plant pathology, and entomology
Plant pathology is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, this concentration also prepares students for careers as technical representatives for agribusiness, as cooperative extension agents, as state or federal regulatory agents, or as research technicians in laboratories of plant pathology, mycology, microbiology, and biotechnology
Course courses include chemistry, mathematics, introductory biology. botany, plant physiology, and introductory plant pathology Additional plant pathology courses and other relevant courses from other fields are selected according to the particular interests of the student. Options include entomology, plant breeding, pomology, vegetable crops,
floriculture and ornamental horticulture, and soil, crop, and atmospheric sciences.

Plant protection is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agribusiness, the agrichemical industry, cooperative extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in
entomology, plant pathology, or weed science.
The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended
In addition, a number of other subjects pertinent to plant protection are recommended, depending upon the student's interests: agricultural economics, agricultural and biological engineering, soil, crop, and atmospheric sciences, biochemistry, communication, pathology and entomology, general physics, genetics, meteorology, mycology, pesticides in the environment, and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency
Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops New York is a national leader in fruit production. An on-farm value of over $\$ 155$ million generates an estimated $\$ 620$ million for the state's economy
Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.
Vegetable crops is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegerables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, production, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and postharvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology. plant breeding, entomology, plant pathology, weed science, ecology, soil, crop. and atmospheric sciences, nutritional science. agricultural economics, international agriculture, and agricultural and biological engineering
The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater
awareness of environmental and health issues is driving a change toward farming practices that depend less upon agricultural chemicals than in the recent past. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

## Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.
Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.
Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty
members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties with the technical fields in the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in these other departments and programs, thereby rounding out their educations by acquiring different perspectives.

The courses offered in rural sociology can be grouped in three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in Rural Sociology are required to take five core courses: an introductory course ( R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

## The focus area in development sociology

 provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized.These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in
nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.
Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.
Courses in the population, environment, and society focus area provide an under standing of (1) the causes and consequences of the major components of population change-fertility, mortality, and migration (2) the major patterns of population distribution and population characteristics in the United States and the developing world,
(3) the relationships between social structure and the biophysical environment, (4) the relationships between population change and natural resource utilization in development, and (5) impacts of public policy interventions on population size, growth and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.

Stuclents are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.
Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).
Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

## Soil, Crop, and Atmospheric Sciences

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric science, agronomy, crop science, soil science, and weed science. Employment opportunities are increased with practical experience, which is emphasized in the laboratories of our beginning courses. For students wishing additional credentials, preparation for professional certification is provided in all five specializations

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere. All students are required to complete a minimum of five semesters of calculus; two semesters of physics; a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.
Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career
opportunities after completion of the B.S degree, including agricultural business, extension service work, and farming. Graduate school can also follow a well planned program. The student should take at least 12 credits of crops and 12 credits of soils and design the remainder of his or her curriculum to meet specific interests and goals. Some students pursue a double major in agronomy and international agriculture

Crop science is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's
degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

Soil science is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.
Weed science is that branch of pest management which emphasizes the principles and practice of weed control. The scientific basis for mechanical, cultural, chemical, and biological control procedures is considered. Plant physiology, organic chemistry, biochemistry, soil science, and plant taxonomy are required in addition to twelve credits in weed science and plant protection. The specialization is offered cooperatively by the departments of Soil, Crop, and Atmospheric Sciences, Floriculture and Ornamental Horticulture, and Vegetable Crops so that a variety of managed plant systems may be studied.

## Special Programs in Agriculture and Life Sciences

Some students are interested in pursuing a general education in the agricultural sciences. Others are uncertain about career objectives in agriculture and the life sciences. The opportunity to develop an independent major in general studies in agriculture and the life sciences is available for such students. In consultation with a faculty adviser, they may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one or several academic units of the university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fastgrowing occupations require the broad perspective, the scientific and technical skills, the attitudes, and the analytical ability that a general education fosters. A course of study for a special program must be planned with
and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Office of Student Services, 140 Roberts Hall.
General studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college-animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected in those and other areas of individual interest or career aspiration.
International Agriculture provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socio-economic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and with various world areas for which study programs exist. Competence in a foreign language is required.
In addition to the college distribution requirement of 36 credits, students majoring in International Agriculture must take a minimum of 30 credits. A minimum of 7 credits in International Agriculture and 8 credits (or equivalent competence) in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to acquaint students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

## DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences.
Descriptions of courses, both undergraduate and graduate, are given by department, arranged in alphabetical order.
Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

## NONDEPARTMENTAL COURSES

## ALS 127 Introduction to Farm Techniques

127, fall and spring. 1 credit each semester. Prerequisite: permission of instructor. S-U grades only. Limited to 8 students per section.

T or W, 1:25-4:30. Class assembles in the lobloy of Roberts Hall for transport to various facilities. G. Tennant, staff.
Practical instruction in the basic skills of farming and field research. Includes safe tractor and equipment operation and maintenance; harvesting and planting crops; caring for and handling dairy and beef animals, sheep, and poultry; and milking by machine and by hand. General orientation in the day-to-day procedures of farm operation. Field trips to area farms and agribusinesses will provide knowledge of farmers' skills, problems, and way of life.

## ALS 400 Internship

Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.

## Staff.

Students may register only for internships approved by the College Internship Committee. Currently, the opportunities are available in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor, stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

## ALS 500 Politics and Policy: Theory, Research, and Practice (also Government 500, and HSS 404)

Students in the College of Agriculture and Life Sciences must register for ALS 500.
S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the Cornell-in-Washington program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate so as to provide students with a strategy and framework for integrating classroom-based learnings, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 131 Sage Hall.

## ALS 661 Environmental Policy (also

 Biological Sciences 661 and Biology and Society 461)Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an " $\mathrm{R}^{\text {" grade is given at the end of the fall term.) }}$ Limited to 12 students. Prerequisite: permission of instructor.

Sem R 2:30-4:30 p.m. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing
a scientific report for publication in Science or BioScience.

## Related Courses in Another Department

Agriculture, Science and Society (HIST 233)
Seminar in the History of the Agricultural Sciences (HIST 687)

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

R. B. Furry, chair; L. D. Albright,<br>D. J. Aneshansley, J. A. Bartsch, S. G. Capps,<br>T. J. Cook, J. R. Cooke, A. K. Datta,<br>R. C. Derksen, K. G. Gebremedhin,<br>W. W. Gunkel, D. A. Haith, P. E. Hillman,<br>J. I3. Hunter, W. W. Irish, L. H. Irwin,<br>W. J. Jewell, H. A. Longhouse,<br>D. C. Ludington, J.-Y. Parlange, R. E. Pitt,<br>G. E. Rehkugler, T. S. Steenhuis,<br>M. B. Timmons, L. P. Walker, M. F. Walter

## ABEN 102 Introduction to

 Microcomputer ApplicationsFall. 3 credits. S-U grades optional. Each lab section limited to 16 students. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance to the course.

Lecs, T R 10:10 or 12:20; lab M 1:25-4:25 or 7:30-10:30 p.m., or T 1:25-4:25, or W
1:25-4:25 or 7:30-10:30 p.m., or R 1:25-
4:25. 1 evening prelim. P. E. Hillman. Introduction to application packages on microcomputers. A laboratory, using the Macintosh, provides hands-on experience with word processing, spreadsheets, and clatabase managers. These packages and others such as desktop publishing, telecommunications, statistics, and presentation graphics are discussed and demonstrated in the lecture, as well as computer hardware and DOS.

## ABEN 104 Introduction to Programming

 using Pascal and FORTRANSpring. 4 credits. Each lab section limited to 20 students. S-U grades optional.

Lecs, T R 11:15; lab), T or W 12:20-2:15.

## P. E. Hillman.

An introductory course in computer programming using microcomputers to handle data. Topics include preparing and processing programs in Pascal and FORTRAN. Students are expected to spend 5 to 8 hours outside their scheduled laboratory periods to complete problem sets. No prior knowledge of computers or computer language is necessary

## ABEN 110 Introduction to Metal

 Fabrication TechniquesSpring. 2 credits. Each lab limited to 18 students.

Lec, R 9:05; lab, M or T or R 1:25-4:25, or M 7-10 p.m. T. J. Cook.
Emphasis on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

## ABEN 132 Introduction to Wood Construction

Fall. 2 credits, Each lab limited to 15 students

Lec, T 9:05; lab, T or W or R 1:25-4:25, or M 7-10 p.m. T. J. Cook.
Principles and practice of wood construction. To include site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student will plan and construct an approved carpentry project.

ABEN 151 Introduction to Computing Fall. 4 credits.

Lecs, M W F 11:15; lab, W or R 12:20-2:20 or $2: 30-4: 30$, or $F 1: 25-3: 25$. Each lab section limited to 22 students.
D. J. Aneshansley.

An introduction to computer programming and concepts of problem analysis, algorithm development, and clata structure in an engineering context. The structured programming language, Pascal, is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

ABEN 153 Engineering Drawing
Fall. 2 credits. Limited to 30 students ( 15 in each lab).

Lec, M 9:05; lab, T or W 1:25-4:25.
H. A. Longhouse.

Designed to promote an understanding of engineering universal graphic language. The lectures and laboratories develop working knowledge of drawing conventions, drafting techniques, and their application to machine and pictorial drawing problems. The course will involve both instrument and Autocad computer drawings.

ABEN 200 Undergraduate Seminar Spring. 1 credit. S-U grades optional. Lec, T 1:25. K. G. Gebremedhin A forum to discuss the contemporary and future role of agricultural and biological engineering in society. A required course for freshmen majors in Agricultural and Biological Engineering academic programs. A series of seminars will be given by practicing engineers, Cornell faculty members, and students. Students are expected to develop written career statements and select future courses to meet their career goals.

ABEN 221 Plane Surveying
Fall. 3 credits. S-U grades optional. Lecs, M W 12:20. lab, M 1:25-4:25 H. A. Longhouse.

Principles and practice of measurement of distance, elevation, and direction. Use and care of equipment is stressed during field problems related to mapping, engineering design, and construction. Other topics include surveying specifications, error analysis, and standards of accuracy

## ABEN 250 Engineering Applications in

 Biological SystemsFall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year

Lecs, M W F 12:20. L. P. Walker.
Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental
problems, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

## ABEN 301 Introduction to Energy

 TechnologySpring. 3 credits. Prerequisite: college physics. S-U grades optional.

Lecs, M W F 10:10. D. C. Ludington Basic concepts of energy; traditional sources, conversion processes to provide usable forms of energy and environmental impact; concepts of energy conservation and reducing environmental impact; alternate sources of energy and their potential.

## ABEN 305 Principles of Navigation [also

 Naval Science 301)Fall. 4 credits. Lecture limited to 34 students Each lab limited to 17 students.

Lecs, M W F 8:00. Lab, R 8:00 or R 9:05.
C. D. Myers.

An introduction to the fundamentals of marine navigation, emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides, and currents. Electronic navigation systems are also briefly discussed.

## ABEN 310 Advanced Metal Fabrication

 TechniquesSpring. 1 credit ( 2 -credit option available) Prerequisite: ABEN 110 or permission of instructor.

Lab F 1:25-4:30. T. J. Cook.
Principles and practices extending beyond the scope of ABEN 110. To include out-ofposition, high carbon steel and cast iron welding. Soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals. Planning, development, and fabrication of a metal construction project for the 2 credit option.

ABEN 321 Soil and Water Management
Spring. 2 credits. S-U grades optional. Concurrent registration in SCAS 321 required. Lecs, M W F 9:05; disc-lab, M 1:25-4:25.
M. F. Walter, T. W. Scott.

An interdisciplinary course intended to introduce students to the general principles of soil and water interaction and to the effects of human intervention in these processes
Aspects of soil and water management, including hydrology, soil erosion, irrigation, drainage, and water quality are examined Case studies from both the United States and the tropics are used to illustrate basic principles

## ABEN 331 Environmental Control for Agricultural Production Systems

Fall. 3 credits. S-U grades optional.
Lecs, M W F 11:15. K. G. Gebremedhin A study of environmental requirements, ventilation design, and control of agricultural production systems (dairy, swine, poultry, and fruit and vegetable storage facilities). Animal physiology and homeothermy, material handling, waste management, alternate energy sources on the farm, farmstead planning and layout, and engineering economic analysis of systems and alternatives.

ABEN 350 Transport Principles
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible)

Lecs, M W F 11:15. J. B. Hunter.
Integration of heat and mass transfer combined with reaction kinetics in the context of agricultural and biological systems Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant and animal biology, the environment (soil/water/ air), and food processing.

## ABEN 367 Introduction to Biological Engineering

Spring, 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional.

Lecs, T R 10:10; lab, R or F 1:25-4:25.

## J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, neuromuscular electrical signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

## ABEN 371 Hydrology and the

 Environment (also Soil, Crop, and Atmospheric Sciences 371, and Geological Sciences 204)Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lecs, T R 9:05; lab, F 1:25-3:20.
T. S. Steenhuis, J.-Y. Parlange,
P. C. Baveye, L. M. Cathles.

Introduction to hydrology as a description of the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering floods, and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

## ABEN 401 Career Development In Agricultural and Biological Engineering

Fall. 1 credit. Limited to seniors. S-U grades only.

Lec, M 12:20. G. E. Rehkugler A career development seminar for majors in the field of agricultural and biological engineering. Career opportunities in corporations, independent businesses, consulting, and public service. Professional ism, ethics, public policy and personal and corporate management issues are discussed

ABEN 435 Principles of Aquaculture Spring. 3 credits. Prerequisite: junior standing and above.

Lecs, T R 1:25-2:15, lab, R 2:30-4:25.
M. B. Timmons, W. D. Youngs,
C. A. Bisogni, G. A. German,
G. L. Rumsey, P. R. Bowser,
J. M. Regenstein, J. Meade, and
G. H. Ketola.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to
build upon the undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences. A term project is required.

## ABEN 450 Instrument Design: Signal Processing and Data Acquisition

Fall. 3 credits. Prerequisites: Linear Differential Equations, physics or electrical science, computer programming.

Lecs, M W (also F first 4 weeks) 9:05; lab
to be arranged. D. J. Aneshansley. An introduction to static and dynamic characteristics of instruments, electronic instruments, digital and analog signal conditioning circuits and techniques, data acquisition and instrument control with personal computers and micro-controllers, and computer data analysis. Biological and agricultural examples of instrument problems and designs are used. A final design project is required.

## ABEN 451 Biomass Conversion

 Processes for Energy and Chemicals Spring. 3 credits. Prerequisites: ABEN 250 and 350, MATH 294, Thermodynamics (coregistration permissible), and CHEM 211.Lecs, M W F 9:05. L. P. Walker. A variety of physical and biological processes are available for converting plants and other biomass resources into fuels, industrial chemicals, and foods. The design of these processes is accomplished through fusing concepts from biochemistry, microbiology, and plant biology with the concepts and methods of engineering. There are five major components to this course: plants as biochemical resources, heat and mass transfer, enzyme catalysis, fermentation kinetics, and biological filtration with plants. The last four components are concluded with case studies that demonstrate how the scientific and engineering concepts are used to design a biomass conversion process.

## ABEN 454 Physiological Engineering

Fall. 3 credits. Prerequisites: Introductory biology, computer programming. Corequisite: fluid mechanics.

Lecs, T R 12:20; secs, T or R 1:25-4:25. R. E. Pitt.

Engineering analysis and design in the physiology of animals and humans. Topics include osmometric behavior of cells, cardiovascular control models, mechanical operation of the hear, sensory ecology, neural transmission, EEGs, physiology of sight, bioacoustics, respiration, whole-animal models, and the fluid mechanics of flying and swimming. Laboratories involve experiments, computer applications, field trips, and guest lectures.

## ABEN 466 Food Process Engineering: A

 Transport Phenomena Approach Spring. 3 credits. Prerequisite: courses in either fluid mechanics and heat transfer or unit operations in food processing.Lecs, T R 9:05; disc-lab, F 1:25-3:25.
A. K. Datta.

A unified transport phenomena based quantitative engineering approach to basic and advanced food processing concepts including sterilization, concentration, drying, freezing, separation, extrusion, etc. Considerable emphasis on microwave heating applications to these processes.

## ABEN 467 Bioprocessing Applications in

 AgricultureFall. 4 credits. S-U grades optional. Prerequisites: BIOBM 231, college biology and calculus, one year each; ABEN 250 or ENGR 219, or senior standing in life sciences. May not be taken for credit after CHEME 643.

Lecs, T R 10:10-12. J. B. Hunter. An introduction to microbial and enzymatic process technology for engineers and life scientists. A substantial introduction to process engineering is illustrated by case studies of food and agricultural bioprocesses. Emphasis on engineering analysis and design. Suitable for both engineers and life scientists seeking careers in the biotechnology industry.
ABEN 471 Geohydrology (also Geology 445 and Civil and Environmental Engineering 431. Students enrolled in the statutory colleges must enroll in Agricultural and Biological Engineering 471.)
Fall. 3 credits. Prerequisites: MATH 294 and ENGR 202.

Lecs, M W 10:10 and F 2:30-4:30.
T. S. Steenhuis, J.-Y. Parlange, A. L. Bloom,
W. H. Brutsaert, L. M. Cathles.

An intermediate course in surface and groundwater flow and related design factors. Includes principles of fluid flow, the hydrologic cycle, natural channel dynamics and sediment transport, description and behavior of natural aquifers, groundwater hydraulics, soil water, and solute transport.

## ABEN 473 Watershed Engineering

Fall. 3 credits. Prerequisite: Fluid Mechanics or Hydrology.

Lecs, T R 9:05, disc, R 1:25. M. F. Walter. Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for soil erosion control, flond damage control, earthen dams, ponds, moisture conservation, drainage, irrigation, and water supply.
ABEN 474 Drainage and Irrigation Design Spring. 3 credits. Prerequisites: Fluid Mechanics or Hydrology.

Lecs, T R 11:15 and disc, F 8:00.
M. F. Walter.

This course will focus on design of drainage and irrigation systems for agriculture and nonagricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student.

## ABEN 475 Environmental Systems

 AnalysisFall. 3 credits. Prerequisites: computer programming and one year of calculus.

Lecs, M W F 1:25. D. A. Haith. Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, dynamic programming, and separable programming) to evaluate management altematives. Applications include pollution control and resource management problems.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 year of calculus and physics; 1 semester of chemistry. Lecs, M W F 1:25. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; waste collection, storage, and transport; sanitary landfills; incineration; resource (energy and materials) recovery; composting; air and water pollution impacts; economic and social factors.

## ABEN 477 Treatment and Disposal of Agricultural Wastes

Spring. 3 credits. Prerequisites: One environmental science course and at least junior-level standing; or permission of instructor.

Lecs, T R 2:30-3:45. W. J. Jewell. Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing.

## ABEN 481 Design of Wood Structures

Spring. 3 credits. Prerequisite: ENG 202.
Lecs, M W F 10:10. K. G. Gebremedhin. Computer-aided and design code manual procedures of engineering wood structures. Estimation of design loads, wood stress properties, design of columns, beams, frames, trusses, post-frame buildings, shear walls, horizontal diaphragms, connections, and special wood (glue-laminated) structural systems.
ABEN 482 Bioenvironmental Engineering Spring. 3 credits. Prerequisite: ABEN 250 and 350 , or equivalent.

Lecs, T R 11:15-12:30. L. D. Albright. Analysis and design of structures to modify the thermal and aerial environment of animals and plants. Environmental requirements of animals and plants, and the design of buildings to act as buffers between biological systems and climate. Heat flow, air flow, psychrometrics, energy balances, thermal biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena.
ABEN 491 Highway Engineering (also Civil and Environmental Engineering 362)

Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).

Lec, F 1:25-4:25; lab, M 1:25-4:25.
L. H. Irwin.

An introduction to highway engineering with an emphasis on design. Students will work in teams to apply the current standards and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and public safety, hydrology and drainage design, highway materials, pavement design, and maintenance.

ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved
by the department curriculum committee, and the same course will not be offered more than twice under this number.

## ABEN 496 Senior Design in Agricultural and Biological Engineering

Spring. 3 credits. Prerequisite: senior standing in ABEN engineering program or instructor's permission.

Lecs, T R 10:10. Disc, to be arranged S. G. Capps.

Capstone design course for senior level students. Topics and skills discussed will include time and team management, salesmanship and motivation, design constraints, design, problem definition and specification, project scheduling, materials selection, cost estimation, and design evaluation. Team format design projects will be required; mentorship of projects will be provided by faculty.

## ABEN 497 Individual Study in Agricultural and Biological Engineering

Fall and spring. $1-4$ credits. S-U option Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall)

Staff.
Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

## ABEN 498 Undergraduate Teaching

 Fall and spring. 1-3 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall)Staff.
The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

## ABEN 499 Undergraduate Research

Fall and spring. 1-3 credits. Prerequisites: normally reserved for seniors in upper twofifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall).

Staff.
Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

ABEN 501-502 M.P.S. Project
Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field

Hours to be arranged. Staff
A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

## ABEN 551-552 Agricultural and

 Biological Engineering Design ProjectFall and spring. 3-6 credits. Prerequisite: admission to the M.Eng. (Agr.) degree program.

Hours to be arranged. J. B. Hunter and staff.
Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s)

ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: Linear differential equations, introductory chemistry and introductory physics, or permission of the instructor.

Lecs, T R 12:20; lab to be arranged.
D. J. Aneshansley

Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.

## ABEN 655 Thermodynamics and Its Applications

Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent.

Lecs, M W F 12:20. J.-Y. Parlange Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

## ABEN 665 Engineering Properties of

 Foods (also Food Science 665) Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. Offered alternate years.Lecs, T R 12:20. S. S. H. Rizvi, A. K. Datta, and S. J. Mulvaney.
Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of the measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

## ABEN 671 Analysis of the Flow of Water

 and Chemicals in SoilsFall. 3 credits. Prerequisites: two calculus courses and fluid mechanics.

Lecs, T R 3:35-4:50. J.-Y. Parlange,
T. S. Steenhuis.

The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and
computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 633-a complementary, but not identical, course.

ABEN 672 Drainage
Spring. 4 credits. Prerequisites: ABEN 471 and two calculus courses. S-U grades optional. Offered alternate years. Not offered 1995-96.

Lecs, M W F 10:10; lab, T 1:25-4:25. T. S. Steenhuis.

Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measuring soil parameters and for actual drainage design.

## ABEN 673 Irrigation Systems

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years.

Lecs, M W F 10:10. M. F. Walter. An introduction with a systems perspective to the design and implementation of irrigation. Topics include systems planning and appraisal, irrigation structures, equipment, and measuring devices, water distribution, and scheduling. The course will include design for both domestic and Third World systems. Case studies will be used to help students develop a broad understanding of irrigation systems.

## ABEN 677 Treatment and Disposal of Agricultural Wastes

Spring. 3 credits. Prerequisite: permission of instructor.

Lecs, T R 2:30-3:45. W. J. Jewell. Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are used in design problems with animal wastes, food production, and food and fiber processing. A semester-long design project is required.

## ABEN 678 Nonpoint Source Models

Spring. 3 credits. Prerequisites: computer programming and calculus.

Lecs, M W F 2:30. D. A. Haith. Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include urban and rural runoff, lake eutrophication, groundwater waste loadings from land disposal sites, pesticides and nutrients in agricultural drainage, irrigation return flows, and watershed stream flow and sediment yield.

## ABEN 685 Biological Engineering

 AnalysisSpring. 4 credits. Prerequisite: T\&AM 310 or permission of instructor.

Lecs, M W F 11:15. J. R. Cooke. Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of
results. The student's knowledge of fundamental principles is used extensively.

ABEN 692 Pavement Engineering (also Civil and Environmental Engineering 643)

Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering.

Lec, F 1:25-4:25; lab, M 1:25-4:25.
L. H. Irwin

Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements, computer-based methods for pavement design, structural evaluation of pavements, and pavement systems management. Topics of discussion will include bituminous mixture design; base courses; soil stabilization methods; seal-coat design; design of flexible and rigid pavements; pavement design for frost conditions; and pavement evaluation using nondestructive test methods. Laboratory will provide a case study of pavement systems management

## ABEN 694 Special Topics in Agricultural and Biological Engineering <br> Fall or spring. 4 credits maximum.

S-U grades optional.
Hours to be arranged. Staff.
The department teachers "trial" courses under this number. Offerings vary by semester, and will advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number

## ABEN 700 General Seminar

Fall. No credit. S-U grades only.
M, hours to be arranged. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

## ABEN 701 Special Topics in Agricultural

 and Biological EngineeringFall or spring. $1-6$ credits. Prerequisite: permission of instructor. S-U grades optional.

Hours to be arranged. Staff.
Topics are arranged by the staff at the
beginning of the term
ABEN 750 Orientation for Research
Fall. 1 credit. Limited to newly joining graduate students. S-U grades only. Lecs, first 7 weeks, $M 3: 35$; remainder to be arranged
An introduction to departmental research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

## ABEN 754 Sociotechnical Aspects of Sustainable Watersheds (also Agricultural Economica 754, and Government 644)

Spring. 2-3 credits. S-U grades optional
Hours to be arranged. M. Walter,
R. Barker, N. Uphoff

Examines sustainable agriculture in the context of watersheds and its relation to agricultural development. Emphasis on social processes within water and soil management systems and interactions with social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated and nonirrigated agriculture in developing countries.

ABEN 761 Power and Machinery Seminar Spring. 1 credit. Limited to graduate students. Prerequisite: permission of instructor. S-U grades only.

Hours to be arranged. Staff.
Study and discussions of research and new developments in agricultural power and machinery.
ABEN 771 Soil and Water Engineering Seminar
Fall and spring. $1-3$ credits. Prerequisite: graduate status or permission of instructor. S-U grades optional

Hours to be arranged. T. S. Steenhuis,
M. F. Walter, J.-Y. Parlange.

Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality

## ABEN 775 Agricultural Waste

 Management SeminarSpring. 1 credit. Limited to graduate students Prerequisite: permission of instructor. S-U grades only.

Hours to be arranged. Staff. Management of agricultural wastes, with emphasis on physical, chemical, biological, and economic factors affecting waste production, treatment and handling, utilization, and disposal.

## ABEN 781 Structures and Related Topics

 SeminarSpring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only

Disc to be arranged. K. G. Gebremedhin. Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations.

## ABEN 785 Biological Engineering

 SeminarSpring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

Disc to be arranged. J. R. Cooke.
The interactions of engineering and biology, especially the environmental aspects of plant. animal, and human physiology, are examined in order to improve communication between engineers and biologists.

## AGRICULTURAL, RESOURCE, AND MANAGERIAL ECONOMICS

A. M. Novakovic, chair; D. J. Allee,
B. L. Anderson, R. D. Aplin, R. Barker, N. L. Bills, R. N. Boisvert, J. Brake, K. Bryant, D. L. Call, G. L. Casler, L. D. Chapman, R. D. Christy, G. J. Conneman, J. Conrad, H. de Gorter, E. E. Figueroa, O. D. Forker, G. A. German, D. A. Grossman, M. Hubbert, H. M. Kaiser, R. J. Kalter, W. A. Knoblauch, S. C. Kyle, E. L. LaDue, D. Lee, W. H. Lesser, E. W. McLaughlin, R. A. Milligan, T. D. Mount, G. L. Poe, T. T. Poleman, J. Pratt, C. Ranney, W. D. Schulze, D. G. Sisler, D. Streeter, L. Tauer, E. Thorbecke, W. G. Tomek, C. van Es, G. B. White, L. S. Willett

## Courses by Subject

Farm management, finance, and production economics: $302,402,403,404,405,406,407$, $408,409,605,608,708$
Statistics, quantitative methods, and price analysis: $310,410,411,412,413,415,419$, $710,711,712,713,717$

Business management, law, and accounting 220, 221, 320, 321, 323, 324, 325, 422, 424. $425,426,427,428,429$
Public policy: 430, 431, 432, 630, 730, 731
Marketing and food distribution: 240, 340, $342,346,347,443,446,447,448,449,640$, 641, 740, 741
Resource economics: $250,450,652,750,751$, 754
Economics of development: $464,660,665$, 763
General, contemporary issues, research, and other: $100,380,494,497,498,499,694,698$, 699, 700

## AG EC 100 Introduction to Global Economic Issues

Fall. 3 credits.
Lecs, M W F 11:15. 2 evening prelims. W. D. Schulze

The economics and geography of world agriculture, providing a basis for understanding past development and future changes. Elementary economic principles, historical development, physical geography, and population growth are studied in their relation to agricultural development and the economic problems of farmers. Where possible, current domestic and foreign agricultural issues are used to illustrate principles.

## AG EC 220 Introduction to Business Management

Spring. 3 credits.
Lecs, M W F 10:10 or 11:15; disc, M
2:30-4:25 or 7:30-9:25 p.m. (2 secs); T 8-9:55, or 2:30-4:25; W 10:10-12:05, $12: 20-2: 15,2: 30-4: 25,7: 30-9: 25$ p.m. (2 secs); R 8-9:55 or 2:30-4:25. In weeks when discs are held, there will be no $W$ lecture. 2 evening prelims. R. D. Aplin An overview of management and business. Provides exposure to key management functions, a firm's internal and external environments, business ethics, forms of business ownership, some key concepts and tools in human resource management, financial management and marketing and important current issues such as quality, global competition, and corporate governance Several guest executives.

## AG EC 221 Financial Accounting

Spring. 3 credits. Not open to freshmen. Lecs, M F 11:15 or $12: 20$; sec, T 10:1012:05 (2 secs), 12:20-2:15, or 2:30-4:25; W 10:10-12:05 ( 2 secs), 12:20-2:15 ( 2 secs), $2: 30-4: 25$ ( 2 secs), or $7-9$ p.m. R 10:10-12:05, 12:20-2:15, or 2:30-4:25. 2 evening prelims and a comprehensive final. J. Dentes.
A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies.

## AG EC 240 Marketing

Fall. 3 credits
Lecs, M W F 10:10; discs, M 2:30-4:00,
T 12:20-1:50 or $2: 30-4: 00$ ( 2 secs), W
2:30-4:00 (2 secs), R 12:20-1:50 ( 2 secs) or
2:30-4:00 ( 2 secs ), or F 10:10-11:40. In
weeks discs are held, there will be no $F$ lecture. E. W. McLaughlin This course provides a broad introduction to the fundamentals of marketing. We will explore the components of an organization's strategic marketing program, including how to price, promote, and distribute goods, services ideas, people, and places. We will examine specifically the central role played by changing consumers; our primary emphasis will be placed on consumer goods industries Although examples will frequently be drawn from the food and agricultural system, the principles and concepts from this course will apply equally well to the marketing of goods and services in all sectors of the economy Case studies, industry guest lectures, and current marketing applications from various companies will be presented and analyzed.

## AG EC 250 Natural Resource and Environmental Economics

Spring. 3 credits. Prerequisite: ECON 101 or equivalent

Lecs, T R 9:05-10:35 or 2:30-4:00
1 evening prelim. D. Chapman. An introduction to the concepts and methods of analysis in the public and private use of resources, particularly valuation of environmental resources, benefit-cost analysis, and discounting. Major current economic problems in global warming, endangered species protection, forestry, acid rain, energy use, and world petroleum resources. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

AG EC 302 Farm Business Management Fall. 4 credits. Not open to freshmen. This course is a prerequisite for AG EC 402 and 405.

Lecs, M W F 9:05; sec, W or R 1:25-4:25
On days farms are visited, the section
period is $1: 25-6: 00$. W. A. Knoblatuch.
An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis,
budgeting, and acquisition, organization, and management of capital, labor, land, buildings and machinery.

## AG EC 310 Introductory Statistics

Fall, spring, or summer. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra Lecs, M W F 1:25; sec T 9:05-11,
12:20-2:15, or $2: 30-4: 25$ ( 2 secs);
W 11:15-1:10 or $2: 30-4: 25$ ( 2 secs); or
R 12:20-2:15 or $2: 30-4: 25$ ( 2 secs).
3 evening exams. C. van Es.
An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

## AG EC 320 Business Law I

Fall. 3 credits. Limited to juniors, seniors, and graduate students.

Lecs, M W F 9:05. 1 evening prelim.
D. A. Grossman.

Consideration is given chiefly to legal
problems of particular interest to persons who expect to engage in business. Emphasis is on
the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

## AG EC 321 Business Law II

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law

Lec, T R 8:30-9:55. D. A. Grossman The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships and corporations. The second portion of the course will review selected topics in business law, including employment discrimination, secured transactions, product liability,
bankruptcy, and commercial paper.

## AG EC 323 Managerial Accounting

Fall. 3 credits. Prerequisite: AG EC 221 or equivalent.

Lecs, M W 12:20; disc, R 10:10-12:05.
12:20-2:15 ( 2 secs), or $2: 30-4: 25$ ( 2 secs);
or F $12: 20-2: 15$ ( 2 secs). 2 evening prelims, a third exam, and a project on an electronic spreadsheet. J. Dentes
An intreduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Limited use of Lotus on the IBM PC.

## AG EC 324 Financial Management

Spring. 4 credits. Prerequisite: AG ECC 220 or equivalent. Recommended: AG EC 221 and 310 or equivalents.

Lecs, M W F 9:05; disc, W 2:30-4:25 or R 9:05-11, 12:20-2:15, or 2:30-4:25, or F 10:10-12:05 or $12: 20-2: 15$. 2 evening prelims. I3. L. Anderson. Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze investment decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management. Microcomputers are used for analyzing financial problems. Previous computer experience is preferred, but optional instruction offered.

## AG EC 325 Personal Enterprise and Small Business Management

Spring. 3 credits. Limited to juniors and seniors. Prerequisites: AG EC 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting.

Lec, M W 1:25; disc, R $10: 10-12: 05$ or $2: 30-$
$4: 25$, or $\mathrm{F} 10: 10-12: 05$ or $2: 30-4: 25$. Staff. Acquaints students with the changing role of small businesses in the global economy. special emphasis on the problems of planning and starting a new business, including strategic planning, marketing, financing, and managing growth. Term project, development of a business plan, is done in groups assigned within discussion sections. Case studies and visiting entrepreneurs illustrate various small business issues.

## AG EC 340 Futures and Options Trading

Spring. 3 credits. Prerequisites: ECON 101 Open by application only. S-U grades optional.

Lec, T R 10:10-11:25. Evening prelim. D. Streeter

The focus of the course is on the use of agricultural financial futures and options as marketing and management tools. A primary objective is to understand how companies, financial institutions, and farm businesses can employ hedging strategies to manage risk. Students will participate in a simulated trading exercise in which they will use real-time price and market information and input from industry experts to manage a hedge position.
AG EC 342 Marketing Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: AG EC 240 and ECON 101-102.

Lecs, M W F 10:10; disc, R 12:20-1:50 or
2:30-4 (2 secs), F 10:10-11:40 (2 secs), or
12:20-1:50 (2 secs). In weeks discs are
held, there is no F lecture. R. D. Christy. Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

AG EC 346 Dairy Markets and Policy Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ECON 101 or equivalent.

Lecs, T R 8:30-9:55. H. M. Kaiser. A survey of the structural and institutional characteristics of dairy markets and the analysis of policy issues, pricing systems, and government programs, including marketing orders, price supports, and import policies.

## AG EC 347 Marketing Fruits, Vegetables,

 and Ornamental ProductsFall. 3 credits. S-U grades optional. Estimated cost of field trip, $\$ 50$.

Lec M W F 12:20. A two-day field trip.
E. E. Figueroa.

A study of fruits, vegetables, and ornamental product marketing, including seasonal variations. Role of market intermediaries, role of government agencies, and the price discovery process. Discussion and description of horticultural product market orders in the U. S. The emerging importance of interregional and international markets.

## AG EC 380 Independent Honors Research in Social Science

 Fall or spring, $1-6$ credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision.
## AG EC 402 Advanced Farm Business <br> \section*{Management}

Spring. 3 credits. Prerequisite: AG EC 302 or equivalent

Lecs, M W 10:10; disc, W 1:25-3:20.
G. L. Casler.

Emphasis is on evaluating the profitability of alternative investments and enterprises.
Principal topics include strategic planning, the effects of income taxes on investment decisions, capital investment analysis, linear programming, forms of business organization, and financial risk and uncertainty. Experience
in computer applications to farm business management is provided. Previous computer experience is not required.
AG EC 403 Farm Management Study Trip Spring. 1 credit. Prerequisite: AG EC 302. Open by application only.

Lecs, arranged. W. A. Knoblauch. A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

## AG EC 404 Advanced Agricultural

 Finance SeminarSpring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered.

W 3:35-5:30. E. L. LaDue.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Farm Credit Banks of Springfield, one week in Farm Credit Association offices, a field trip to observe FHA financing during fall term, a four-day trip to financial institutions in New York City during intersession, and an actual farm case analysis in the spring term.

## AG EC 405 Farm Finance

Spring. 4 credits. Prerequisite: AG EC 302 or equivalent.

Lecs, M W F 9:05; disc, T 1:25-3:20.
E. L. LaDue.

The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

## [AG EC 406 Farm and Rural Real Estate Appraisal

Spring, weeks 7-15. 2 credits. Limited to 40 students. Prerequisites: AG EC 302 or equivalent and permission of instructor. Not offered 1994-95.

Lec, R 11:15; lab, R 1:25-5:30. 6 half-day
field trips, 1 all-day field trip.
G. J. Conneman.

The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.]

## AG EC 407 Financial Management in Farming

Fall. 2 credits. Limited to ALS majors. Prerequisite: AG EC 405.

Lecs, M W 1:25. J. R. Brake. Financial markets and policies affecting agriculture and farmers. How money and capital markets affect credit cost and availability in agriculture. Insurance concepts for farmers. Financial considerations in starting to farm. Issues in choice of farm organizational structure. Present value concepts.
[AG EC 408 Seminar in Farm Business Decision Making
Fall ( 1 week in intersession). 1 credit. Prerequisites: AG EC 302 and 405 or equivalent, and permission of instructor. Not offered 1994-95.

M T W R F 8-5. G. J. Conneman. Develops method of analyzing farm business management problems. Gives student experience in identifying alternatives in problem solving. Provides opportunities to analyze and evaluate actual farm situations. Two field trips and intensive work with a farm family.]
AG EC 409 Farm Management Workshop Fall. 1 credit. Limited to seniors and graduate students.

T 12:20-2. W. A. Knoblauch and staff. Presentation of current topics in farm management, farm finance, and production economics. Participants take part in seminars where research, teaching, and extension program methodology and results are presented by faculty and graduate students. Students prepare a summary and evaluation of a recent research publication.

## AG EC 410 Business Statistics

Spring. 3 credits. Prerequisite: AG EC 310 or equivalent.

Lecs, M W F 10:10. C. van Es.
This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. The course will involve a research project designed to give experience in collecting and interpreting data.
AG EC 411 Introduction to Econometrics Spring. 3 credits. Limited to juniors, seniors, graduate students. Prerequisite: AG EC 310 or equivalent.

Lecs, T R 10:10-11:25. L. Willett. The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed and simultaneous equation models are introduced. Students are required to specify. estimate, and report the results of an empirical model using econometric methods covered in class.

## AG EC 412 Introduction to Mathematical Programming

Fall. 3 credits. Primarily for juniors, seniors. and M.S. degree candidates. Prerequisite: AG EC 310 or equivalent.

Lecs, T R 12:20-1:35. J. Pratt.
This is a course in applied linear programming. Following a review of linear algebra, the emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems such as work scheduling, blending, resource allocation, capital budgeting, transportation and financial planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced, if time permits.

## AG EC 413 Information Systems and Decision Analysis

Fall. 3 credits. Limited to 80 juniors and seniors. Prerequisites: ABEN 102 or equivalent, ECON 101 or equivalent, and AG EC 310.

Lecs, M W 9:05 or 10:10; labs arranged.
2 evening prelims. D. Streeter.
The focus of the course is on management decision making and the support provided by various components of an information system. The computer models presented support various stages of decision-making: the information seeking stage (e.g., forecasting models), the selection stage (e.g., decision analysis and analytic hierarchy process models), and the implementation stage (e.g. project management models). Students are encouraged to develop their critical thinking about the output from quantitative models and sensitivity analysis is emphasized. Both the promise and the limitations of information technologies are discussed.

## AG EC 415 Price Analysis

Fall. 3 credits. Prerequisites: ECON 313 or CEH 210 or equivalent, AG EC 310 or equivalent.

Lecs, M W F 11:15. L. Willett.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.
AG EC 419 Expert Systems Workshop
Fall. 3 credits. Prerequisite: one computer use or programming course. Absolutely no adds or drops after second class meeting.

Lec, T $2: 30-4: 25$; lab, hours to be arranged.
R. J. Kalter.

A hands-on introduction to the use of expert systems by business managers. Topics include the concepts behind knowlege-based applications, domain selection, knowledge engineering, representation, and processing, reasoning mechanisms, rule and object dynamics, and the integration of expert systems with quantitative models and computer databases. Students will work in groups to design, implement, and test an expert system relevant to a contemporary business problem. Interested students need not be proficient in computer programming to take this course.

## AG EC 422 Estate Planning

Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only.

Lec, M 3:35. D. A. Grossman.
Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and probate procedures are covered.

## AG EC 424 Business Policy

Fall. 3 credits. Limited to seniors majoring in business management and marketing.

T R 9:05-10:35, 11:15-12:45, or 2:30-4.
R. D. Aplin.

An integrating course that examines business policy formulation and implementation from the standpoint of the general manager of an organization, focusing on decision making and leadership. The course is built around a series of cases. Several guest executives. Emphasizes improving oral and written communication skills.
[AO EC 425 Small Business Counseling Fall. 4 credits. Limited to seniors. Prerequisite: AG EC 325 or NBA 300. Not offered 1994-95

Lec, M W 2:30-4:25; disc, 2 hours per
week, arranged. Staff.
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.]

## AG EC 426 Cooperative Management and Strategies

Spring. 3 credits. Recommended: AG EC 220 or equivalent. Estimated cost of field trip, $\$ 50$.

Lecs, M W F 12:20. 2-day field trip
required. B. L. Anderson.
Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture although alternative types of cooperative organizations are discussed, such as: credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

## [AO EC 427 Advanced Personal Enterprise Seminar

Spring. 3 credits. Limited to 18 seniors. Prerequisites: AG EC 325 and 425 . Open by application only. Not offered 1994-95.

Lecs, M W 2:30-4:25. Staff.
Designed for seniors who have a demonstrated interest in starting or managing their own business. A discussion format is used to address current topics that will affect the success of business ventures. Students lead discussions, make presentations, study a business, industry, or issues, and prepare a major project documenting the results of their inquiry. Visits by current enterprise leaders will be an important aspect of the course.]

## AG EC 428 Technology: Management and Economic Issues

Spring. 3 credits. Prerequisites: ECON 101102, or permission of instructor. Limited to juniors and seniors.

Lecs, T R 10:10-11:25. R. J. Kalter. Designed to acquaint students with the role of technology in modern society, business, and education. Emphasis is placed on the context for managerial analysis and decisions with respect to technological adoption. Topics include the historical influence of technology on economic structure and activity, contemporary technological trends, implications for business managers, adoption and diffusion, public acceptance, implications for future structural and spatial organization of economic activity, impediments to technological advancement, and public policy considerations.

## [AG EC 429 Small Business Advisory Group

Fall or spring. 2 credits. Prerequisites: Limited to seniors or graduate standing. AG EC 424 and 425 or equivalents, or permission of instructor. S-U grades optional. Not offered 1994-95.

Lecs, M W 7:30-10:30 p.m.; disc arranged. Staff.
Course provides an opportunity for students to explore a diverse array of small business problems through working with local businesses. Approximately 10-12 businesses are advised by the group each semester. Students work in teams to visit the business and gather background information, and the business owner attends a class session to discuss his or her problems. Student teams then complete a detailed report and provide recommendations to the business owner, which are delivered in a final meeting with the owner at the business location.J
AG EC 430 International Trade Policy Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents.

Lecs, T R 12:20-1:35; optional discussion
to be arranged. D. R. Lee.
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

## AC EC 431 Food and Agricultural Policies

Spring. 3 credits.
Lecs, T R 9:05; disc, R 11:15 or 1:25. H. deGorter.

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

## AG EC 432 Economics of the Public

 SectorSpring. 3 credits. Prerequisite: ECON 313 or CEH 210 or equivalent.

Lecs, T R 2:30-4:00. Staff.
The application of economic concepts to the evaluation of the structure and performance of the public sectors of the economy. Emphasis on microeconomic analysis of public finance and public resource allocation. Principal topics: market failure, articulation of public choice and interests, evaluation of public decisions, and current public policy.

## AG EC 443 Food-Industry Management

Fall. 4 credits. Limited to juniors and seniors. Prerequisite: AG EC 448 or 342 or permission of instructor.

Lecs, T R 9:05-10:35; sec, T 2-3:30.
G. A. German.

A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.

AG EC 446 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructors. $\mathrm{S}-\mathrm{U}$ grades only.

R 3:35-5. G. A. German and
E. W. McLaughlin.

AG EC 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

## AG EC 447 Food Marketing Colloquium

Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing.
Permission of instructors. S-U grades only.
R 3:35-5. G. A. German and
E. W. McLaughlin.

AG EC 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

## AG EC 448 Food Merchandising

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: AG EC 240.

Lecs, T R 10:10-11:25. G. A. German. Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

## AG EC 449 Global Marketing Strategy

Fall. 2 credits. Prerequisite: AG EC 342 or permission of instructor. Cost of field trip, about $\$ 125$.

W 2:30-4. One 2-day field trip to the New
York City area during early November.
E. W. McLaughlin.

This course will examine the marketing environment, opportunities, and challenges in the rapidly changing global marketplace. We will explore what factors are predictive of business success in various national markets and the means by which these factors can be incorporated into firm strategy. The focus of the course will be kept practical and managerial through liberal use of actual case studies, industry guests, and a field trip.
[AG EC 450 Resource Economics
Fall. 3 credits. Prerequisites: MATH 111 and ECON 313. Not offered 1994-95.

Lecs, M W F 2:30-3:20. J. Conrad. Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.]

## AG EC 464 Economics of Agricultural Development

Spring. 3 credits. Prerequisites: ECON 101102 , or permission of instructor.

Lecs, T R 8:40-9:55. R. Barker.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

## AG EC 494 Undergraduate Special

 Topics in Agricultural Economics Fall or spring. 4 credits maximum. S-U grades optional.Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

## AG EC 497 Individual Study in

 Agricultural EconomicsFall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Hours to be arranged. Staff. To be used for special projects designed by faculty members.

## AG EC 498 Supervised Teaching Experience

Fall or spring. 1-3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 140 Roberts I Hall).

Hours to be arranged. Staff.
Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

## AC EC 499 Undergraduate Research

Fall, spring, or summer. $1-4$ credits. Limited to students with grade-point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

## AG EC 605 Agricultural Finance and

 Capital ManagementFall. 3 credits. Prerequisite: AG EC 402 or 405 , or equivalent. Offered alternate years. $\$ 25$ charge for reading materials; no text.

T R 8:40-9:55. E. LaDue and L. Tauer. Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation, loan evaluation, and selected topics on financing agriculture in developing countries.

## AG EC 608 Production Economics

Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents.

Lecs, M W F 10:10. L. W. Tauer. The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

## AG EC 630 Policy Analysis: Welfare Theory, Agriculture, and Trade

 Spring. 4 credits. Prerequisites: AG EC 608 or CE\&H 603, ECON 313, or equivalent intermediate micro theory incorporating calculus.Lecs T R 8-9:55. H. deGorter and staff. The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

## AG EC 640 Analysis of Agricultural

 MarketsFall, weeks 1-7. 2 credits. Prerequisites: AG EC 411 and 415 or equivalents.

Lecs, T R 2:30-4:25. W. G. Tomek. This course is about markets for agricultural products. Focus is placed on identifying their distinguishing characteristics, establishing criteria for evaluating performance, analyzing models for price determination, and evaluating selected public-policy issues related to market performance.
AG EC 641 Commodity Futures Markets Fall, weeks $8-14$. 2 credits. Prerequisites: AG EC 411 and 415 or equivalents. Recommended: AG EC 640.

Lecs, T R 2:30-4:25. W. G. Tomek. This course is primarily about markets for agricultural futures contracts. Emphasis is placed on price behavior on cash and futures markets and the relationships among prices.

These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

## AG EC 652 Land Economics Problems

 Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional.Hours to be arranged. D. J. Allee Special work on any subject in the field of land economics.

## AG EC 660 The World's Food

Spring. 3 credits. S-U grades optional.
T R 12:20-1:40. T. T. Poleman.
Designed to introduce first-year graduate students to food economics and the linkages between food, population, and employment in developing countries. Among the topics considered are the extent of hunger, income and dietary change, control of population growth, and the outlook for feeding an eventual population of $10-12$ billion.

## AG EC 665 Food and Nutrition Policy

(also Nutritional Sciences 685)
Spring. 3 credits. Prerequisites: CE\&H 310 or 603 or ECON 313 or AG EC 415 or equivalent. Knowledge of multiple regression. S-U grades optional.

Lecs, M W 1:25-2:35. D. Sahn.
The course will identify the principal links between human nutrition, incomes, food consumption, and government action, with emphasis on developing countries. The process of policy formation and the role of economic analysis of foud and nutrition information and surveillance in policy design, and evaluation will be analyzed. Methodologies for empinical data analysis of food and nutrition policy issues, along with approaches for linking macroeconomic and sectoral policies with household-level outcomes will be addressed.

## AG EC 694 Graduate Special Topics in Agricultural Economics <br> Fall or spring. 4 credits maximum. S-U

 grades optional.Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

## AG EC 698 Supervised Graduate

 Teaching ExperienceFall or spring. $1-3$ credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Open only to graduate students. Undergraduates should enroll in AG EC 498. S-U grades optional. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

## AG EC 699 M.P.S. Research

$1-6$ credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report.

## AG EC 700 Individual Study in

 Agricultural EconomicsFall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor

## AG EC 708 Advanced Production Economics

Fall. 3 credits. Prerequisite: AG EC 608, 710, or equivalents; ECON 509 is highly recommended. Offered alternate years.

Hours to be arranged. R. N. Boisvert. Theoretical and mathematical developments in production economics, with emphasis on estimating micro- and macro-production relationships, scale economies, technical change, factor substitution. Recent developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of several other selected topics such as risk, supply response, and household production functions change from year to year based on student interest.

## AG EC 710 Econometrics I

Spring. 4 credits. Prerequisite: matrix algebra and statistics (e.g., BTRY 417 and 601) sufficient to use G. Judge, et al., Introduction to the Theory and Practice of Econometrics, 2d edition, chapters 5 ff.

Lecs, T R 2:30-4:25. W. G. Tomek. This intermediate-level course covers linear statistical models and associated estimators used in econometrics. Topics include dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, nonspherical error terms, and specification errors and misspecification tests. Students seeking an introduction to econometrics should take AG EC 411.

## AG EC 711 Econometrics II

Fall. 4 credits. Prerequisite: AG EC 710 or equivalent. BTRY 417 recommended.

Lecs, T R 10:10-12:05. T. D. Mount. Coverage beyond that of Agricultural Economics 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

AG EC 712 Quantitative Methods I Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended.

Lecs, M W 8:00-9:55. R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis, goal programming, and the transportation model. Special topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

## AG EC 713 Quantitative Methods II

Spring. 4 credits. Prerequisites: ECON 509 and AG EC 710.

Lecs, W F 9:05-11. J. M. Conrad and T. D. Mount.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of numerical and econometric analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

## AG EC 717 Research Methods in

Agricultural Economics
Spring. 2 credits. Limited to graduate students.

M 1:25-3:20. D. G. Sisler and staff. Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

## AG EC 730 Seminar on Agricultural

 Trade PolicySpring. 3 credits. Limited to graduate students. Prerequisites: AG EC 630. Offered alternate years.

Hours to be arranged. D. R. Lee. This course examines selected topics in the professional literature on agricultural trade policy and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

## [AG EC 731 Seminar on Agricultural

 PolicyFall. 3 credits. Limited to graduate students. Offered alternate years. Not offered 1994-95.

T R 12:20-1:50. H. de Gorter.
A review of the professional literature relating to agricultural policy issues and techniques appropriate to the analysis of such issues.]

## AG EC 740 Agricultural Markets and

 Public PolicySpring, weeks $1-7.2$ credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the AG EC 411 level or higher. Recommended: AG EC 640.

T R 12:20-2:15. Staff. Develops the concepts and methodology for applying and analyzing the effects of publicpolicy directives to the improvement of performance in the U.S. food marketing system. Topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture.

## AG EC 741 Space, Trade, and

 Commodity AnalysisSpring, weeks $8-14$. 2 credits. Limited to graduate students. Recommended: AG EC 412 or equivalent and AG EC 640.

T R 12:20-2:15. J. Pratt.
Principal topics are spatial micro-economics of the firm, spatial pricing and location decisions, the forms of spatial competition, and
quantitative methods for spatial analyses, which include techniques for finding spatial equilibriums and selected network optimization algorithms.

## AG EC 750 Resource Economics

Spring, 4 credits. Prerequisites: ECON 509 and 518 , or AG EC 713.

Lecs, T R 2:30-4:20. J. M. Conrad. Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

## AG EC 751 Environmental Economics

Fall. 4 credits. Prerequisites: ECON 509 and 518 , or AG EC 713. S-U grades optional. Lecs, T R 2:30-4:20. D. Chapman and staff.
Economic theory will be applied to the problems of managing environmental quality. Static and dynamic models of externality, decisions to preserve or develop natural environments, and methods of valuation will be presented.

## AG EC 754 Sociotechnical Aspects of Irrigation (also Agricultural and Biological Engineering 754, and Government 644)

Spring. 2 or 3 credits. S-U grades optional. W 7-9:30 p.m. M. Walter, N. Uphoff, and R. Barker.

Examines irrigated agriculture and its relation to agricultural development. Emphasis on social processes within irrigation systems and interactions with social setting, including political and administrative aspects. Provides an opportunity to examine systematically the institutional and organizational policy issues associated with the design and operation of systems of irrigated agriculture in developing countries.

## AG EC 763 Macro Policy in Developing

## Countries

Spring. 3 credits. Prerequisites: ECON 509, 510,513 (may be taken concurrently), or permission of instructor. Offered altemate years.

Lecs, T R 12:20-1:35. S. Kyle.
This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

## ANIMAL SCIENCE

H. F. Hintz, chair; B. J. Apgar, R. E. Austic,
D. E. Bauman, D. H. Beermann, A. W. Bell,
R. W. Blake, W. R. Butler, L. E. Chase,
W. B. Currie, H. N. Erb, R. W. Everett, D. G. Fox, D. M. Galton, R. C. Gorewit, D. E. Hogue, P. A. Johnson, L. R. Jones, K. Keshavarz, W. G. Merrill, E. A. Oltenacu, P. A. Oltenacu, J. E. Parks, A. N. Pell, E. J. Pollak, R. L. Quaas, J. B. Russell, R. D. Smith, M. L. Thonney, D. R. Van Campen. P. J. Van Soest

## AN SC 100 Domestic Animal Biology I

 Fall. 4 credits. S-U grades optional. Lec, M W F 9:05; sec, T W or R 2-4:25.W. B. Currie, M. L. Thonney, and staff. An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, digestion, and metabolism. Students care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

## AN SC 105 Contemporary Perspectives of Animal Science

Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers.

T 1:25 or W 12:20. R. C. Gorewit. A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.
AN SC 110 Animals in Agriculture and Society
Spring. 3 credits. S-U grades optional. Lec, T R 12:20, lab T 2-4:25. D. E. Hogue. Primarily for nonmajors who wish to gain a broad understanding of the role of domestic animals in human society from both an historical and a modern agricultural aspect. Laboratories include practical "hands-on" experiences and visits to the university farms. Proper animal care and management are emphasized.

## AN SC 150 Domestic Animal Biology II Spring. 4 credits. S-U grades optional.

 Lec, M W F 9:05; lab/disc T W or R 2-4:25. W. R. Butler and staff.Second of a two-semester sequence ( $100 / 150$ ) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production of domestic animals. Fresh tissues and organs from dead animals will be used in laboratories.

## AN SC 212 Animal Nutrition

Fall. 4 credits. Prerequisite: CHEM 104 or 208. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 1:25-4:25. A. W. Bell.
An introduction to animal nutrition, including digestive physiology and metabolism of livestock and other species; nutrient properties and requirements for different aspects of animal production; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

## AN SC 213 Nutrition of Companion

 AnimalsSpring, weeks 1-7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Lec $w 7: 30-9: 25$ p.m. H. F. Hintz. Nutrition of companion animals, with emphasis on the dog and cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

## [AN SC 214 Nutrition of Exotic Animals

Spring, weeks 1-7. 1 credit. Prerequisite: AN SC 212 . Offered alternate years. Not offered 1994-95

Lec W 7:30-9:30 p.m. H. F. Hintz. Principles of nutrition for exotic animals including birds and fish. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.I

## AN SC 215 Exotic Avian Husbandry and

 PropagationSpring, weeks $1-8$. 1 credit. Limited to 100 students. Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent.

Lec M 7:30-9:25. J. Parks.
Natural history, care, management, health and breeding of exotic avian species with emphasis on psitticines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 221 Introductory Animal Genetics Spring. 3 credits. Prerequisite: a year of college biology

Lecs, T R 9:05; sec, T W R or F 2-4:25. E. J. Pollak.

An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

## AN SC 230 Poultry Biology

Spring. 3 credits. Prerequisites: AN SC 100 and 150 or introductory biology. Offered altemate years.

Lecs, T R 11:15; lab, M 2-4:25.
R. E. Austic.

A course designed to acquaint the student with principles of avian biology and their application in the various aspects of poultry production. Some laboratory sessions involve dissection and/or the handling of live birds.

## AN SC 250 Dairy Cattle

## Fall. 3 credits. S-U grade optional.

Lecs, T R 10:10; lab, M T or R 1:25-4.
D. M. Galton, K. Wagner.

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 351.

## AN SC 251 Dairy Cattle Selection

Spring. 2 credits. Prerequisite: AN SC 250 or equivalent.

Lalh, W 12:20-4:25. D. M. Galton. Emphasis on economical and type traits to be used in the selection and evaluation of dairy cattle, including breeding programs that lead to greater genetic progress and herd profitability. Practical sessions include planned trips to dairy herds.

## AN SC 265 Horses

Spring. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional.

Lecs, T R 10:10; lab, R 1:25-4:25.
C. Collyer.

Selection, management, feeding, breeding, and training of light horses.

## AN SC 290 Meat Science

## Fall. 3 credits

Lecs, T R 11:15; lab, M or R 12:20-3:20.
D. H. Beermann and staff.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meatanimal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

## AN SC 300 Animal Reproduction and Development

Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology.

> Lecs, M W F 10:10. J. Parks.

Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

## AN SC 301 Animal Reproduction and Development Lab

Spring. 1 credit. Prerequisite: AN SC $100-$ 150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register.

Labs, M W or F 1:25-4:25. Each lab
limited to 30 students. J. Parks.
Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

## AN SC 305 Farm Animal Behavior (also

 BIOAP 312)Spring. 2 credits. Prerequisites: introductory course in animal physiology; at least one animal production course or equivalent experience is recommended. S-U grades optional.

Lec, T R 11:15. E. A. Oltenacu and K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to feeding, reproduction, and social interactions of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

## AN SC 312 Applied Cattle Nutrition

Spring. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent).

Lecs, M W F 10:10; lab, M 1:25-4:25 or
T 9:05-12:00.. D. G. Fox.
An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle
type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is cliscussed. Computer models are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms.

## AN SC 321 Cenetic Improvement of

 AnimalsSpring. 3 credits. Prerequisite: AN SC 221 or equivalent

Lecs, M W 9:05; Iab, R 1:25.
P. A. Oltenacu.

Translating genetic principles into effective breeding schemes is approached from the farm and industry perspectives in a decisionmaking framework. Current animal improvement strategies as well as potential systems incorporating new developments in reproductive biology and molecular genetics will be addressed in genetic and economic terms.

## [AN SC 330 Commercial Poultry

 ProductionSpring. 2 credits. Prerequisites: AN SC 100, 150 , and 230 or permission of instructor. Offered alternate years. Not offered 1994-95. F 2-4 (occasional field trips run past 4 p.m.). K. Keshavarz.

The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.]
AN SC 341 Physiology of Lactation
Spring. 3 credits. Prerequisite: AN SC 150 or AN SC 300 or equivalent.

Lecs, T R 9:05; lab, R 2-4:25.
R. C. Gorewit.

The physiology of milk production is covered with emphasis on mammary gland development, anatomy, hormonal control of milk secretion, and the biosynthesis of milk constituents. The dairy cow serves as the model system, hut all livestock species are considered.

## AN SC 351 Dairy Herd Management

Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: AG F.C 302.

Lecs, M W F 11:15; labs, T 1:25-4:25 or
R 9-12, and F (alternate weeks) 1:25-4:25.
D. M. Galton and staff.

Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

## AN SC 360 Beef Cattle

Spring. 3 credits. Limited to 32 students. Lecs, T R 10:10; lab, W 2-4:25.
M. L. Thonney.

Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills needed for a beef operation. Students are required to spend several days during the semester feeding and caring for cattle and observing calving.
[AN SC 370 Pig Management and Biology Fall. 3 credits. Recommended: AN SC 100. S-U grades optional.

Lecs, T R 11:15; sec, T 2-4:25. Staff. Not
offered 1994-95.

Lectures emphasize fundamentals in production and management and the biological basis for recommended practices and anticipated developments. An attempt is made to illustrate where management principles can be broadly applied to other large farm and companion animals. Labs apply principles discussed in lecture with emphasis on problem solving and extensive "hands-on" experience. Opportunity for extensive experience is provided through Pig Teaching and Research Farm.]

## AN SC 380 Sheep

Fall. 3 credits.
Lec, T R 9:05; sec, W 1:25-4:25 every other week. D. E. Hogue.
The breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved practices.

## AN SC 392 Animal Growth Biology

Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology, AN SC 212 and 221.

Lec, R 1:25-3:25; sec, F 1:25-2:15.
D. H. Beermann and staff.

A detailed discussion of the anatomy and physiology of growth in domestic farm animals. Cellular aspects of tissue-growth patterns, their relationship to body composition, and measurement of growth and body composition will be discussed. Endocrine, genetic, nutritional, and pharmacological influences on growth, metabolism, and body composition will be emphasized.

## AN SC 400 Tropical Livestock Production

Spring. 3 credits. Prerequisite: Upperclass standing.

Lecs, T R 9:05; disc W 1:25-3:20.
R. W. Blake.

An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security

## AN SC 401 Dairy Production Seminar

 Spring. 1 credit. Limited to juniors and seniors.Disc, M 7 p.m. D. E. Bauman. Students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry Students then make an oral and a written report on their topic
AN SC 402 Seminar in Animal Sciences Spring. 1 credit. Limited to juniors and seniors. May be repeated. S-U grades optional.

M 4:30. W. B. Currie and P. A. Johnson. Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

## [AN SC 403 Tropical Forages

Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Not offered 1994-95.

Lecs, T R 12:20. P. J. VanSoest.
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value forages and crop residues; physiology of digestion of ruminants that affects feeding behavior of various species; problems of chemical inhibitors in plants; and utilization of tropical forages as hay or silage.]

## AN SC 410 Principles of Animal Nutrition

 Fall. 3 credits. Prerequisites: biochemistry and physiology.$$
\text { M W F } 11: 15 . \quad \text { R. E. Austic and }
$$

D. E. Bauman

A fundamental approach to nutrition focusing on the metabolism as well as the biochemical and physiological functions of the known nutrients. The basic principles of nutrition are elaborated with examples drawn from a broad range of animal species, including humans.

## AN SC 415 Poultry Nutrition

Spring. 1 credit. Prerequisite: AN SC 410 or permission of instructor.

F 11:15. G. F. Combs, Jr. A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

## AN SC 420 Quantitative Animal Genetics

 Fall. 3 credits. Prerequisite: AN SC 221 or equivalent.Lecs, T R 11:15; sec, W or R 2-4:25.
E. J. Pollak.

A consideration of problems involved in improvement of animals, especially farm animals, through application of the theory of quantitative genetics, with emphasis on selection index.

## [AN SC 425 Gamete Physiology and Fertilization

Fall. 2 credits. Limited to 50 students.
Prerequisite: AN SC 300 or equivalent.
Offered alternate years. Not offered 1994-95.
Lecs, R 2:30-4:25. J. Parks.
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and demonstration of selected aspects of gamete physiology and in vitro technologies such as oocyte maturation and fertilization.]

## AN SC 427 Fundamentals of Endocrinology

Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor.

Lecs, M W F 9:05. P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 430 Embryo Biotechnology
Fall. 1 credit. Prerequisite: a course in reproductive physiology and permission of instructor at preregistration. Limited enrollment. Fee of $\$ 50$ includes books and supplies.

All day, 5 days during fall or to be
arranged. R. H. Foote and X. Yang. Principles and practice of superovulation, freezing of embryos, in vitro fertilization, embryo collection, evaluation, embryo culture micromanipulation, and transfer in cattle and rabbits. Embryo transfer may require surgery.

## AN SC 455 Dairy Nutrition and Health

Fall. 3 credits. Prerequisite: AN SC 351 and permission of instructor.

Lecs, W F 12:20; lab, M or T 1:25-4:25; and
F (alternate weeks) 1:25-4:25.
D. M. Galton, K. Wagner.

Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

## AN SC 456 Dairy Management

 FellowshipSpring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 455, and permission of instructor. S-U grades only.

Hours to be arranged. D. M. Galton,
K. Wagner.

The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to dairy farmers' objectives and methodology, to expand the concept of team approach in the development and implementation of management programs, and to gain further understanding of the role of research and industry in agriculture.

## AN SC 457 Livestock Fellowship

Spring. 2 credits. Prerequisite: permission of instructor. S-U grades only.

F 1:00-4:25. D. E. Hogue.
A program for students with particular interests in meat animal production, beef cattle, sheep, and swine. Objectives are to gain a more thorough understanding of the production of these species and their integration in various farm management situations. Students will participate in extension education programs and have contact with representative livestock producers as well as the agribusiness organizations important to livestock production.

## [AN SC 490 Commercial Meat

 ProcessingSpring. 3 credits. Prerequisite: AN SC 290 or permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, T R 9:05; lab, T 1:25-4:25. Field trip
to commercial meat processing plants.
D. H. Beermann.

A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat ingredients; their functional properties; various processing methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.]

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## AN SC 496 Animal Sciences Honors Seminar

Fall weeks 1-8. 1 credit. S-U grades only. Students must be accepted into the Animal Sciences Honors Program.

Disc, M 2:30-4. W. B. Currie.
The course is designed to provide information and guidance for students enrolled in the honors program in animal sciences and expecting to complete an honors thesis. The following topics will be presented and discussed: requirements and expectations of the honors program, formulating hypotheses, the scientific method, literature search techniques ethics in science, and scientific communication. Students are required to make verbal presentations.

## AN SC 497 Individual Study in Animal Science

Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff.
May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

## AN SC 498 Undergraduate Teaching

 Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

## AN SC 499 Undergraduate Research

Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with gradepoint averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

## AN SC 600 Research

Fall or spring. Credit to be arranged.
S-U grades optional.
Hours to be arranged.
Faculty in the field of animal science.

AN SC 601 Amino Acids (also Nutritional Sciences 601)
Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition. Offered altemate years.

Lecs, W F 12:20. R. E. Austic.
A course emphasizing the dynamic aspects of protein digestion and absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the requirements for, and nutritional interactions of, amino acids.

## AN SC 604 Vitamins

Fall. 2 credits.
T R 10:10. G. F. Combs, Jr.
The biochemical, physiological, and clinical aspects of the vitamins presented in an interactive discussion-based format.

AN SC 605 Forage, Fiber, and the Rumen Spring. 4 credits. Prerequisites: either general nutrition and biochemistry or permission of instructor. S-U grades optional. Offered alternate years.

M W F 12:20; disc, W 11:15 or F 1:25.
P. J. Van Soest.

Ruminant nutrition; lower-tract fermentation in monogastrics; nutritional biochemistry of forage plants, fiber, and cellulosic material.

## AN SC 610 Seminar

Fall and spring. 1 credit. S-U grades only. T 4:15. Department faculty.

## AN SC 613 Forage Analysis

Spring. 2 credits. Prerequisite: permission of instructor. S-U grades optional.

Lab, R 2-4. P. J. Van Soest.
Chemical composition and nutritive evaluation of forage plants and related materials. The course includes a term paper summarizing results of independent laboratory study of either materials or methods.

## AN SC 619 Field of Nutrition Seminar

Fall and spring. No credit. No grades given. M 4:30. Faculty and guest lecturers.
Lectures on current research in nutrition
AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only.

Hours to be arranged.

## AN SC 621 Seminar: Endo/Reprod Biology

Fall and spring. 1 credit. Prerequisites: Permission of instructor. Registration limited to graduate students. S-U grades only.

W 4:30. W. R. Butler and staff.
Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

## AN SC 630 Bioenergetics/Nutritional Physiology

Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years.

Lec, M W F 10:10. A. W. Bell and
D. E. Bauman.

An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

## AN SC 640 Individual Study in Animal Science

Fall or spring. 1 or more credits. S-U grades optional

Hours to be arranged. Staff.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

## AN SC 694 Special Topics in Animal Science

Fall or spring. 4 credits maximum
S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number

## AN SC 720 Advanced Quantitative Genetics

Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Offered alternate years. Not offered 1994-95.

Hours to be arranged. R. L. Quaas. Estimation of genetic and environmental parameters required to design efficient selection programs. Emphasis is given to interpretation of experimental and survey data with unequal subclass numbers, and prediction of genetic progress resulting from alternative selection methods.]

## Related Courses in Other Departments

Introductory Animal Physiology (BIOAP 311) Introductory Animal Physiology Laboratory (BIOAP 319)

Milk Quality (FOOD 351)
Agriculture in the Developing Nations (INTAG 602 Lipids (NS 602)
Basic Immunology, Lectures (BIOBM 305)
Basic Immunology, Laboratory (BIOBM 307)

## BIOLOGICAL SCIENCES

The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see the section on the Division of Biological Sciences.

## BIOMETRY AND STATISTICS

C. E. McCulloch, chair; N. S. Altman, G. Casella, C. Castillo-Chavez, G. A. Churchill, S. J. Schwager, S. R. Searle

Courses in biometry and statistics are offered by the Biometrics Unit in the Department of Plant Breeding and Biometry.

## BTRY 102 Introduction to Biometry

 Fall. 3 credits. S-U grades optional. Prerequisites: ALS 115 or equivalent.Lec, M W 11:15-12:05; lab, 2 hr. and 25
min. to be arranged. C. Castillo-Chavez. An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation Selected topics in differential and difference
equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

## BTRY 200 Statistics and the World We

 Live InSpring. 3 credits.
Lecs, T R 10:10-11:25; disc, 1 hr . to be arranged. Staff
Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawving conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

## BTRY 215 Introduction to Statistical

 MethodsFall. 3 credits. Prerequisite: BTRY 200 is recommended for students with no prior experience in data collection and interpretation.

Lecs, M W F 11:15; lab, 50 min . to be arranged. R. W. Doerge.
Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

## BTRY 408 Theory of Probability

Fall. 4 credits. Prerequisite: MATH 112, 122 or 192 , or permission of instructor.

Lecs, M W F 10:10; disc, M 3:35-5
G. A. Churchill.

An introduction to probability theory foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

## BTRY 409 Theory of Statistics

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

Lecs, M W F 10:10; disc, M 3:35-5.
C. E. McCulloch.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601-602 or BTRY 215

## BTRY 417 Matrix Algebra

Fall. 3 credits. Prerequisite: precalculus mathematics.

Lecs, M W F 9:05; disc, M 1:25-3:10
C. E. McCulloch and S. R. Searle Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenroots and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

## BTRY 451 Mathematical Modeling of Populations

Fall. 3 credits. S-U grades optional. Prerequisites: MATH 111 and 112, or equivalent. Offered alternate years. Not offered 1995-96. Lecs, M W F 1:25-2:15.
C. Castillo-Chavez

This course concentrates in the analysis and simulation of mathematical models, and it will focus in the study of models relevant to population genetics and population biology. Mathematical techniques that are relevant to these areas will be presented. The course will emphasize stochastic and deterministic models. Computer simulations and the use of mathematical packages will be an integral part of this course.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics
Fall or spring. 1-3 credits. S-U grades optional.

Staff.
A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

## BTRY 495 Statistical Consulting

Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 409 and 602 and permission of instructor.

Lec, W 1:25-2:15 plus 1 hr . of consulting
to be arranged. Staff.
Participation in the Biometrics Unit consulting service: faculty-supervised statistical
consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks

## BTRY 497 Undergraduate Individual

 Study in Biometry and StatisticsFall or spring, 1-3 credits. S-U grades
optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

## BTRY 498 Undergraduate Supervised

 TeachingFall or spring. 2 credits. S-U grades only Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 499 Undergraduate Research
Fall or spring. $1-3$ credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.

## BTRY 600 Statistics Seminar

Fall or spring. 1 credit. S-U grades only. Sem, w 3-4:30. Staff.

## AGRICULTURE AND LIFE SCIENCES - 1994-1995

## BTRY 601 Statistical Methods I

Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor.

Lecs, M W F 12:20; lab, 1 hr . and 30 min .
to be arranged. C. E. McCulloch Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

## BTRY 602 Statistical Methods II

Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.

Lecs, M W F $11: 15$; lab, 1 hr . and 30 min .
to be arranged. Staff.
A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

## BTRY 603 Statistical Methods III

Fall or spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Offered Spring 1995.
G. A. Churchill.

Categorical data analysis, including logistic regression, loglinear models, combining contingency tables, and applications to case control studies. Statistical aspects of survival analysis, and statistical analyses for clinical trials.

## [BTRY 604 Statistical Methods IV:

 Applied DesignFall or spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1994-95.
G. Casella.

Applications of experimental design including such advanced designs as split plots,
incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.l
[BTRY 605 Applied Regression Analysis Fall, $1 / 3$ of the term. 1 credit. Prerequisites: BTRY 409 and 602 . Offered alternate years. Not offered 1994-95.
A continuation of BTRY 602, with emphasis on data analysis including logistic and nonlinear regression.]

## BTRY 606 Sampling Biological

 PopulationsFall, $1 / 3$ of the term. 1 credit. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1995-96.
S. J. Schwager.

Standard methods of sample-survey design and estimation are presented, including stratified random sampling, cluster sampling, double sampling, and variable probability sampling. Special emphasis given to methods of particular utility or specifically designed for biological sampling. Examples are taken from forestry, fisheries, and other biological areas.

## [BTRY 607 Nonparametric and

Distribution-Free Statistical Methods Spring, $1 / 3$ of the term. 1 credit. S-U grades optional. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1994-95.

Staff.
Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs; comparisons among several means; correlation and regression; goodness-of-fit: and tests based on randomization of the data.]

## BTRY 639 Epidemiology Seminar (also Nutritional Sciences 639)

Fall and spring. 1 credit, variable. S-U grades only. Permission of instructor.

Sem, M 12:20. Staff.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.
[BTRY 642 Advanced Mathematical Methods in Biometry and Statistics Spring. 3 credits. S-U grades optional. Prerequisites: MATH 411 or 421 , or equivalent. Offered alternate years. Not offered 1994-95.

Lecs, T R 12:20-1:50. C. Castillo-Chavez. This advanced level course will cover classical mathematical methods that are useful in statistics, biometry, and biomathematics, with an introduction to MACSYMA. Topics include: Introduction to MACSYMA, complex numbers and their elementary properties, analytic functions, contour integration, special functions, asymptotic methods, generalized functions, and the Fourier transform. Techniques will be illustrated with examples drawn from statistics, biometry, and biomathematics.]

## [BTRY 651 Mathematical Population

 Studies and ModelingSpring. 3 credits. S-U grades optional. Prerequisites: BTRY 408 and 417, or equivalent. BTRY 409 is recommended. Offered altemate years. Not offered 1994-95.

Lecs, T R 12:20-1:50. C. Castillo-Chavez. Model formulation, parameter estimation, and mathematical analysis of stochastic and deterministic models in population dynamics. Emphasis will be put on the interactions between human demography and sociology (human behavior), and their relationship to disease dynamics of microparasitic and macroparasitic infections. The process of pair formation and dissolution and their impact on demography, sociology, and epidemiology will also be studied.]

## BTRY 662 Mathematical Ecology (also BIOES 662)

Spring. 3 credits. Prerequisites: a year of calculus and a course in probability. Offered alternate years. Not offered 1995-96.

Lecs, M W F 12:20. Staff.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

## BTRY 681 Topics in Environmental

 StatisticsFall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.

Lec, R 10:10-11:25. Staff.
This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

## BTRY 694 Graduate Special Toples in Biometry and Statistics

Fall or spring. $1-3$ credits. S-U grades optional.

Staff.
A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

## BTRY 697 Individual Graduate Study in Biometry and Statistics

Fall, spring, or summer. $1-3$ credits. S-U grades optional.

Staff.
Consists of individual tutorial study selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

## BTRY 717 Linear Models

Spring. 3 credits. S-U grades only. Prerequisites: BTRY 409 or equivalent and BTRY 417 and 602. Offered alternate years. Not offered 1995-96.

M W F 11:15. S. R. Searle.
Analysis of variance and estimation procedures for unequal-subclass-numbers data. Cell means models for the 1 -way classification, nested classifications, and the 2 -way crossed classification, both with and without interactions; introduction to multinormal variables and the distribution of quadratic forms. The general linear model (in matrix and vector form), estimable functions, and testable hypotheses. Overparameterized models, restricted models, multifactor cases, covariables, computing.

## [BTRY 718 Variance Components

 Spring. 3 credits. S-U grades only. Prerequisite: BTRY 717. Offered alternate years. Not offered 1994-95.S. R. Searle.

Several methods of estimating variance components are explained and compared: for balanced data (equal subclass numbers), the analysis of variance method; for unbalanced data (unequal subclass numbers), the three Henderson methods and the methods of maximum likelihood, restricted maximum likelihood, and minimum norm quadratic unbiasedness. Also included: estimation from mixed models, prediction of random variables, the dispersion-mean model, and computer package output for variance component estimation.]

BTRY 795 Statistical Consulting
Fall and spring. 2 credits. S-U grades only. Limited to graduate students.

Lec, W $1: 25$ and 1 hr . of consulting to be arranged. Staff.
Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the service during previous weeks. Since consultations usually change from semester to semester, this course may be repeated for credit.

## BTRY 899 Research

Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the M.S. level.

## BTRY 999 Research

Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concemed. Research at the Ph.D. level.

## COMMUNICATION

R. D. Colle, chair; N. E. Awa, B. O. Earle,
G. Gay, C. J. Glynn, D. A. Grossman,
J. E. Hardy, B. Lewenstein, A. Marshall,
D. G. McDonald, R. E. Ostman, T. M. Russo,
C. Scherer, D. F. Schwartz, M. A. Shapiro,
P. Stepp, R. B. Thompson, M. Toor,
L. VanBuskirk, W. B. Ward, S. A. White,
J. P. Yarbrough

The middle and last digits of course numbers are used to denote specific areas:
00-09 Speech communication
10-19 Interpersonal communication
20-29 Mass communication
30-39 Visual communication and graphic design
40-49 Electronic media
50-59 Journalistic writing
60-66 Professional writing
67-69 Editing
70-79 Communication planning and strategy (advertising and public relations)
80-89 Research methods and interdisciplinary courses
90-94 Special topics and seminars
95-99 Individualized study

## COMM 116 Theories of Human Communicatlon

Spring or summer. 3 credits. Not open to first-semester freshmen. S-U grades optional. Spring: lecs, M W 12:20; disc., F 12:20. Staff.
Designed to introduce students to the basic areas of study common in communication theory and research. Basic ideas and theories about language, interpersonal communication, small-group communication, nonverbal
communication, organizational communication, and the mass media will be covered.

## COMM 120 Understanding Mass

 CommunicationFall: lecs, M W 12:20; sec. 1, R 12:20, sec. 2, R 12:20, sec. 3, F 10:10, sec. 4, F 10:10, sec. 5 , F 12:20, sec. 6, F 12:20. D. McDonald. Mass communication and its impact. Emphasis on understanding contemporary mass communication through four approaches: the information revolution; living in the information sociery; contemporary research and theory; and implications of mass communication in understanding contemporary social issues.

## COMM 190 Communication Perspectives

 SeminarFall. 1 credit. S-U grades optional.
Lec, M 1:25. B. O. Earle and staff. Open to freshmen/transfer students in the Department of Communication. The course will provide an orientation to the department and university and serve as a forum to discuss contemporary and future roles of communication in society. Presentations by Cornell faculty and staff members, and by professionals in the field. Topics will be selected from areas such as new technology, constitutional and policy issues, career opportunities, professionalism and ethics, societal changes and implications.

## COMM 191 Topics In Communication

 Summer. 1-3 credits.Hours to be arranged. Staff.
Sudy of topics in communication at lowerdivision level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

## COMM 201 Oral Communication

Fall, spring, or summer. 3 credits. Each section limited to 24 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes.

Disc, M W F 8; M 8 and W F 9:05; M 9:05 and W F 8; M W F 9:05; M 9:05 and W F
10:10; M 9:05 and W F 11:15; M 9:05 and
W F 12:20; M W F 10:10; M 10:10 and W F 11:15; M F $11: 15$ and W 1:25; M F 12:20
and W 1:25; M 12:20 and W F 9:05; M
12:20 and W F 10:10; M W F 1:25; M T W
12:20; T R 9:05 and W 12:20; T R 10:10 and W 12:20; T R 10:10 and W 1:25; T R 11:15 and W 12:20; T R 11:15 and W 1:25; T W R 12:20; T W R 1:25; M 10:10 and T R 9:05; M T R 10:10. Some section times may be omitted in some semesters.
R. B. Thompson, T. Russo, M. Korcok, and staff.
Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speechrelated activities.

## COMM 203 Argumentation and Debate

Fall, spring, or summer. 3 credits.
T R 10:10-11:35. P. Stepp.
The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of
research, and writing and speaking in a logical, persuasive manner.

## COMM 204 Effective Listening

Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes.

Lec, M 1:25-2:40; sec., T, W, R, F
1:25-2:40, or R 2:50-4:05 (two evening prelims per semester). Staff.
Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic
listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

## COMM 216 Communicating

Interpersonally
Fall, spring, or summer. 3 credits. Prerequisite: COMM 116 or permission of instructor. Not open to freshmen. Communication sophomore majors are given first priority.

Lecs, T R 10:10-11:25. Staff.
The course emphasizes understanding the dynamics affecting interpersonal communication in personal, social, and professional circumstances. It addresses self-awareness, assertiveness, person perception, attraction, and conflict management. Instruction techniques include in-class exercises, assigned reading, class discussion and lecture, plus report of field observation and journal-

## keeping assignments.

## COMM 230 Visual Communication

Fall. 3 credits. Limited to nonfreshmen and communication freshmen. Not recommended for design or ant majors. Cost of individual project materials, $\$ 20-\$ 30$.

Lec, T R 9:05; computer lab 1, T 1:25-3:20,
lab 2, R 10:10-12:05, lab 3, F 1:25-3:20, lab
4, F 10:10-12:05. Scherer.
A basic course in the use and importance of visual communication. Course focuses on objectives, audiences, and methods of visual production. Particular emphasis is placed on the visual communication of scientific and technical information. The laboratory concentrates on the use of computers for production of visual materials. Practical projects are assigned.

## COMM 232 Art of Publication

Fall, spring, or summer. 3 credits. Each lab limited to 25 nonfreshman students. Students missing the first two classes without university excuse are dropped so others may register. Project materials cost $\$ 50-\$ 75$.

Fall and spring. M or W 1:25-4:25.
M. Toor.

A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typography, and illustrations is stressed. Lectures, in-class laboratory assignments, and outside projects examine opportunities and problems in publication design and desktop publishing.

## COMM 250 Newswriting for Newspapers

 Fall, spring, or summer. 3 credits. Limited to 25 students. Prerequisite: Major in communication, or permission of instructor. Keyboarding ability essential. Students missing first two classes without university excuse will bedropped.

Lec, R 1:25-2:20; lab, R 2:30-4:25, plus out-of-class writing assignments. Staff. Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

## COMM 272 Principles of Public Relations

 and AdvertisingFall or summer. 3 credits. Preference given to ALS students. Not open to freshmen. Lecs, M W F 12:20. Staff.
Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

## COMM 280 Critical Thinking about Communication*

Spring. 3 credits. Prerequisite: Comm 116, 120 , and at least one writing or oral communication course. Communication majors only. Not open to freshmen. Communication sophomores given priority. Each section limited to 17 students.

T R 12:20-1:50; T R 2:30-4:00. Staff. Expanding upon conceptual knowledge gained in introductory communication courses, students will learn critical thinking in the context of communication topics, issues, problems, and questions selected annually by individual instructors. After leaming, discussing, and practicing critical thinking, students will have an enhanced ability to create and sustain responsible dialogue, as well as to evaluate implications and applications of thought.
*Pending approval by College Curriculum Committee
COMM 284 Cender and Communication Spring. 3 credits. Not open to freshmen. M W F 2:30. L. VanBuskirk and staff. The course explores the construction of gender and personal, social, and economic implications of gender categories. Topics considered include history, social structures, personal relationships, nonverbal and mass communication. Distinctions among ways that the arts, mass media, social and historical forces, and intra- and interpersonal relationships communicate gender will be considered.

## COMM 301 Business and Professional

 SpeakingFall, spring, or summer. 3 credits. Prerequisite: COMM 201.

Lec, M 11:15; sec., T 2:30-4:25, W
11:15-1:10 or R 10:10-12:05. B. Earle. The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Advanced Public Address I
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis.

To be arranged. P. Stepp.
The first course in a year-long sequence Students prepare and present speeches not covered in introductory courses, including limited preparation events (e.g., extemporaneous speaking, in which one composes and presents a speech on current events within a 30 -minute period); rhetorical criticism (students apply analytic tools to extant speeches to reveal their structure and intent); and special events, which typically involve unusual constraints upon the speaking situation. Students also do advanced work in informative and persuasive speech. Students prepare a minimum of four different kinds of speeches for tournament presentation.

## COMM 304 Oral Interpretation of

 LiteratureFall or spring. 2 credits. Limited to $10-15$ Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis.

To be arranged. P. Stepp. Students consider the structures of literary works for intellectual and emotional content; practice the techniques of composing programs of prose, poetry, or drama for presentation; and develop the skills necessary to realize such programs in live performance. Students prepare a minimum of three different programs for tournaments.
COMM 314 Small-Group Communication Spring. 3 credits. Limited to juniors and seniors. Prerequisite: COMM 116 or permission of instructor.

T R 1:25-2:45. N. E. Awa.
The course is designed to help students explore the dynamics of group interaction processes through exposure to small-group constructs and research and development of skills vital to application of principles to real life situations. The approach is eclectic, covering theories from such cognate fields as psychology, sociology, education, and organizational behavior. Students will learn experientially about groups by participating in group (problem solving) projects. Among the areas covered are the role of groups in contemporary society, leadership, decision making and problem solving techniques, conflict management and resolution, groups in business and industry, and team development.

## COMM 316 Rhetorical Theory

Fall. 3 credits. Limited to 20 students. Communication majors have preference. Prerequisites: COMM 116 and 201 or permission of instructor.

M W F 1:25. R. Thompson.
Considers current views of rhetoric in historical perspective. Shows how assumptions about communication both shape the worldview of the communicator and either aid or hinder the reaching of various communication goals. Treats historical figures briefly; focuses on contemporary thinkers such as Toulmin, Ong, Burke, Habermas, Foucault, Perelman, Richards, Kuhn. Second half of course taught in seminar format.

## COMM 342 Electronic Media

Spring or summer. 3 credits. Limited to 18 communication majors. Prerequisite: COMM 120.

Lec, R 1:25; lab, R 2:30-4:25. T. Russo.

The techniques of audio and video message design and production. Emphasis on development of skills needed for the creation of effective audio/video production. Students complete exercises designed to develop specific competencies and work on productions from conception through completion.

## [COMM 346 Television Writing and

 Production ProjectsFall. 3 credits. Limited enrollment. Permission of instructor required. Prerequisite: COMM 342. Preference given to communication majors. Not offered 1994-95.

Arranged. Staff.
Video and audio production projects. Students gain experience in studio and field production. Course concentrates on developing a sense of project planning and production aesthetics. Production concentration is on producing full-scale information, documentary, or public affairs programs from development of the idea through research, scripting, planning, and production.]
COMM 348 Video Communication
Fall. 3 credits. Prerequisites: COMM 342, and/or permission of instructor.

R 1:25-4:25. S. A. White. An overview of video communication research and application, visual thinking and articulation as foundation for constructing messages using participatory approaches. Covers basics of interactive media. Hands-on team project, which integrates knowledge and skill in theory and practice. Students have access to camcorders and editing equipment. Emphasis is on use of video as a communication tool in organizations grounded in organizational and visual communication theory.

## COMM 350 Writing for Magazines

Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments.

Fall: M 1:25-4:25, W. B. Ward; spring:
T R 11:15-12:45. Staff.
A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.
COMM 352 Science Writing for the Mass Media
Fall. 3 credits. Not open to freshmen. Limited to 25 students. Prerequisite: one college writing course.
lecs, M W; 9:05. Lab, F to be arranged. B. Lewenstein.

How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

## COMM 354 Print Media Laboratory

Fall. 3 credits. Limited to junior, senior, and graduate communication majors. Prerequisite: COMM 232, 250, or 350.

R 1:25-4:25. J. E. Hardy and staff.

Writing, editing, and layout principles practiced in publishing the Cornell Countryman. Some additional outside work will be required. Students will use microcomputers.

COMM 356 Print Media Laboratory
Spring. 3 credits. Limited to junior, senior, and graduate communication majors Prerequisite: COMM 232, 250, or 350.

R 1:25-4:25. J. E. Hardy and staff. A continuation of Communication 354 Students will use microcomputers.

COMM 357 Advanced Reporting Fall and spring. 3 credits. Limited to 12 juniors and seniors.

T 1:25-4:25. Staff.
A course in sophisticated reporting techniques for students with basic reporting and newswriting skills. Students work independently on producing news stories of publishable merit. The emphasis is on information gathering, conducting document searches, document authentication, and identification of experts. Not open to graduate students.

## COMM 360 Scientific Writing for Public Information

Fall and spring. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: lecs, M W F 9:05, J. E. Hardy and staff, T R 9:05 and W 11:15, T R 10:10 and W 12:20, J. E. Hardy and staff. Spring: M W F 9:05, J. E. Hardy and staff, T R 10:10 and W 12:20, J. E. Hardy and staff
An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media, or writing for scientists

## COMM 363 Organizational Writing

Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course

M W F 11:15 and 12:20. L. VanBuskirk, and staff.
Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representative of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on the Exxon Valdez oil spill and other case studies.

## [COMM 365 Writing in the Sciences and

 EngineeringSummer only. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Not offered 1994-95.

M W F 10:10. Staff.
Students write scientific or technical material for colleagues in their own field. The objective is clear, concise writing, with attention to grammatical construction, usage, paragraph development, and organization. Weekly writing assignments include scientific or technical instructions, descriptions of equipment and procedures, definition and explanation of concepts, graphic presentations and discussion of data, abstract and summary,
memorandum, research proposal, progress report, and research report.]

## COMM 368 Editing

Spring. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM $250,350,352$, or 360.

W F 10:10-11:25. J. E. Hardy Students will follow the process that takes a manuscript from final draft to page proof. Emphasis will be on copy editing, proofreading, fitting copy, working with authors, making editorial decisions, and developing skill in critical reading. Appropriate for any student who expects to work with manuscripts or do editorial work.

## COMM 375 Communication Planning and Strategy I

Spring. 3 credits. Limited to 35 juniors and seniors. Prerequisite: COMM 272 or permission of instructor.

Lec, T R 10:10-12:05. P. Yarbrough. Theories that guide and influence the solutions to public relations and public information problems in agriculture, business, government, social welfare, and other organizations. Examination of the process of the formation of public opinion. Discussion of research techniques and communication tools used in communication planning, and fundamentals of developing a communication plan. Case studies and projects.

## [COMM 376 Communication Planning and Strategy II

Spring. 3 credits. Limited to 25 juniors and seniors. Prerequisite: COMM 375 or permission of instructor. Not offered 1994-95.

Lec and lab, T R 10:10-11:40. C. Glynn. A continuation of Communication 375. Focus is on the development and implementation of actual communication campaigns. Students work closely with a community organization in designing and implementing a communication program.]

## COMM 380 Independent Honors

 Research in Social Science Fall or spring. $1-6$ credits. Limited to undergraduates who have met the requirements for the honors program.$B$. Lewenstein.

## COMM 382 Methods of Communication

 ResearchSpring. 3 credits. Limited to 20 junior, senior, or graduate communication majors; others by permission of instructor. Prerequisite: COMM 116 or 120 or permission of instructor.

Spring: M W 12:20, sec. 01, W 1:25-3:20,
sec. 02, F 10:10-12:05. P. Yarbrough. An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful. Lectures concurrent with COMM 682 to promote interaction and learning across levels.

## COMM 402 Advanced Argumentation and Debate II

Fall and spring. 2 credits. Limited to $10-15$ Program in Speech and Debate members; permission of instructor required.

To be arranged. P. Stepp.
The second course in a year-long sequence that considers formal argumentation through lectures, readings, and practical exercises
including computer-aided case research, the construction of affirmative and negative debate cases, preparation of briefs, and participation in intercollegiate tournaments. The second semester places additional emphasis on argumentative and on general theories of argumentation.

## COMM 403 Advanced Public Address II

Fall and spring. 2 credits. Limited to $10-15$ Program in Speech and Debate members; permission of instructor required.

To be arranged. P. Stepp.
The second course in a year-long sequence Students prepare and present speeches not covered in introductory courses, including limited preparation events (e.g., extemporaneous speaking, in which one composes and presents a speech on current events within a 30-minute period); rhetorical criticism (students apply analytic tools to extant speeches to reveal their structure and intent); and special events, which typically involve unusual constraints upon the speaking situation. Students also do advanced work in informative and persuasive speech. Students prepare a minimum of four different kinds of speeches for tournament presentation.

## COMM 405 Communication and

 Leadership Challenge: Enrichment through InvolvementFail and spring. 2 credits. Limited to $10-15$ Program in Speech and Debate members; permission of instructor required.

To be arranged. P. Stepp. Students share their communication and leadership talents in structured experiences of help to others. They design and implement speech or debate projects for the benefit of one or more groups in our increasingly diverse population. Our students could create instructional modules with accompanying instructional materials for use in area schools and for local CATV and could appear at area public schools to demonstrate and teach their particular skill.

## COMM 410 Organizational Behavlor and

 CommunicationFall or summer. 3 creclits. Iabs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent.

Lec, T R 12:20; sec 01, W 12:20-2:15; sec.
02, R 2:30-4:25. D. Schwartz.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 510; graduate students should enroll in COMM 510.

## COMM 411 Leadership from a

Communication Perspective
Fall and spring. 3 credits. Limited to 30 students.

T R 12:20-2:15. P. Stepp and B. Earle. Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

## COMM 416 Psychology of

 CommunicationFall. 3 credits. Prerequisite: COMM 116, introductory psychology, or permission of instructor.

T R 10:10-11:25. N. E. Awa.
An advanced multidisciplinary study of psychological and sociological primary source materials that have influenced the development of communication theories and paradigms. Topics include thetoric and persuasion, power of language in advertising and social communication, behaviorism and social learning theories, attitudes and behavior, personal interaction, and effectiveness of messages. Students are expected to develop critical thinking skills for analyzing the work of major communication theorists.

## [COMM 418 Communication and

## Persuasion

Spring. 3 credits. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology, COMM 382 or other introductory research methods course. Not offered 1994-95.

M W F 11:15 (one evening mid-semester prelim). M. Shapiro.
The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.]

## COMM 420 Public Opinion and Social

 ProcessesFall. 3 credits. Prerequisite: COMM 382; limited to seniors

T R 10:10-11:25. C. Glynn.
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620. Graduate students should enroll in COMM 620.

## COMM 421 Communication and the Environment

Spring. 3 credits. Limited to 20 junior, senior, or master's students or permission of the instructor.

T R 10:10-11:25. C. Glynn.
Students will investigate how values, attitudes. social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: Introductory psychology and COMM 120; COMM 382 or other introductory research-methods course

M W F 12:20 (one evening mid-semester
prelim). M. Shapiro.
A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622

## COMM 426 Ethics in the Media

Fall. 3 credits. Prerequisites: COMM 120 or permission of instructor.

Lecs, T R 9:05-10:35. L. Van Buskirk Course will examine the moral questions of deception, trade-offs in public vs. private interests, and manipulation in the context of specific issues arising in the daily operation of the media. Students will read or view cases, usually in advance of class, in preparation for discussion. In addition, there will be assigned readings in moral philosophy and ethics as background for case discussion. Requirements for the course are two papers, due midterm and at the end of the semester. Students from disciplines outside communication are encouraged to enroll.

## COMM 428 Communication Law

Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor.

M W F 11:15. D. A. Grossman. A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, and other issues of current interest

## COMM 439 Interactive Multimedia:

Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor

Lec, T 10:10-1:10. G. Gay
An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.
COMM 460 Video Communication I: Basic Concepts and Theory, Planning, and Participatory Production
Summer only. 2 credits. Fee: $\$ 50.00$.
T R 9:00-4:00. S. White.
The course focuses on understanding video as a tool in development communication. Hands-on instruction covers use of the video portapak and editing systems. Participants produce videotapes emphasizing the power of images, video for individual feedback, group process ohservation, and process intervention for individual and community development.

COMM 461 Video Communication II: Video for Development/Social Intervention
Summer only. 3 credits. Prerequisite: COMM 460 or equivalent. Fee: $\$ 50.00$

M W F 10:00-1:00. S. White and staff. The use of video in participatory message construction within the context of development. In addition to classroom instruction, participants work as production teams with "grass-roots" groups to create a videotape design to meet a development objective.

## [COMM 465 Scientific Rhetoric

Spring. 3 credits. Not offered 1994-95.
T 2:30-4:30, discussion to be arranged.
B. Lewenstein, P. Dear.

Exploration of the development of scientific discourse since the Scientific Revolution, with special emphasis on understanding the rhetorical purposes served by differing forms and techniques both in historical context and in contemporary science. Readings will include classics from Newton, Darwin, Einstein, and others, along with representative samples of more routine scientific communications. Students will prepare brief reports and mid-term and final papers.]
COMM 466 Public Communication of Science and Technology
Fall. 3 credits. Limited to 15 students. Prerequisite: Comm 352 or 360 , or Engineering 350 , or permission of instructor.

W 1:25-4:25. B. Lewenstein.
Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/ discussion

## COMM 487 Communication, Mood, and

 EmotionFall. 3 credits. Prerequisites: COMM 382 or equivalent

M W F 1:25. D. McDonald. An examination of theory and research on communication and emotion. The course consists of the following seven areas: defining mood and emotion, tactics for investigation, emotion and cognition, mood and emotion as communication effects, communication as consequence, communication and mood management, and enduring issues. Lectures concurrent with COMM 687; graduate students should enroll in COMM 687.

## COMM 494 Special Topics in

Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

## COMM 496 Internship

Fall, spring, summer, and intersession. 1-3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: Limited to communication juniors or seniors, 3.0 average in communica-
tion courses, and approval of academic advisor. S-U grades only.

Arranged. Staff.
Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internships must be approved in advance by the student's academic adviser and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required

## COMM 497 Individual Study in Communication

Fall or spring. 1-3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Group or individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

## COMM 498 Communication Teaching Experience

Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average ( 2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall).

Hours to be arranged. Staff. Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to ading with the actual instruction, each student prepares a paper on some aspect of the course.

## COMM 499 Independent Research

Fall or spring. 1-3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

## COMM 510 Organizational Behavior and Communication

Fall. 3 credits. Limited to seniors and graduate students. COMM 116 suggested. Lecs, T R 12:20; sec, W 3:00-5:00.
D. Schwartz.

Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks,
and interpersonal communication in an organizational context. Communication audit for a local organization conducted in section. Lectures concurrent with COMM 410; students in COMM 510 must enroll in the 3:00-5:00 W section and will have more advanced readings and exams.

## COMM 610 Seminar in Organizational

 CommunicationSpring. 3 credits. Prerequisites: COMM 410 / 510 or one course in organizational behavior.

T R 12:20-2:15. D. Schwartz
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisoremployee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks

## COMM 611 Communication for Renewal

 and ChangeFall. 3 credits. Prerequisite: Graduate or senior status and permission of instructor. M 1:25-4:25. S. White.
Experiential course focuses on the individual's need to reflect on experiences with interpersonal, intra group communication processes to understand human communications in an organization. Concepts and variables critical to participatory organizational development, renewal and change. Experiences are grounded in theory and research, relevant to understanding human behavior and communication in organizational contexts.

## COMM 612 Intercultural and

## Development Communication

Fall. 3 credits

> T 1:25-4:25. N. E. Awa

The course traces the imprint of culture in its effects on communication between people and groups from different backgrounds and assesses the role of communication in programs of social change and development. The first part of the course deals with perception, language, beliefs, attitudes, and world view (or what we bring to intercultural transactions) from a multidisciplinary social science perspective. The second part focuses on communication (interpersonal, and mass and traditional media) in technology transfer in agriculture, education, family planning, nutrition, and the like. The subtleties and complexities of nonverbal codes are explored and barriers to effective listening in intercultural trade and business broached.
COMM 616 Interpersonal Communication Spring. 3 credits. Limited to graduate students in communication; others by permission of instructor.

M W 10:10-12. N. E. Awa. The seminar explores foundational theories and principles of interpersonal communication as well as theories and methods in the newly emerging area of social cognition. Together, these groups of theories seek to explain human communicative behavior in a variety of settings through understanding of the cognitive processes and mental activities that undergird such behavior. In addition to theory, students will engage in experiential learning activities designed to provide balance between principles and practice. Topics covered include: the nature, structure, and functions of interpersonal communication; expectancy formation and development; stereotyping and attribution; perception, attention and memory; and the cognitionbehavior relationship.

## [COMM 618 Communication and

## Persuasion

Spring. 3 credits. Limited to graduate students. Prerequisites: introductory research methods or statistics. Not offered 1994-95.

M W F 11:15 (one evening mid-semester prelim). M. Shapiro.
The course focuses on theories of communication influence or persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/ public information, and interpersonal communication. Graduate students will meet weekly (by arrangement) and will complete additional readings and assignments. Taught concurrently with COMM 418.]
COMM 620 Public Opinion and Social Processes
Fall. 3 credits. Limited to seniors and graduate students.

T R 10:10-11:25. C. Glynn.
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication, and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications, analysis and interpretation of public opinion polls, and trends in public opinion on specific issues. Taught concurrently with COMM 420. Graduate students will complete additional readings and assignments.

## COMM 622 Psychology of Television

Fall. 3 credits. Limited to seniors or graduate students. Prerequisites: introductory research methods or statistics.

M W F 12:20 (one evening mid-semester prelim). M. Shapiro.
A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), and future forms of mass media including multimedia and virtual reality. Taught concurrently with COMM 422. Graduate students will meet weekly (by arrangement) and will complete additional readings and assignments.

## COMM 624 Communication in the Developing Nations

Fall. 3 credits. Open to seniors and graduate students.

Lec, R 1:25-4:25. R. D. Colle. The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication.

COMM 625 Communication for Social Change
Summer only. 3 credits. Fee: $\$ 50.00$. T R 9:00-1:00. Staff.
A survey of international communication problems and perspectives on social change, with a special focus on the Third World Concentration on critical issues of communication policy and planning at local, national, and international levels. Extensive use of case studies.

## COMM 626 Impact of Communication Technologies

Fall. 3 credits. Open to seniors.
W F 12:20-2:15. P. Yarbrough.
A study of emerging technologies of communication, such as computer-based information systems and satellites and their potentials for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television.

## COMM 640 Social Design of Communication Systems

Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional.

T 12:20-3:20. G. Gay.
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

## [COMM 665 Scientific Writing for

 ScientistsSummer only. 3 credits. Prerequisites: research in progress and permission of instructor. Not offered 1994-95.

T R 8:30-9:55. Staff.
Workshop for students with research in progress. Discussion and lectures on writing a journal article, thesis, report, and proposal; on objectives in scientific writing, relation of rhetoric and linguistics to scientific writing, process of publication and reviewing, and preparation of tables and illustrations; and on advanced and special problems in organization, paragraph development, sentence structure, and usage.]

## COMM 676 Communication Planning and Strategy

Spring. 3 credits. Primarily for graduate students but open to seniors.

T R 10:10-12. C. Scherer.
Seminar in the planning of communication activities for the support of directed socialchange programs. Examines communication and social theories, case studies, and planning models. Participants produce a comprehensive communication plan designed to solve a significant (real) communication problem. Case studies and discussion focus on communication problems from nutrition and health, rural development programs, marketing, nonformal education programs, and corporate and government public information campaigns.

## COMM 680 studies in Communication

Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor.

M W 9:05-10:45. Staff.
A review of classical and contemporary readings in communication, including key
concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

## [COMM 681 Seminar in Psychology of

 CommunicationSpring. 3 credits. Prerequisite: graduate students in communication; others by permission of instructor. Not offered 1994-95. Lecs, T 3:35-4:25 and R 2:30-4:25.
M. Shapiro.

An introduction to theory and research in the mental processes of the communicating individual. Discussions and readings may include how individuals process and remember communication information, how communication information is used in decision processes, how motivation influences processing of mass communication information, and how attitudes form and change.]

## COMM 682 Methods of Communication

 ResearchSpring. 3 credits. Limited to graduate students.

M W 12:20, sec. F 12:20-2:15.
P. Yarbrough.

An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, lextual, experimental and ethnographic research methods.

## COMM 683 Quantitative Research

 Methods in CommunicationSpring. 3 credits. Prerequisite: COMM 682 or equivalent.

Lec, M 12:20-3:30. D. McDonald. Practical experience in quantitative social science research techniques. Course topics include design and measurement, data collection, data preparation, data analysis and hypothesis testing, and interpretation of results. Secondary analyses of available data sets are conducted within each topic area. The course provides an introduction to the use of several common statistical software packages.

## COMM 684 Qualitative Methods in Communication Research

Spring. 3 credits
W 12:20-3:30. R. E. Ostman.
This course explores the nature of communication research and the place of qualitative methods in that research. Through readings, discussions, and papers, students will examine the various techniques of qualitative research, gaining both an introduction to those methods and an appreciation of when those methods are appropriate for addressing particular issues in communication.
COMM 685 Training and Development: Theory and Practice (also Education 685, International Agriculture 685) Spring and summer. 4 credits. Charge for materials, \$45.

Lec, F 9:05-12:05; lab, 1 hour per week, to
be arranged. R. Colle, I). Deshler,
M. Ewert.

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in smallfarm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and leaders of national and local rural and agricultural development programs. Materials focus on programs in the U.S. and abroad,
with greater emphasis on "developing" nations.

## COMM 687 Communication, Mood and Emotion

Fall. 3 credits. Limited to seniors and graduate students. Prerequisites: COMM 382 or equivalent.

M W F 1:25. D. McDonald. An examination of theory and research in the area of communication and emotion. The course consists of the following seven areas: defining mood and emotion; tactics for investigation; emotion and cognition; mood and emotion as communication effects; communication and consequences; communication and mood management; and enduring issues. Taught concurrently with COMM 487. Graduate studients will meet weekly (by arrangement) and will complete additional readings and assignments.

## COMM 688 Participatory Communication

 for Research and Development Summer only. 3 credits. Prerequisites: Qualitative research or graduate-level communication course and/or permission of instructor.Lecs, T R 1:00-5:00; disc, arranged 2
hours/week. S. White.
Conceptual framework and theoretic rationale for utilizing participatory approaches in communication and research for rural development and social action. Case examples and video documentation from India, Africa, Latin America. Focus is on problem-solving approaches in communication and use of video as a communication tool for enhancing people's participation in the development context.

## COMM 693 Seminar: Topics in Communication

Fall and spring. No credit. S-U grades only. To be arranged. Staff. some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

## COMM 694 Special Topics in

 CommunicationFall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor.

Hours to be arranged.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.
COMM 710 Methods of Communication Analysis in Organization(s)
Spring. 3 credits. Prerequisite: Comm 610 or equivalent and one graduate level course in organizational behavior.

M W 3:35-5:05. D. Schwartz.
Methods for analyzing communication structure and processes in organizations with emphasis on communication network analysis and forms of intervention research such as communication audits and employee attitude surveys.

## COMM 792 Advanced Communication

 StudiesFall or spring. 3 credits. Limited to communication graduate students. May not be repeated. Students must use the faculty member's section number to register. Graduate faculty.

Independent studies and projects are carried out in conjunction with selected undergraduate courses.

## COMM 794 Seminar in Communication

 IssuesFail, spring, or summer. 1-3 credits.
Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.
COMM 797 Graduate Independent Study
Fall, spring, or summer. 1-3 credits.
Prerequisite: permission of instructor.
Hours to be arranged. Staff.
Individual study concentrating on locating, assimilating, synthesizing, and reporting
existing knowledge on a selected topic.

## COMM 798 Communication Teaching Laboratory

Fall and spring. 1-3 credits each semester. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register.

Graduate faculty.
Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.
COMM 799 Graduate Research
Fall, spring, or summer. 1-3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor.

Hours to be arranged. Graduate faculty. Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

## COMM 899 Directed Graduate Study

Fall or spring. 3-6 credits. S-U grades only. Students must use the faculty member's section number to register.

Graduate faculty.

## EDUCATION

H. D. Sutphin, chair; A. L. Berkey, W. S. Carlsen, J. Confrey, D. Deshler, J. A. Dunn, J. R. Egner, D. M. Ewert, J. H. Gould, E. J. Haller, D. E. Hedlund, J. McGonigal, J. Millman, D. H. Monk, J. D. Novak, D. Peasley, S. Piliero, G. J. Posner, R. E. Ripple, D. E. Schrader, K. A. Strike, D. J. Trumbull

## EDUC 005 Basic Review Mathematics

Fall. 3 credits (this credit is not counted toward the 120 credits required for the degree). Primarily for entering students.

Fall: M W F 8:00, 9:05. S. Piliero. Introduction to concepts necessary for success in EDUC 115 and basic statistics courses. Topics include problem solving, factoring rational expressions and equations, linear and quadratic functions, trigonometry and logarithms. Considerable emphasis is placed on learning to learn mathematics for understanding and on comprehending word problems.

## EDUC 115 Introductory College

 MathematicsFall or spring. 4 credits.
Lecs, M W 11:15 or 12:20; labs, R 8-9:55,
$10: 10-12: 05,12: 20-2: 15,2: 30-4: 25$, or $F$
8-9:55, 10:10-12:05, 12:20-2:15. S. Piliero.
Designed to give students with sound high school mathematics backgrounds a unified treatment of the basic concepts of college algebra, trigonometry, and geometry. Considerable emphasis is placed on the concept of function, graphing, problem solving, and applications. Contextual problems and the multi-representational tool Function Probec are used to enhance students' mathematical understanding.

## EDUC 120 Education for Empowerment

 Spring. 1-3 credits.T R 2:30-4. M. Ewert, J. Egner, J. Dunn. A modular course, with each module spanning 5 weeks for 1 credit. Common themes running through the modules include human learning, teaching strategies, political/ social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

## EDUC 210 Psychology of Learning and Memory

Fall. 3 credits. Prerequisite: introductory psychology.

> M W F 10:10. J. A. Dunn.

This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

## [EDUC 211 Psychology of Individual

 DifferencesFall. 2-3 credits. S-U option available. Prerequisite: introductory psychology. Not offered 1994-95.

M W F 12:20. J. A. Dunn.
An introductory course focused on basic concepts in the psychology of individual differences applicable to the teaching/leaming process. Topics include: intelligence, personality, motivation, cognition, memory, psychological testing, and measurement.]
EDUC 212 Psychological Foundations of Education
Spring. 2-3 credits. S-U option available. Prerequisite: introductory psychology. W 2-4:25. J. A. Dunn.
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

## EDUC 240 The Art of Teaching

Fall and spring. 3 credits.
T 2:30-4:25 or W 2:30-4:25. 2-hour fieldwork to be arranged. Enrollment limited. Not open to freshmen.
J. R. Egner, G. J. Posner, and staff. This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from
school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

## EDUC 247 Instructional/Informational Application of Microcomputers and Related Technologies

Fall or spring. $2-3$ credits. Not available to students who have completed ABEN 102 or NR 107.

> R 2:30-3:20; lab to be arranged. D. Peasley

This course provides an introduction to instructional/information applications and strategies for using microcomputers and related technologies in public and private education and in the private sector. The course also helps students learn to use technologies to enhance their college studies. Wordprocessing, spreadsheets, databases, hypertext, development of electronic database searching, electronic networking, communications and desktop publishing are covered. Module A (1 credit) is the first seven weeks of the semester, focused on Macintosh technology. Module B (1 credit) is the second seven weeks, focused on IBM-compatible and related technologies. For Module C (1 credit) students propose and complete an approved special project related to the class.

EDUC 271 Sociology of Education Fall. 3 credits. Limited enrollment.
S-U grades optional.
T R 10:10-11:30. E. J. Haller.
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

## EDUC 302 Observing Science and Math

 InstructionSpring. 3 credits. Prerequisite: enrollment in a teacher education program or permission of instructor.

W 2-4:25. W. S. Carisen and A. Solomon. The study of a variety of methods for recording and understanding science and mathematics teaching and learning. By reading and conducting research from a variety of analytic/interpretive paradigms, students will approach the familiar world of the secondary classroom with fresh perspectives. The course will include a final project that involves observing and evaluating a case of teaching. Students enrolled in teacher education programs will be expected to focus on their own teaching for the final project.

## [EDUC 310 Psychology of Instructional System Design

Fall. 2-3 credits. Prerequisite: EDUC 210 or permission of instructor. Not offered 1994-95. M W 11:15, hour to be arranged.
J. A. Dunn.

The course reviews the relevance of theories of learning and issues in the study of learning to the technology of instruction. Various examples of instructional systems will be considered. Student projects and lahoratory exercises will be required.]

## EDUC 311 Educational Psychology

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional.

Fall: M W F 11:15. D. E. Schrader.

This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context and knowledge, schools and other learning environments, and education as a social, moral and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and leaming in various educational contexts.

## [EDUC 312 Learning to Learn

Spring. 3 credits. Prerequisite: one or more courses in psychology or educational

## psychology. Not offered 1994-95

T R 9:05. J. D. Novak
This course is intended for persons interested in the improvement of their learning strategies and the application of new ideas and methods to improve educational programs. Lectures and discussions are based on assigned readings and the contributions of class members. The major focus of the course is how and why concepts play a central role in human learning. Concept mapping and other strategies for educating will be used. Students will apply principles and methodologies in a project related to their interests.]

## [EDUC 317 Psychology of Adolescence

Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. Not offered 1994-95.

M W (Fridays to be arranged) 11:15. D. E. Schrader.

This course surveys the nature of adolescent cognitive, social, moral, and self-development Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.]
EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1-3 credits. Letter grade only.
Lec, M 2-4:25; lab to be arranged.
D. Deshler, D. Foster, and J. Gould.

This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module Course activities include field observations and experiences during arranged times.

## EDUC 332 Instructional Methods in

 Formal and Non-formal Education Spring. 3 credits.M 2-4:25 and F 12:20-1:10. J. Gould. Selection, practice, and evaluation of methods in formal and non-formal education will be stressed. The course will focus on both general teaching strategies and methodology unique to teaching in schools and non-formal sertings. Course activities include microteaching and field experience during arranged times.

## EDUC 335 Youth Organizations

Spring. 3 credits.
Lecs, T R 10:10; lab to be arranged J. H. Gould.

The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purposes,
design, operation, and administration are surveyed, emphasizing the roles an adult volunteer leader may play. The course is designed to give students an in-depth, learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required

## EDUC 352 Reading Statistics

Fall or spring. 1 credit. Prerequisite for spring: concurrent registration in EDUC 353

$$
\text { Fall: T } 12: 20 \text {; spring: T R 8:30-9. }
$$

## J. Millman.

An introduction to statistical vocabulary and symbolism frequently used in reporting empirical research in education and other social sciences. Students are taught how to comprehend statistical terminology and results.
[EDUC 353 Introduction to Educational Statistics
Spring. 3 credits. Enrollment limited to 40 students. Prerequisite: EDUC 352 or concurrent registration, or permission of instructor

T R 9:05-11. J. Millman.
A study of common univariate and multivariate statistical procedures encountered in educational and psychological inquiry. Meaning of concepts and mastery of course content is emphasized; computational details are not. Microcomputers are used extensively in class to develop understanding of the properties of statistical indices.]

## EDUC 370 Issues in Educational Policy

 Spring. 3 credits.T R 10:10-11:30. K. A. Strike.
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

## EDUC 378 Political Economy of Education

Fall. 3 credits. S-U grades optional.
T R 12:20-2. D. H. Monk.
A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

## EDUC 380 Independent Honors Research in Social Science

Fall or spring. $1-6$ credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program.

## EDUC 401 Our Physical Environment

Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $\$ 7$.

T 1:25-4:25. V. N. Rockcastle. A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science.

Attention is paid to analysis for understanding and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

## EDUC 402 Knowing and Learning in

 Science and MathematicsFall. 4 credits. Prerequisite: enrollment in science and math certification program or permission of instructor.

W F 2:30-4:25. D. J. Trumbull. Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.
EDUC 403 Observing and Teaching Science and Math
Spring. 4 credits. Prerequisites: Enrollment in a Cornell teacher education program or permission of the instructor.

W F 3:15-5:15. William S. Carlsen. Designed for prospective secondary teachers, this course provides a multiple-perspectives orientation to the culture of schools and the work of teaching science and mathematics. Students spend 6-8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions concern models of instruction, teacher knowledge, educational equity and tracking, and classroom language.

## EDUC 411 Introduction to Educational

 MeasurementFall. 3 credits
T R 9:05-10:20. J. Millman.
Presents practices and theories of the measurement of human knowledge and performance. Students will be expected to acquire the practical skills of planning and constructing tests for a variety of purposes, interpreting and using test results, evaluating commercially available instruments, and the like. Students will also be expected to discuss intelligently a myriad of social, ethical, legal, and technical issues associated with educational testing. One course in statistics or concurrent registration in Education 352 is recommended but is not required.

## EDUC 413 Psychology of Human Interactlon

Fall. 3 credits. Enrollment limired. Prerequisite: permission of instructor. Fee, $\$ 5$.

T R 10:10-12:05. D. E. Hedlund. Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

## EDUC 414 Counseling Psychology

Spring. 4 credits. Limited to 30 students. Prerequisites: introductory psychology, social or personality psychology, and EDUC 413.

T R 10:10-12:05. D. E. Hedlund.
The processes of counseling are examined from various theoretical perspectives. Typical adult counseling issues are examined, and
implications are drawn for counseling strategies with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

## EDUC 420 Field Experience

Fall or spring. $1-4$ credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade

Staff.
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience

## EDUC 430 Special Problems in Agricultural Education

Fall, spring, or summer. 1-3 credits
S-U grades optional
Fall and summer: hours to be arranged; spring: T 8. A. L. Berkey and
H. D. Sutphin

An opportunity to study individually selected problems in agricultural education.

## EDUC 432 Teaching Agriculture:

 Methods, Materials, PracticeFall. 9 credits. Prerequisites: EDUC 332 and concurrent registration in EDUC 430 and 497.

M TW R F 8-3. A. L. Berkey and staff. Directed participation in teaching agriculture at the secondary school level. Program includes a five-day intensive on-campus period and periodic seminars addressing selected methods and materials in teaching agriculture, combined with a 14 -week period in an off-campus student teaching center Includes evaluation of area resources, instructional materials and facilities, planning and executing instruction, directing work experience, and advising youth organizations.

## EDUC 445 Curriculum Design Workshop

Fall. 3 credits. Not offered 1994-95.
T R 10:10-11:30. G. J. Posner.
A general practical approach to course planning, Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.]

## EDUC 472 Philosophy of Education

 Fall. 3 credits.T 2:30-4:25. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

## EDUC 475 Epistemology and Teaching

Spring. 3 credits. Letter grade only
T R 3:30-4:45. K. A. Strike
This course emphasizes the critical examina tion of recent debates in philosophy of science concerning the nature of scientific knowledge and scientific inquiry. It applies these inquiries to such questions as the organization of curricular materials, the nature of effective science teaching, and the role of scientific knowledge in the deliberations of a liberal democracy

EDUC 477 Law and Educational Policy
Fall. 3 credits
M 2:30-4:25. K. A. Strike
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions

## EDUC 481 Educating for Community Action

Spring. 3 credits

> M 1:25-4. M. Ewert.

The design and execution of educational aspects of community-action and nonformal education programs. Deals with the identification and statement of educational goals, selection of teaching strategies, and evaluation of outcomes.

EDUC 483 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional W 7:30-10:30 p.m. D. Deshler.
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

## EDUC 494 Special Topics in Education

 Fall or spring. 4 credits maximumS-U grades optional.
Hours to be arranged. Staff
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number

EDUC 497 Individual Study in Education
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall)

## Staff

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest

## EDUC 498 Undergraduate Teaching

Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge

EDUC 499 Undergraduate Research Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate
research credits elsewhere in the college. Limited to juniors and seniors with gradepoint averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

## EDUC 501 Communication Workshop

Summer and intersession. 2 credits. S-U grades optional

Lecs, M-F 9-12 and 1-4. Class meets six hours a day for five days. M. D. Glock. The course focuses on skills enabling individuals to cope with such concerns as motivation, dealing with difficult persons, criticizing productively, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled fifty-minute class periods. Additional autotutorial lab time is scheduled. Appropriate for anyone who works with people.

## EDUC 513 Interpersonal Interaction

 Summer. 1-2 credits1-week course. Hours to be arranged. D. Hedlund

Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

## EDUC 547 Improvement of College Teaching

Summer. 2 credits
1-week course, hours to be arranged J. I. Novak.

Concepts of teaching, learning, curriculum, and governance are used to guide practical activities that enhance faculty competence. Recent studies of concept mapping and learning, structure of knowledge, science teaching, adult learning, and evaluation provide a conceptual basis for improving teaching

EDUC 601 Secondary Science and Mathematics Teaching Practicum
Fall or spring. 3 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics program.

M T W R F 8-3. Staff.
Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

## EDUC 602 Teaching Science/

 Mathematics: Methods, Materials, PracticeFall. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor.

M F 9-12 and 1-3, first 5 weeks; last 10
weeks to be arranged. G. Posner, and staff.
The course begins with five weeks of
intensive consideration of theoretical
frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the next ten weeks require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

## [EDUC 603 Teaching Mathematics

Spring. 3 credits. Offered altemate years. Not offered 1994-95.

T R 10:10-11:25. J. Confrey.
Current research in mathematics education will be examined in order to develop a picture of the mathematics classroom that integrates subject matter, student conceptions, affective variables, and issues in the social context of learning mathematics. Special topics will include research on problem solving, women and mathematics, misconceptions, and research on teaching.]

## [EDUC 606 Seminar in Science and Mathematics Education

Fall. 1 credit. S-U grades only. Not offered 1994-95.

R 4:30. Staff.
Explores topics in science and mathematics education. The focus of the seminar changes each year.]

## EDUC 609 Educational Ethnography

Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor.

M W 2:30-4. D. J. Trumbull.
The course will study educational ethnography as a form of interpretive research, a perspective that attends to the complex interactions between researcher, researched, and context and accepts the centrality of meaning-making in the conduct of human affairs. Students will examine some of the philosophical debates about research approaches and will discuss research methods as they relate to the aims and assumptions of interpretive research. Students will conduct a joint research project during the course of the semester.

## EDUC 611 Educational Psychology

Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional.

M W F 11:15. R. E. Ripple.
A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-hased conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

## [EDUC 613 Theory and Methods for Education

Fall. 3 credits. Prerequisite: EDUC 311 or 611 or permission of instructor. Not offered 1994-95.

T R 9:05. J. D. Novak.
Presents a coherent theory of education combining concepts from philosophy, psychology of learning, curriculum, and instruction. New educational methods, including concept mapping and clinical interviews, will be presented. Students will gain competence by applying concepts and methods in projects related to their interests. Classes include discussion of student-initiated questions and use of videotape to analyze educational techniques.!

EDUC 614 Epistemological Development and Reflective Thought
Fall. 3 credits. S-U grades optional.
M 12:20-2:15; 1 hour to be arranged.
D. E. Schrader.

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored

## 【EDUC 615 Self and Interpersonal

 Development and EducationSpring. 3 credits. S-U grades optional. Not offered 1994-95.

Lec, M 12:20-2:15; 1 hour to be arranged. D. E. Schrader.

Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructivedevelopmental theories of self and others, and how such theories explain students' understanding of their own and others' actions in educational contexts.]

## EDUC 620 Internship In Education

Fall or spring. $1-6$ credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff.
An opportunity for practical experience in educational professions development.

## EDUC 621 Work-Experience Coordinator Certification Course I

Summer. 3 credits. S-U grades optional.
2 -week course. Hours to be arranged.
A. L. Berkey.

The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of workexperience programs including articulation with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

## EDUC 622 Work-Experience Coordinator

 Certification Course IISummer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I.

1-week M-F 8-5. Hours to be arranged.
Internship-3 wks. A. L. Berkey.
The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

## EDUC 630 Special Problems in

 Agricultural and Occupational EducationFall or spring; may also be offered in summer 1-3 credits. S-U grades optional.

Hours to be arranged. A. L. Berkey and staff.
The course provides an opportunity for graduate-level study of individually selected
problems and issues in agricultural and occupational education. Designed for experienced teachers.

## EDUC 632 Teaching Agricultural,

Extension, and Adult Education Spring. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor.

M 8-10. Staff.
The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

## [EDUC 633 Program Planning in

 Agricultural, Extension, and Adult EducationFall. 3 credits. Field trip. Not offered 1994-95.

Lec, T 2-4:30; lab to be arranged. Staff. Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.]
EDUC 644 Curriculum Theory and Analysis
Spring. 3 credits.
T R 2:30-4. G. J. Posner.
An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an indepth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 647 Instructional Technologies: Analysis and Practices
Fall. 2-4 credits. Prerequisite: skills in statistics and research design. Letter grade only.

R 2:30-3:45; lab and seminars to be
arranged. D. Peasley and H. D. Sutphin. Current research and literature on instructional computing and related technologies in the public and private sectors will be examined. Students complete a group research project on educational technologies and meet for five seminar sessions to earn 2 credits. The research experience includes design, data collection, input, analysis, and synthesis. Concurrent attendance in ED 247 Modules A and B is required ( 2 credits); or the modules may be taken as a prerequisite.

## EDUC 650 Methods of Educational Inquiry

Fall. 1 credit.
T 2:30-3:20. J. Millman.
A survey of approaches to inquiry in the social sciences, including experimental and comparative designs, survey research, case study, philosophical and historical inquiry, content analysis, and secondary data analysis. The course is intended to broaden the student's views of appropriate methods of disciplined inquiry.

EDUC 651 Writing a Thesis Proposal
Fall. 1 credit. S-U grades only.
T 3:35. J. Millman.
Procedures for developing and writing a master's or doctoral thesis proposal. Emphasis will be given to identifying a significant topic, conducting and describing a group miniresearch study, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided ample assistance in constructing a brief thesis proposal of their own.

## EDUC 659 Special Topics in Research Methods

Spring. $2-3$ credits. Prerequisite: permission of instructor. S-U grades only.

Hours to be arranged. J. Millman. Consideration of new techniques and current topics in educational research design, measurement, or evaluation of programs, products, and personnel.

## EDUC 661 Administration of Educational Organizations <br> \section*{Fall. 3 credits.}

W 3:35-6. E. Haller.
Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

## EDUC 664 Educational Finance

Fall. 3 credits. S-U grades optional.

> R 3:35-6. D. H. Monk.

An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

## EDUC 665 Administrative Decision

 MakingSpring. 3 credits. S-U grades optional. W 3:35-6. D. H. Monk.
An introduction to decision making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

## [EDUC 678 Planning Educational Systems

Spring. 3 credits. S-U grades optional. Not offered 1994-95.

T 2:30-4:25. D. H. Monk.
A seminar focused on a comparative analysis of educational planning as it is practiced in developing nations. Topics will include manpower planning, the social demand approach to educational planning, benefit-cost analysis, and incentive models of planning. The political and economic implications of attempts to plan education will be emphasized.]

## EDUC 679 Policy Issues in Higher

 EducationSpring. 3 credits. S-U grades optional. T 11:15-1:15. J. R. Egner.
Deals with administration of higher educational organizations. Current approaches to planning and analysis of special problems.

## EDUC 680 Foundations of Extension

 Adult EducationFall. 3 credits. Limited to 20 students. S-U grades optional.

F 9:05-12:10. D. Deshler.
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

## [EDUC 681 Designing Extension and

 Continuing Education ProgramsFall. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95.

T 1:25-4. Staff.
Designed to help students understand the concepts, principles, and procedures relevant to developing programs and curricula for the continuing education of adults. Emphasis is on such key areas as the nature and role of programming, situation analysis and needs identification, choosing among alternative courses of action, stating program objectives, and program organization.]

## EDUC 682 Community Education and Development

Fall. 3 credits. For students who have interest or experience in education or development programs in which community is an important concern.

Lec, M 1:25-4. M. Ewert.
An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

## EDUC 683 Administration of Nonformal

 EducationSpring. 3 credits.
W 1:25-4. J. R. Egner.
An overview of selected theories, principles, and strategies applicable to management of decentralized, professionally staffed, nonformal educational organizations and change agencies. Content includes management functions, managerial leadership and decision-making strategies. Particular attention is given to leadership of organizations with volunteer staff.

EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685 and Industrial and Labor Relations 658)
Spring. 4 credits. S-U grades optional.
Charge for materials, \$45.
F 9:05-12:05; lab/disc, once a week, to be arranged. R. Colle, M. Ewert, W. Frank. Analysis, design, conduct, administration, and evaluation of training programs for the
development of human resources in smallfarm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

## EDUC 690 Research Seminar

Fall and/or spring. No credit.
R 12:20. Staff.
Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

## EDUC 694 Special Topics in Education

Fall, spring, or summer. 1-3 credits.
Prerequisite: permission of instructor.
S-U grades optional.
Hours to be arranged. Staff.
Topics to be announced.
EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. $2-3$ credits.
M W 11:15. 1 hour to be arranged. J. A. Dunn.

This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from year to year. Students may take the course more than once.

## [EDUC 714 Moral Development and Education

Spring. 3 credits. S-U grades optional. Not offered 1994-95.

Lec, M 12:20-2:15; 1 hour to be arranged. D. E. Schrader.

This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.]

## EDUC 715 Seminar in Psychology and Education

Fall or spring. Variable credit. Prerequisite: permission of instructor.

R 1:25-3:30. D. E. Hedlund.
Selected topics focusing on the interaction of theoretical and research developments in psychology and education.

## EDUC 718 Adult Learning and Development

Fall or spring. 3 credits. Prerequisite;
permission of instructor. S-U grades optional.
W 2:30-5. R. E. Ripple.
Deals with adult development and learning behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Spring. 2 credits. S-U grades optional.
R 8-9:55. H. D. Sutphin, J. R. Egner, and staff.
Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

## [EDUC 735 Teacher Preparation in Agriculture

Fall. 3 credits. Prerequisite: teaching experience in agriculture. Not offered 1994-95.

W 1:25-3:20. Staff.
For persons with teaching experience interested in the preparation of occupational teachers. Involvement in the Cornell program of teacher preparation in agriculture is expected.]

## [EDUC 739 Evaluating Programs in

 Agricultural, Extension, and Adult EducationSpring. 3 credits. Field trip. Not offered 199495.

T 2-4:30; labs to be arranged. Staff. This course examines objectives, criteria, and strategies for evaluating programs of agricultural, extension, and adult education Evaluation models, case studies, and evaluation as a function of program planning are considered. Participants examine the roles of supervision in evaluation and have an opportunity to develop and apply evaluation instruments. Field trips and resource persons provide opportunities to observe actual evaluation problems and procedures.]

EDUC 744 Seminar in College Teaching Summer. 2-3 credits.

1-week. Hours to be arranged. J. Novak. This seminar will be specially designed for Latin college and university professors. It will begin with a review of the current status of knowledge on teaching and learning, presenting a theoretical foundation for education, and move to practice in solving specific teaching problems.

## EDUC 745 Seminar in Curriculum Theory

 and ResearchFall. 3 credits. Prerequisite: EDUC 644, or permission of instructor.

T 2:30-5:00. G. Posner.
Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform Both topics serve to uncover the relation between ideology and research.

## EDUC 762 Research in Eddcational

 AdministrationSpring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only.

R 3:35-6. E. J. Haller.
For students interested in learning about the process of formulating and carrying out a piece of empirical research. Studies will focus on policy and administrative issues concerning public education. Seminar participants will have access to large, nationally representative data sets that will permit them to conduct high-quality, publishable studies of U.S. schools, students, teachers, and parents. In the process they will learn some of the costs and benefits of secondary data analysis and gain some familiarity with statistical analyses on a Comell mainframe computer.

## [EDUC 772 Seminar in Philosophy of

 EducationSpring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Not offered 1994-95.

Hours to be arranged. K. A. Strike. Topics to be announced.]

## EDUC 783 Comparative Extension Education Systems

Summer. 3 credits. S-U option.
1-week. Hours to be arranged. M. Ewert Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and researchextension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

## [EDUC 784 Educational Technology.

Transfer and Decision Making
Fall. 3 credits. Offered odd years only. Not offered 1994-95.

M 11:15-1:10. H. D. Sutphin,
J. McGonigal, and staff.

The educational and program management decisions involved in the adoption of educational technology in extension, rural development, and nonformal education programs are reviewed, and a variety of decision-making approaches is explored. An overall problem-solving method with case study illustrations is used. Consideration is given to structure and operating style of the educational organization, as well as to the characteristics of the technology under consideration. The course makes use of recent literature and continuously updated files on current developments in technology applications.]

## EDUC 800 Master's-Level Thesis Research

Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work.

Staff.

## EDUC 900 Doctoral-Level Thesis Research

Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work.

Staff.

## Related Course in Another Department

Historical Roots of Modern Psychology (PSYCH 490)

## ENTOMOLOGY

G. C. Eickwort, chair; P. L. Davis, P. P. Feeny,
C. Gilbert, M. P. Hoffmann, J. K. Liebherr,
R. A. Morse, L. A. Patrican, B. L. Peckarsky,
D. Pimentel, R. B. Root, R. T. Roush,
D. A. Rutz, J. P. Sanderson, J. G. Scott,
A. M. Shelton, E. J. Shields, M. J. Tauber,
W. M. Tingey, S. Via, Q. D. Wheeler

## Courses by Subject

Apiculture: 260, 264
Behavior: 471, 662
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 200, 212, 215
Medical entomology and veterinary entomol-
ogy: 352, 653
Morphology: 322
Pest management: 241, 342, 441, 444, 472, 640, 677
Physiology and toxicology: 370, 483, 490. 685 Systematics and acarology: 331, 332, 453, 621, 631, 634, 636, 674

## [ENTOM 200 Cultural Entomology

Fall. 2 credits. S-U grades optional. Intended for students in all colleges. Not offered 1994-95.

Lecs, T R 10:10. Staff.
A presentation of the insects, with attention to their roles in nature and in civilization. Biological, historical, social, economic, and

## culcural aspects are discussed.]

## ENTOM 212 Insect Biology

Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent.

Lecs, W F 11:15; lab, T W or R 1:25-4:25.
J. K. Liebherr.

Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A small collection emphasizing ecological and behavioral

## categories is required

## ENTOM 215 Life on a Silken Thread: Biology of Spiders

Fall. 2 credits. Prerequisite: Introductory biology or permission of instructor. S-U grades optional.

Lecs, M W 1:25. L. S. Rayor. An introduction to the fascinating world of spiders. The course will examine the evolution, ecology, behavior, and physiology of spiders from a modern perspective. Topics will include the identification of major spider families, the use of silk, their diverse life-styles in temperate and tropical ecosystems, risky courtship, predatory behavior, social spiders, sensory physiology and communication, development, and potential for use in integrated pest management.
ENTOM 241 Applied Entomology
Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent.

Lecs, T R 9:05; lab-disc, T W or R
12:20-3:15 R T R 12:20-3:15. R. T. Roush. Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

## ENTOM 260 Introductory Beekeeping

## Fall. 2 credits.

Lecs, T R 11:15. R. A. Morse.
Introduces the fundamentals of practical beekeeping, including the life history,
physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

## ENTOM 264 Practical Beekeeping

Fall. 1 credit. Limited to 20 students Prerequisite: ENTOM 260 (may be taken concurrently).

Lab, R 2-4:25. R. A. Morse
This course consists of fourteen laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees for apple pollination, honey harvesting and processing, and disease identification and control.

## ENTOM 322 Insect Morphology

Spring. 5 credits. Prerequisite: ENTOM 212 or 241 . Offered alternate years. Not offered 1995-96.

Lecs, M W F 9:05; labs, M W 1:25-4:25.
G. C. Eickwort.

An introduction to the external and internal anatomy of insects, with emphasis on the comparative and functional aspects. The laboratory is devoted largely to dissection.

## [ENTOM 331 Introductory Insect

 SystematicsSpring, 4 credits. Prerequisite: ENTOM 212 Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10; labs,T R 1:25-4:25
Q. I. Wheeler.

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.]

## [ENTOM 332 Systematics Discussion

 GroupSpring 1 credit. Prerequisite: concurrent enrollment in ENTOM 331 or permission of instructor. S-U grades only. Offered alternate years. Not offered 1994-95.

Disc, hours to be arranged.
Q. D. Wheeler.

Readings and discussion on topics in
systematics coordinated with the lecture series in Entomology 331.]

## ENTOM 342 Special Topics in Economic

 EntomologyFall or spring. Hours to be arranged. Staff.
Topics to be announced.

## ENTOM 352 Medical and Veterinary Entomology

Fall. 3 credits. Prerequisites: BIO G 101-102 or equivalent. S-U grades optional. Offered alternate years. Not offered 1995-96.

Lec, T R 10:10; lab, R 1:25-4:25.
L. A. Patrican.

The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease. The laboratory involves 2 field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen and the source of a blood meal.

ENTOM 370 Pesticides, the Environment, and Human Mealth (also Toxicology 370)

Fall. 2 credits. Prerequisites: B1O G 101-102 or equivalent. Offered alternate years. Not offered 1995-96.

Lecs, T R 9:05. J. G. Scott.
A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

## [ENTOM 441 Seminar in Insect Pest

 ManagementSpring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Offered alternate years. Not offered 1994-95

Hours to be arranged. M. P. Hoffmann,
A. M. Shelton

Discussion and analysis of current topics in insect pest management.]

## ENTOM 444 Integrated Pest

 Management (also Plant Pathology 444)Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 301 or their equivalents or permission of instructor

Lecs, M W F 9:05; lab, M or W 1:25-4:25. P. A. Arneson.

Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

## ENTOM 452 Herbivores and Plants:

 Chemical Ecology and Coevolution (also BIOES 452)Spring. 3 credits. Prerequisites: One year of introductory biology; BIOES 261; CHEM 253 or $357 / 358$ and 251 or 301 ; or permission of instructor. Offered "odd" spring semesters.

Lec, M W 11:15-12:05; disc, F 11:15-12:05. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals; especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

## [ENTOM 453 Principles and Practice of Historical Biogeography (also BIOES 453)

Fall. 3 credits. Prerequisite: A course in systematics or permission of instructors. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10; lab/disc. R 2:30-4:25.
J. K. Liebherr and M. Luckow

A survey of methods and techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological analytical methods. Summaries of geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.]
[ENTOM 455 Insect Ecology, Lectures (also BIOES 455)
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. Offered alternate years. Not offered 1994-95.

Lecs, W F 11:15 and 1 hour of discussion weekly to be arranged. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

## ENTOM 456 Stream Ecology (also BIOES

 456)Spring. 4 credits. Recommended: BIOES 261. S-U grades optional. Offered alternate years. Not offered 1995-96.

Lecs, T R 9:05; labs, T, W, or R 1:25-4:25
(3 sections). B. L. Peckarsky and
M. B. Bain.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. Lab: A field project includes descriptive and experimental techniques and hypotheses testing related environmental assessment.

## ENTOM 470 Ecological Genetics (also

 BIOES 470)Spring. 4 credits. Prerequisite: BIOES 378 or consent of instructor. S-U grades optional Offered altemate years. Not offered 1995-96

Lecs, T R 10:10-11:30; disc, $1 \mathrm{hr} / \mathrm{wk}$ to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations
Topics include consequences of genetic variation in age-structured populations, demographic concepts of fitness, evaluation of methods for measuring genetic variation and natural selection on ecologically important traits, genetics of competitive ability and predator avoidance, genetic and ecologic aspects of phenotypic plasticity, character displacement, maintenance of genetic variability, and limits to selection. We will consider how theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations and evaluate experiments designed to test such hypotheses.

## [ENTOM 471 Freshwater Invertebrate

 BiologySpring. 5 credits. Recommended: ENTOM 212. Offered alternate years. Not offered 1994-95.

Lecs, T R 9:05; labs, T R 1:25-4:25. B. L. Peckarsky.

The lecture explores the morphology, physiology, phylogeny, life histories, behavior, feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. The laboratory involves field collections and laboratory identification of invertebrates and stresses the use of keys. Students prepare a collection of freshwater invertebrates.]

## ENTOM 472 Genetics of Pest

Management
Fall. 4 credits. Prerequisite: BIOGD 281 or equivalent. S-U grades optional. Offered alternate years. Not offered 1995-96.

Lecs, T R 12:20-1:45; lab to be arranged
(3 hours). R. T. Roush.
A detailed survey of the application of genetics to pest management. Includes discussion of host plant resistance, pesticide resistance, insect mass rearing technology, autocidal controls (e.g., sterile males), and the establishment and genetic improvement of biological control agents, with examples from plant pathology, weed science, and entomology.

## ENTOM 483 Insect Physiology

Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Offered alternate years. Next offered 1995-96.

Lecs, M W F 11:15; lab, W 1:25-4:25, disc
F 1:25-2:15. C. Gilbert.
An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature

## ENTOM 490 Insect Toxicology and the

 Molecular Basis of Insecticide Toxicity (also Toxicology 490) Spring. 4 credits. Prerequisites: general chemistry and organic chemistry. S-U grades optional. Undergraduate students by permission of instructor. Offered alternate years. Not offered 1995-96.Lecs, M W F 9:05; lab, day to be arranged, 1:25-4:25. J. G. Scott. The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insecticidal compounds with biotechnology will be discussed.

## ENTOM 494 Special Topics in Entomology

Fall or spring. 4 credits maximum, S-U grades optional.

Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## ENTOM 497 Individual Study in

Entomology
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

## ENTOM 498 Undergraduate Teaching

Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor.
Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory
section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

## [ENTOM 621 Acarology

Fall. 4 credits. Prerequisites: ENTOM 212 and permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W 9:05; lab, M 1:25-4:25.
G. C. Eickwort.

An introduction to the taxonomy, morphology, and bionomics of mites and ticks, with emphasis on taxa of economic importance. A collection is required.]

## [ENTOM 631 Systematics of the Coleoptera

Fall. 4 credits. Prerequisite: ENTOM 331. Offered alternate years. Not offered 1994-95

Lecs, M W 12:20; labs, M W 1:25-4:25.
$S$ field trips. Q. D. Wheeler.
A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.]

## ENTOM 634 Special Topics in

 Systematic EntomologyFall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

## ENTOM 636 Seminar in Systematic

 EntomologyFall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. Staff. Discussion of current topics in systematic entomology. Topics to be announced, including current theoretical issues in insect classification, evolution, and biogeography.

## ENTOM 640 Applied Ecology and Pest Management

Spring. 3 credits. Prerequisites: ENTOM 444 and a course in statistics. Recommended: a course in computer science. S-U grades optional. Offered alternate years. Not offered 1995-96.

Lecs,T R 2:30-3:45. P. M. Davis.
Theory and quantitative methods for characterizing arthropod population dynamics for research and pest management purposes. Course evaluates biological and climatic factors influencing population numbers, development, dispersal, and plant response to arthropod pests. Special topics include development of sampling methodology and simulation modeling.
[ENTOM 662 Insect Behavior Seminar Spring. 2 credits. Prerequisites: permission of instructors and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered 1994-95.

Hours to be arranged. G. C. Eickwort,

## M. J. Tauber.]

## [ENTOM 664 Seminar in Insect-Plant Interactions (also BIOES 664)

Spring. 2 credits. Limited to 15 students. Prerequisites: entomology, ecology, evolution, organic chemistry, and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

One evening a week, to be arranged. P. P. Feeny.

For graduate students and seniors. Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.]
ENTOM 672 Seminar in Aquatic Ecology Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471 or BIOES 462, 464. S-U grades optional. Offered altemate years. Not offered 1995-96.

Hours to be arranged. B. L. Peckarsky. Discussion and analysis of current topics in the ecology of streams, lakes and marine ecosystems, including student-generated synthesis of key papers in the literature.

## [ENTOM 674 Principles of Systematics (also BIOES 674)

Spring. 4 credits. Prerequisite: ENTOM 331 or introductory systematics course in another field of biological sciences. Offered altemate years. Not offered 1994-95.

Lecs-disc-labs, M W 1:25-4:25. Staff.
(Q. D. Wheeler, coordinator).

An introduction to modern theory and methods of systematic biology. Lectures readings, and discussions on theoretical systematics, including species concepts, classification, phylogenetics, and biogeography. Laboratories include various methods of analysis of data (e.g., cladistic hand and computer methods, numerical methods). Part of the grade is based on a final paper.]

## [ENTOM 677 Biological Control

Fall. 3 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, T R 9:05; lab, T 2-4:25. M. J. Tauber. Approach and procedures in biological control of arthropod pests and weeds. Laboratory includes studies with living parasitoids and predators.l

## ENTOM 685 Seminar in Insect Physiology

Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor.

Hours to be arranged. C. Gilbert.

## ENTOM 694 Special Topics in

 EntomologyFall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff.
The deparment teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## ENTOM 707 Individual Study for Graduate Students

Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor. Not for thesis research.

> Staff.

## ENTOM 709 Teaching Entomology

## Credit to be arranged

Staff.
Teaching entomology or for extension training.
ENTOM 800 Master's-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

## ENTOM 900 Doctoral-Level Thesis

 ResearchCredit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

## Jugatae Seminar

Fall and spring.

$$
\text { R } 4-5 .
$$

A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

## FLORICULTURE AND ORNAMENTAL HORTICULTURE

Floriculture and Omamental Horticulture courses are listed under Horticultural Sciences on p. 74.

## Freehand Drawing and Scientific Illustration

Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture.
Courses are described on p. 73.

## Landscape Architecture

The Landscape Architecture Program at Cornell is sponsored by the College of Agriculture and Life Sciences through the Department of Floriculture and Ornamental Horticulture, and the College of Architecture, Art, and Planning. For course descriptions, see Landscape Architecture, p. 78.

## FOOD SCIENCE

R. A. Ledford, chair; T. E. Acree,
D. K. Bandler, D. M. Barbano, C. A. Batt, D. H. Beermann, M. C. Bourne, J. Brady, A. K. Datta, I). C. Graham, R. B. Gravani, T. Henick-Kling, P. F. Hopper, J. H. Hotchkiss, H. T. Lawless, D. D. Miller, S. Mulvaney, J. M. Regenstein, S. S. H. Rizvi, J. W. Sherbon

## FOOD 101 Science and Technology of

 FoodsFall. 1 credit. S-U grades only. Lec and disc, M 12:20. J. Hotchkiss and staff.
This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

## FOOD 102 Contemporary Perspectives in

 Food ScienceSpring. 1 credit. S-U grades only.
F 12:20. Three field trips, 2 on F 1:25-5:00 and 1 on F 7:30 a.m. $-5: 30$ p.m.
R. A. Ledford and J. H. Davidson.

A series of seminars dealing with current technological, regulatory, and international developments in food science. Field trips to four or five commercial food plants will be used to illustrate the application of current technologies.

## FOOD 150 Food Choices and Issues

Spring. 2 credits. S-U grades optional. Lecs, T R 12:20. R. B. Gravani, D. D. Miller, and staff.

This course provides nonmajors with knowledge needed to make appropriate food choices. Emphasis is on principles and concepts necessary for selecting nutritious diets. Topics include: relationships between diet and health, the impact of food science and technology on food choices, the characteristics of the major food commodity groups, and current issues affecting food quality and safety. The course is designed to provide students with practical and useful information about the foods they eat.

## FOOD 200 Introductory Food Science

 Fall. 3 credits.M W F 11:15. J. W. Sherbon.
A comprehensive introduction to food science and technology-its scope, principles, and practices. Topics are constituent properties; methods of preservation; the major food groups, including their handling and processing; and current problems such as chemical additives and world feeding needs. Interrelationships between chemical and physical properties, processing, nutrition, and food quality are stressed. There will be one field trip on a Friday ( 11 a.m. -5 p.m.) in September.

## FOOD 210 Food Analysis

Spring. 3 credits. Prerequisite: CHEM 104 or 208.

Lecs, M W 12:20; lab, F 12:20-3:20.
J. W. Sherbon.

Introduces tests used by food analysts for fats, proteins, carbohydrates, and selected minor nutrients. Emphasis is on understanding and use of good analytical techniques, including gravimetric, volumetric, chromatographic and spectrophotometric methods. A special project for the total analysis of a complex food provides experience in technique selection, work scheduling, and execution.

## FOOD 311 Milk and Frozen Desserts

Fall. 2 credits. Prerequisite: FOOD 322 or permission of instructor. Offered alternate years. Not offered 1995-96.

Lec, R 12:20; lab, R 1:25-4:25.
J. W. Sherbon and D. K. Bandler. Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting it.

## FOOD 321 Food Engineering I

Fall. 3 or 4 credits. Prerequisites: FOOD 200 and PHYS 101.

Lecs, M W F 9:05; lab, T 1:25-4:25 (lab
required for 4 credit option).
S. S. H. Rizvi.

Intended to give food science students an introduction to the engineering aspects of food processes and equipment. Emphasis on the fundamental concepts of momentum, heat, and mass-transport processes.

## FOOD 331 Statistical Quality Control of

 Food ProcessingSpring. 1 credit. Prerequisite: AG EC 310 or equivalent.

Lab, R 1:25-4:25. G. Houghton.
An introduction to the statistical tools used to control quality in food processing operations. Topics covered include control charts and
other process control tools as well as acceptance sampling.

## FOOD 351 Milk Quality

Spring. 1 credit. Prerequisite: AN SCl 350 or equivalent or permission of instructor.

F 12:20. D. K. Bandler.
Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.
FOOD 394 Food Microbiology Lectures
Fall. 2 credits. Prerequisites: BIOMI 290 and 291

M W 12:20. R. A. Ledford.
The major families of microorganisms of importance in foods are studied, with emphasis on the roles of those organisms in food preservation, food fermentations, and public health.

FOOD 395 Food Microbiology Laboratory Fall. 2 credits. Graduate students must have permission of the instructor.

M W 2-4:25. J. M. Brown.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

FOOD 396 Food Safety Assurance
Spring. 2 credits. Prerequisite: FOOD 200 or permission of instructor. Offered altemate years. Not offered 1995-96.

Lec, T R 9:05. R. B. Gravani. This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on Hazard Analysis Critical Control Point (HACCP) programs, total quality management, and the application of current technologies in reducing the incidence of foodborne illness. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

## FOOD 400 Senior Seminar in Food Science and Technology

Fall. 1 credit. Limited to seniors.
Lec, M 4:30. D. K. Bandler.
Students prepare and present a seminar on a topic of current interest in food science and technology.

## [FOOD 401 Concepts of Product

 DevelopmentSpring. 2 credits. Prerequisite: FOOD 200 or equivalent. Offered alternate years. Not offered 1994-95.

M W 9:05-9:55. J. H. Hotchkiss. A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.]

## [FOOD 403 International Food Science

 and DevelopmentSpring, 3 credits. Offered alternate years. Not offered 1994-95.

Lecs, T R 8:30-9:55. D. C. Graham. A critical evaluation of humanity's needs for food, especially in the developing world, and of the international food technologies,
organizations, and policies necessary to meet such needs. Traditional methods and fermentation food processes of basic foods for specific developing countries are described.]
[FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered altemate years. Not offered 1994-95.

Lec, M 12:20-2:15, lab, M 2:30-4:25.
(Note: labs will not meet every week.)
J. M. Regenstein.

Field trips, laboratories, and demonstrations.
Deals with the principles and practices related to managing, reducing, recycling and reclaiming wastes from food plants and other unit operations important to the food industry Some broader areas of waste management impacting the food industry will also be discussed.]

## [FOOD 406 Cheese and Other Fermented

 FoodsFall. 2 credits. Prerequisite: background in microbiology. Offered alternate years. Not offered 1994-95.

Lecs, F 12:20-1:10, lab F 1:25-4:25.
D. K. Bandler.

Principles and practices of fermentation and processing techniques as they apply to cheeses, cultured dairy foods, beers, and related products. Labs will feature unit processes and tastings.]

## FOOD 409 Food Chemistry

Spring. 3 credits. Prerequisite: BIOBM 330 or 331.

Lecs, M W F 9:05. D. D. Miller, J. Brady,
J. M. Regenstein, J. P. VanBuren.

The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

## FOOD 410 Sensory Evaluations of Foods

Fall. 3 credits. Prerequisite: statistics.
Lecs, M W F 10:10. H. T. Lawless.
Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.
FOOD 415 Principles of Food Packaging Fall. 3 credits.

M W F 9:05. J. H. Hotchkiss.
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.
[FOOD 416 Food Packaging Laboratory
Spring. 2 credits. Prerequisite: FOOD 415. Offered alternate years. Not offered 1994-95.

Lec, F 8; lab to be arranged.
J. H. Hotchkiss.

A laboratory course designed to introduce several testing methods used to evaluate adequacy of food packaging. Emphases are on physical testing methods of packaging
materials and the evaluation of total packages. Students will design and build a new food package.]

## [FOOD 417 Sensory Analysis of Dairy

 ProductsSpring. 1 crectit. S-U grades optional. Offered alternate years. Not offered 1994-95. Lec, M 2:30-4:25. H. Lawless. A survey of the traditional quality grading techniques used for sensory evaluation of dairy products, and a comparison of those techniques to alternative sensory evaluation procedures. Students will prepare samples for one or two demonstrations of classical dairy defects such as lipid oxidation or hydrolytic rancidity. Tasting and practice in identifying defects will be given in class. Primary attention will be given to sensory quality factors in fluid milk, cheddar cheese, cottage cheese, and ice cream.]

## FOOD 419 Food Chemistry Laboratory

Spring. 2 credits. Prerequisites: BIOBM 330 or 331 and concurrent registration in FOOD 409.

Lab, W 12:20-4:25. D. D. Miller,
J. M. Brown.

A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

## FOOD 421 Unit Operations in Food Processing II

Fall. 3 credits. Prerequisite: FOOD 322. Lecs, T R 10:10; lab, R 1:25-4:25.
S. S. H. Rizvi, S. Mulvaney.

Principles and practices of thermal processing of foods, as a preservation technique, with emphasis on kinetics of destruction of microorganisms and quality factors. Fundamentals and applications of extrusion and microwave processes. Laboratory experience in retorting of foods, microwave and extrusion processing.

## [FOOD 422 Food Engineering II

Spring. 3 credits. Prerequisite: FOOD 321 or permission of instructor. Offered alternate years. Not offered 1994-95.
Lecs, M W F 10:10. S. S. H. Rizvi,

## S. Mulvaney

Application of transport phenomena to food processing unit operations. Fundamentals of food process design, scale-up, and control.]

## FOOD 430 Understanding Wine

Spring. 3 credits. Prerequisites: Introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 23, 1995) to enroll. S-U grades optional.

T R 2:30-4:25. T. Henick-Kling,
T. E. Acree, and H. T. Lawless.

An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that
produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

## FOOD 447 International Postharvest

 Food SystemsFall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional.

T R 10:10. M. C. Bourne and staff. An interdisciplinary course designed for all undergraduate and graduate students in ALS that describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.
FOOD 450 Fundamentals of Food Law Spring. 2 credits. Offered alternate years. Not offered 1995-96.

Lecs, M 1:25-3:20. J. M. Regenstein. Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system.

## [FOOD 456 Advanced Concepts in

 Sensory EvaluationSpring. 2 credits. Prerequisite: FOOD 410. S-U grades optional. Offered in alternate years. Not offered 1994-95.

Lecs, F 1:25-3:25. H. T. Lawless. Readings and discussions of primary source materials in sensory evaluation, including historical perspectives, psychophysics, perceptual biases, human information processing. Concepts influencing detection of sensory differences, use of rating scales, and characterization of sensory properties will be emphasized.]

## FOOD 494 Special Topics in Food Science

Fall or spring. 4 credits maximum.
S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## FOOD 497 Individual Study in Food

 ScienceFall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Staff.
For the food science student. May include individual tutorial study, a special topic
selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

FOOD 498 Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only.

Staff.
Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor

## FOOD 499 Undergraduate Research in

 Food SclenceFall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Except for students enrolled in the honors program, credit will be limited to 4 credits total

Hours to be arranged. Staff.
Independent study.

## FOOD 600 Seminar

Fall or spring. 1 credit. Required of all food science graduate students. S-U grades only T 4:30.

## [FOOD 601 Food Protein Chemistry

Fall. 3 credits, Limited to graduate students and to seniors with permission of instructor. Prerequisite: FOOD 409 or equivalent. Not offered 1994-95.

Lecs, M W F 9:05. Staff
The chemistry and physical chemistry of proteins are discussed critically with respect to current methods of characterizing and purifying proteins. Food protein functionality is emphasized.]

## FOOD 604 Chemistry of Dairy Products

Fall. 2 credits. Limited to 16 students
Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor Offered alternate years. Not offered 1995-96.

Lecs, F 1:25-3:30. D. M. Barbano.
A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

## FOOD 605 Physical Chemistry of Food

 ComponentsFall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. Offered alternate years. Not offered 1995-96.

Lecs, M W F 10:10. J. W. Brady. This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.
[FOOD 607 Advanced Food Microbiology
Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred). Offered alternate years. Not offered 1994-95.

M W 11:15. C. A. Batt.
There have been great advances in applying the modern tools of molecular biology to the detection of microorganisms and their
metabolites. The primary emphasis of this course will be to review the recent developments in the theory and application of nucleic acid and antibody-based detection systems, especially as they concern food safety. In addition, other approaches, including measurement of impedence, ATT, and endotoxins, will be discussed.]

## FOOD 616 Flavors - Analysis and Applications

Spring. 2 credits. S-U grades optional. Offered alternate years. Not offered 1995-96. Lec, F 1:25; disc, F 2:30. H. Lawless, T. Acree.

An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course will survey taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

## [FOOD 620 Food Carbohydrates (also Nutritional Sciences 620)

Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOBM 330 or equivalent. Offered alternate years. Not offered 1994-95

Lecs, T R 10:10. B. A. Lewis, J. W. Brady. A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage ]

## FOOD 665 Engineering Properties of Foods (also Agricultural and Biological Engineering 665)

Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. Offered alternate years Not offered 1995-96. Lecs, T R 12:20. S. S. H. Rizvi, A. K. Datta, S. J. Mulvaney.

Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

## FOOD 694 Special Topics in Food

 ScienceFall or spring. 4 credits maximum.
S-U grades optional
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## FOOD 698 Graduate Teaching

 ExperienceFall or spring. 1 to 3 credits. S-U grades only Hours to be arranged. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring. There will be assigned
readings and discussion sessions on educational theory and practice throughout the term.

## FOOD 800 Research

Fall or spring. Credit to be arranged. Maximum credit, 10 /semester. Limited to master's and doctoral candidates with permission of the graduate field member concerned. S-U grades only

## Related Courses in Other Departments

Introduction to Computing (ABEN 151)
Food Process Engineering: A Transport
Phenomena Approach (ABEN 466)
Marketing (AG EC 240)
Food Industry Management (AG EC 443)
Meat Science (AN SC 290)
Commercial Meat Processing (AN SC 490)

## FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program within the Department of Floriculture and Ornamental Horticulture. Other courses offered by the department are listed under Horticultural Sciences and Landscape Architecture

## FR DR 109 Nature Drawing

Fall. 3 credits. Limited to 25 students. S-U grades optional. Permission of instructor required.

M W F 10:10-12:05. R. J. Lambert. A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.

FR DR 210 Sketching in Watercolor Summer. 3 credits. S-U grades optional. M T W R F 11:30-12:45. R. J. Lambert. Practice in outdoor sketching, primarily in watercolor, but including pen and ink, pencil, and colored pencil. Studio will develop working sketches into complete paintings Principles of perspective are taught and applied. For any student who wishes to develop skill in handling watercolor. Outside-of-class sketchbook work required.

## FR DR 211 Freehand Drawing and

 IllustrationFall. 2 credits. Prerequisite: LA 141 or equivalent. S-U grades optional.

6 studio hours scheduled in 2- or 3-hour
units berween 9:05 and 12:05 M T W R F. R. J. Lambert

Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered

## FR DR 214 Watercolor

Spring. 2 credits. Prerequisite: LA 141 or equivalent. S-U grades optional.

6 studio hours scheduled in 2- or 3 -hour units between 9:05 and 12:05 M T W R F. R. J. Lambert.

A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

## FR DR 316 Advanced Drawing

Fall or spring. 2 credits. Prerequisite: FR DR 109,211 or permission of instructor, S-U grades optional.

6 hours to be arranged. R. J. Lambert. For students who want to attain proficiency in a particular type of illustration or technique.

## [FR DR 417 Scientific Illustration

Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1994-95.

6 studio hours scheduled between 9:05
and 12:05 M W F. Staff.
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.]

## FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE

See Horticultural Sciences.

## HORTICULTURAL SCIENCES

Horticultural science courses at Cornell are taught by the faculty of the Department of Floriculture and Ornamental Horticulture and the Department of Fruit and Vegetable Science.

## Floriculture and Ornamental Horticulture

G. L. Good, chair; M. I. Adleman,
N. L. Bassuk, C. F. Gortzig, J. Gruttadaurio, N. W. Hummel, Jr., T. H. Johnson, R. E. Kozlowski, D. W. Krall, R. J. Lambert, R. W. Langhans, I. M. Lekstutis, L. J. Mirin, R. G. Mower, K. W. Mudge, J. C. Neal, A. M. Petrovic, D. A. Rakow, D. Tennyson,
R. T. Trancik, P. J. Trowbridge, T. C. Weiler, T. H. Whitlow

## Fruit and Vegetable Science

E. E. Ewing, chair; R. R. Bellinder, L. L. Creasy,
L. A. Ellerbrock, D. E. Halseth, J. R. Hicks,
D. J. Lisk, P. M. Ludford, I. A. Merwin,
P. L. Minotti, M. P. Pritts, J. Sieczka,
W. C. Stiles, L. D. Topoleski, C. B. Watkins, H. C. Wien, D. A. Wilcox, D. W. Wolfe

## Courses by Subject:

General horticulture: 101, 102
Crop production:
Controlled Environment Agriculture: 410,
411, 412, 413
Fruit: 200, 442, 444, 445, 450
Greenhouse: 410, 411, 412, 413
Nursery: 400, 420
Turfgrass: 330
Vegetable: 225, 456, 460
Extension education: 629
Floral design: 205, 210
Horticultural physiology: 400, 405, 450, 455, 456, 460, 462, 615
Independent study, research, and teaching: $470,495,496,497,498,499,500,605,700$, 800,900
Internships: 496
Landscape architecture (professionally
accredited program)
Landscape horticulture: 435, 491, Landscape architecture $142,291,311,312,480,490$

Plant materials: $230,243,300,301,335,430$
Plant propagation: 400
Postharvest physiology: $325,625,630$
Sales and service businesses: 210, 425
Seminars: 495, 600, 602, 630, 636
Special topics: 494
Turfgrass management: 330
Vegetable types and varieties: 220,465

## HORT 101 Introduction to Horticultural

 ScienceFall. 4 credits.
Lecs, M W F 10:10; lab, W 2-4:25.
C. F. Gortzig and I. M. Lekstutis.

An introduction to horticulture in all of its components: floriculture, landscape horticulture, fruit and vegetable science, and related professional and commercial fields. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including one three-day field trip (cost approximately $\$ 100.00$ ), are taken to horticultural firms, institutions, and historic sites.

## HORT 102 General Horticulture

Spring. 4 credits. Each lab limited to 25 students.

Lecs, M W F 10:10; lab, M, T, or W 2-4:25. L. D. Topoleski.

Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

## HORT 200 Introductory Pomology

Fall. 3 credits. S-U grades optional.
Lecs, T R 10:10; lab, T 1:25-4:25.
I. A. Merwin.

A survey of fruit science, emphasizing the natural history, botany, physiology, and production of edible fruits in temperateclimate areas. Topics include varietal breeding and propagation, environmental and sustainability issues, and practical methods of fruit production. Labs and field trips will provide hands-on experience and tours of regional orchards.

## [HORT 205 Floral Design

Fall or spring. 2 credits. Prerequisite: permission of instructor, with preference given to plant science majors, then to students in education, design, and journalism. Charge to purchase instructional plant materials that the student will keep: $\$ 85$. Not offered 1994-95.

T or R 1:25-4:25. Staff.
A study of the established floral design techniques of this country, presenting the principles and the mechanics of the art to prepare the student to design for varying themes and occasions. Other aspects include selection, preparation, and factors affecting keeping-quality of materials.]
[HORT 210 Floral Design: Intermediate Fall. 2 credits. Prerequisite: HORT 205 or permission of instructor; preference given to students planning a career in retail horticulture. Charge to purchase instructional materials that the student will keep: $\$ 90$. Not offered 1994-95.

Studio W 1:25-4:25. Staff.
Advanced study of the art of floral design.]

HORT 220 Vegetable Types and Identification
Fall. 2 credits.
T 2-4:25. L. D. Topoleski.
Acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedlings, nutrient deficiencies, vegetable judging, grading, and grade defects.

## HORT 225 Vegetable Production

Fall. 4 credits. Field trip fee, no more than $\$ 20$.

Lecs, M W F 11:15; lab, W 2-4:25; 1 S field
trip and 3 field trips (Sept), w 11:15-6.
L. A. Ellerbrock.

Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the laboratory are included.

## HORT 230 Woody Plant Materials

Spring. 4 credits. Fee for lecture-laboratory manual: $\$ 35$.

Lecs, T R 9:05; lab, T 2-4:25 and W or F 2-4:25. R. G. Mower. A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

## HORT 243 Taxonomy of Cultivated

 Plants (also BIOPL 243)Fall. 4 credits. Prerequisite: One year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered 1994 and alternate years. Lecs, M W 10:10; labs, M W 2-4:25. M. Luckow.

An introduction to the study of ferns and seed plants with an emphasis on cultivated families and genera. Lectures will cover the principles and methods of systematics, basic rules of nomenclature, and relationships between families, all in the context of cultivated plants. Laboratories will teach sight identification of important plant families and identification of unknowns using analytic keys.

## HORT 300 Garden and Interior Plants I

Fall. 3 credits. Fee for lecture-laboratory manual: \$35.

Lecs, T R 10:10; lab, T 2-4:25.
R. G. Mower.

A study of ornamental plants used in garden and interior situations. The first seven weeks cover primarily herbaceous annuals and perennials, with the laboratory devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and in other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.
HORT 301 Garden and Interior Plants II Spring, 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-
laboratory manual: \$35.
Lecs, M W 11:15; lab, M 2-4:25.
R. G. Mower.

A continuation of Horticultural Sciences 300. The first seven weeks are devoted to a further study of interior plants, with emphasis on
specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and irises, as well as other springblooming bulbs and perennial plants. Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

## HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops

Spring. 3 credits. Offered alternate years. Not offered spring 1996.

Lecs, M W 9:05; lab, T 1:25-4:25.
J. R. Hicks.

A study of changes that occur in horticultural crops between harvest and consumer.
Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticulture crops are covered.

## HORT 330 Turfgrass Management

Fall. 3 credits. Prerequisite: SCAS 260
Offered alternate years. Not offered 1995-96 Lec, M W F 11:15; lab, F 1:25-3:20.
A. M. Petrovic

Study of the scientific principles involved in the management of golf courses, athletic fields, parks, industrial grounds, and sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

## HORT 335 Woody Plant Materials for

 Landscape UseFall. 3 credits. Limited to 30 students. Primarily for landscape architecture majors. Fee for lecture-laboratory manual, \$35.

Lec, M W 9:05; lab, R 1:25-4:25.
R. G. Mower.

A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

## HORT 400 Principles of Plant Propagation

Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology Lecs, T R 9; lab, R 1:25-4:25.
K. W. Mudge

Sexual (seed) propagation and vegetative (asexual) propagation including cuttage, graftage, tissue culture, layering and specialized vegetative reproductive structure Physiological, environmental, and anatomical principles are stressed in lecture and hands-on experience in laboratories. Examples include both temperate as well as tropical horticulture, agronomic, and forestry crops.

## [HORT 405 Physiology of Horticultural Plants

Spring. 4 credits. Prerequisites: BIOPL 242 and $244 ; 341$ or permission of instructor. Not offered 1994-95

Lec, M W F 8; lab to be arranged. Staff A study of the physiology of growth and development of horticultural plants in response to their environment.]

## HORT 410 Principles of Crop Production

 in Controlled EnvironmentsSpring. 3 credits. Prerequisites or corequisite: HORT 411. Two afternoon field trips required.

Lecs, W F 8; lab, R 2-4:25. T. C. Weiler. Study of several controlled-environment agriculture (CEA) crops; including cut, pot and bedding ornamentals; vegetables and fruits briefly covered; emphasis on predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops.

## HORT 411 Principles of Controlled

 Environment Agriculture (CEA)Spring. 3 credits. Prerequisite: permission of instructor. Cost of field trip; $\$ 80+$.

Lecs, T R 10:10-12:05. One 3-day field trip required. T. C. Weiler and staff. Basics and issues related to managing agricultural production in environmentally optimized facilities. Survey of CEA as an agricultural alternative, technology basics, systems and practices; world centers of production, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management, and human resource management.

HORT 412 Case Studies of Controlled Environment Agriculture (CEA)
Spring. 1 credit. Prerequisite or corequisite: HORT 411

Lab three hours per week as scheduled.
R. W. Langhans, J. D. Novak, and
G. B. White.

Analysis of actual CEA enterprises regarding adoption of technology, crop culture, operations management, and/or marketing.

## HORT 413 Computer-Assisted Management in Controlled Environment Agriculture (CEA)

Spring. 1 credit. Prerequisite or corequisite: HORT 411

Lab three hours per week to be scheduled. R. W. Langhans.

Application of computer software to operations management and environmental management of a CEA facility-including specifications for facilities, optimization of resource inputs (e.g., energy, fertilizer), crop programming, efficient space use, labor efficiency (time and motion), and inventory management.

## HORT 420 Principles of Nursery-Crop Production

Fall. 4 credits. Prerequisite: HORT 400 Lecs, M W F 9:05; lab, M 2-4:25; field trips are included. G. L. Good.
Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

## HORT 425 Horticultural Sales and

 Service BusinessesSpring. 4 credits. Prerequisites: AG EC 240 or permission of instructor. Cost of field trip approximately $\$ 100$.

Lecs, M W F 10:10; lab W 1:25-4:25.
C. F. Gortzig and I. M. Lekstutis.

A study of the application of horticultural, marketing, and management principles and practices in the operation of horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing
operations, mail-order businesses, mass markets, interior and outdoor landscapeservice and related firms. Weekly field trips to commercial operations and one 3-4-day field trip to a metropolitan area (cost approximately $\$ 150.00$ ) are taken.

HORT 430 Special Topics in Ornamental Plants
Fall or spring. Credit to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: HORT $230,300,301,335$, or the equivalent, and permission of instructor.

Hours to be arranged. R. G. Mower. Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.
[HORT 435 Landscape Management
Fall. 4 credits. Prerequisites: HORT 230 or 335 , and BIO PL 241 or permission of instructor.

Lec, M W F 12:20-1:10; lab T 1:25-4:25.
D. A. Rakow. Not offered 1994-95. A study of the practices involved in the planting and maintenance of woody ornamental plants in the landscape. The major emphases will be on planting and postplanting techniques, water and fertilization management, pruning, and general tree care The lectures will focus on the physiological bases for essential management principles Labs have a hands-on focus.]

## HORT 442 Small Fruits

Fall. 3 credits. Offered even years Lecs, M W 9; lab, M 1:25-4:25. M. P. Pritts. A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed

## [HORT 444 Viticulture

Fall. 3 credits. Offered odd years. Not offered fall 1994.

Lecs, T R 9:05; lab, R 2-4:25. L. L. Creasy. Grape growing, with emphasis on the viticulture of the Great lakes region, is presented as a series of decisions on varieties, sites, vine management, and vine protection. Those decisions are based on meteorology, soils, vine and grape anatomy and physiology and protection of the vine and grapes from injury.]

## [HORT 445 Orchard Management

Spring. 3 credits. Prerequisite: HORT 200. S-U grades optional. Offered even years. Not offered 1995.

Lecs, T R 10:10; lab, T 1:25-4:25.
I. A. Merwin

The science of fruit tree production in temperate climates, including site evaluation and improvement, fruit variety and rootstock selection, tree propagation, planting, pruning and training systems, the physiology of flowering and fruit development, dormancy and cold hardiness, tree nutrition and water relations, fruit harvesting and storage, and integrated pest management. Emphasis is on agroecological principles and hands-on practice in orchard lab-sessions and field trips.]

## [HORT 450 Soil Management and

 Nutrition of Perennial CropsFall. 3 credits. Offered odd years. Not offered fall 1994.

Lecs, M W 8; lab, M 1:25-4:25.
W. C. Stiles.

Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized.]

## HORT 455 Fertility Management and Nutrition of Vegetable Crops

Fall. 3 credits. Prerequisite: SCAS 260 or equivalent.

Lecs, M W 10:10; lab and disc, M 2-4:25. P. Minotti.

The course deals with both major and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. The course emphasizes hands-on field and greenhouse experiments and small group discussions.

## HORT 460 Plant-Plant Interactions

Spring, weeks 1-6. 2 credits. Prerequisite: any crop production course or permission of instructor

Lecs, M W F 10:10; lab, M 2-4:25; disc,
R or F 1, 2, or 3 ( 1 hr ). H. C. Wien. The manner in which plants interfere or positively interact is examined for the management of cropping systems. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Examples will be taken from both temperate and tropical monoculture and intercropping systems
HORT 462 Vegetable Crop Physiology Spring, weeks 7-14. 3 credits. Prerequisites: HORT 225 and BIOPL 242.

Lecs, M W F 10:10; lab, M 2-4:25; disc,
R or $\mathrm{F} 1,2$, or $3(1 \mathrm{hr})$. H. C. Wien. Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yield. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and weekly small-group discussions.

## HORT 465 Vegetable Varieties and Their

 EvaluationFall, weeks 1-7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only.

Lecs, W F 8; lab, F 1:25-4:25. D. Wilcox and H. C. Wien.
Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

## HORT 470 Special Topics in Pomology

Spring. 3 credits. Open to undergraduates by permission.

Hours to be arranged. Staff.
Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from
one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

## HORT 491 Design and Plant

## Establishment |also Landscape

## Architecture 491)

Fall. 3 credits. Prerequisite: HORT 230 or permission of instructor.

Lecs, T R 12:20; studio, R 1:25-4:25.
N. L. Bassuk and P. J. Trowbridge. This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs and ground covers for a given site, and learn the principles and practices of plant establishment both in the ground and in contained environments. Design followed by specifications and graphic details will be produced to implement these practices. Techniques for tree preservation and land reclamation/ revegetation will be discussed.

## HORT 494 Special Topics in Horticulture

## Fall or spring. 4 credits maximum.

S-U grades optional.
Hours to be arranged. Staff. Two sections
will be offered: Sec 01 Floriculture and
Ornamental Horticulture; Sec 02 Fruit and Vegetable Science.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## HORT 495 Undergraduate Seminar

Fall or spring. May be taken four times for one credit per semester. S-U grades only. Graduate students should enroll in HORT 602 (Fruit and Vegetable Science) or 635 (Floriculture and Ornamental Horticulture). Section 1: Current topics in Floriculture and Ornamental Horticulture.
Fall only. 1 credit.
R 12:20. T. C. Weiler and staff. Each week a staff member will develop a dialogue with students on a topic of current mutual interest. Topics and discussion leaders change by week and semester; topics will encompass planting design, exterior and interior landscape management, turfgrass management, urban horticulture, nursery management, plant materials, stress physiology, weed science, root zone ecology, horticultural sales and service business operation, and controlled environmental agriculture. Brief reading assignments may be distributed for completion by the next class.
Section 2: Current topics in Fruit and
Vegetable Science.
Fall or spring. 1 credit.
Undergraduate participation in fruit and vegetable science departmental weekly seminar series.

## R 4:00. D. Wilcox and I. A. Merwin.

HORT 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in intemship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty
member who will supervise their study and assign their grade.

Staff.
HORT 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall.) Independent study in horticultural sciences under the direction of one or more faculty members.

Hours to be arranged. Staff.

## HORT 498 Undergraduate Teaching

 ExperienceFall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.)

Hours to be arranged. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

## HORT 499 Undergraduate Research

 Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Stuclents must register with an Independent Study form (available in 140 Roberts Hall.)Hours to be arranged. Staff.
Undergraduate research projects in horticultural sciences.

## HORT 500 Master of Professional

 Studies (Agriculture) Project Fall or spring. $1-6$ credits. ( 6 credits maximum toward MPS [Agriculture] degree) S-U grades optional.Hours to be arranged. Graduate faculty A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Masters of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

## HORT 602 Seminar in Fruit and

 Vegetable ScienceFall or spring. 1 credit. Required of graduate students majoring or minoring in pomology or vegetable crops. Limited to graduate students. S-U grades only.

R 4:00. D. Wilcox and I. A. Merwin.

## [HORT 615 Quantitative Methods in

 Horticultural Research Spring. Weeks 1-9. 2 credits. Prerequisite: BTRY 601, BTRY 602 or permission of instructor. S-U grades only. Not offered spring 1995.T R 2:30-4:25. D. W. Wolfe.
Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including-on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.]

HORT 620 Woody Plant Physiology
Spring. 3 credits. BIOPL, BIOBM 331, CHEM 357, or equivalent, or permission of instructor Offered odd years

T R 8:30-9:55. M. P. Pritts and
I. A. Merwin.

A detailed study of physiological processes in woody plants and how these processes influence crop production practices. Topics will include shoot and root growth, phytohormones, dormancy, photoperiodism, photosynthesis, respiration, carbon and nitrogen metabolism, water relations, and fruiting Several faculty members participate in teaching.
[HORT 625 Advanced Postharvest Physiology of Horticultural Crops Spring. 3 credits. Prerequisite: BIOPL 242 and/or HORT 325. Offered alternate years. Not offered spring 1995

Lecs, T R 10:10. Disc session to be arranged. P. M. Ludford
Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions. and a consideration of control.

## HORT 629 Special Topics in Plant Science Extension (also Plant Breeding 629)

Spring, 2 credits. Offered alternate years. F 1:25-4:25. W. D. Pardee.
Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States

## HORT 630 Current Topics in Postharvest

 HorticultureFall or spring. 1 credit. Prerequisite permission of instructor.

Hours to be arranged. G. D. Blanpied. Graduate students and staff report and discuss current topics in postharvest biology and technology of horticultural crops.

## HORT 635 Floriculture and Ornamental Horticulture: Current Topics in Horticultural Research

Fall or spring. 1 credit. Limit: 15 students. Undergraduates should enroll in HORT 495. S-U grades only.

1 hour per week, to be arranged.
T. H. Whitlow and staff.

Weekly graduate seminar to discuss current research in horticulture and related, often overlooked, disciplines. Format is weekly readings, informal presentations, and discussions.

HORT 636 Current Topics in Horticulture
Fall or spring. 1 credit. S-U grades only
1 hour per week, to be arranged.
I. A. Merwin

A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 694 Special Topics in Horticulture Fall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff. Two sections will be offered: Sec 01 Floriculture and
Ornamental Horticulture; Sec 02 Fruit and Vegetable Science
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## HORT 700 Graduate Teaching Experience

Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit to be arranged.
S-U grades only.
Staff
HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit to be arranged. S-U grades only. Staff.

## INTERNATIONAL AGRICULTURE

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits.
F 1:25-3:20. E. Erickson
A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

## INTAG 402 Agriculture in Tropical

 AmericaFall. 2 credits. Prerequisite: Upper class or graduate standing.

F 1:25-3:20. H. D. Thurston and staff. A preparatory course for participation in International Agriculture 602. Physical resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed

## INTAG 403 Traditional Agriculture in Developing Countries

Fall. 1 credit. S-U only.
T 8-8:50. H. D. Thurston, D. Bates,
R. Blake, J. Lassoie, A. Power, T. Scott, and T. Steenhuis.

Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially
subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.
INTAG 414 Cultivation and Improvement of Cereal Crops
Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years Not offered 1995-96.

M W F 11:15. M. E. Smith and staff. An introduction to characteristics, culture, and improvement of important cereal crops of the tropics and subtropics, including agronomic, economic, and social aspects. Emphasizes maize and rice. Lectures feature slides and other illustrative material based on experiences in the tropics and discussion of current issues relating to tropical cereal crops. This is the first of three 1 -credit modules, including INTAG 416 and INTAG 418, each taught for one-third of the semester.

INTAG 416 Cultivation and Improvement of Root, Tuber, and Plantain Crops Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311, or equivalent) and SCAS/BIO G 473. Offered alternate years Not offered 1995-96.

M W F 10:10. H. D. Thurston. An introduction to tropical root, tuber, and plantain crops, their importance, their culture, and their food, feed, and industrial uses. The cultural and socio-economic role of these crops in tropical societies will be considered, as well as the negative and positive aspects of their production and utilization. This is one of three 1 -credit modules, including INTAG 414 and INTAG 418, each taught for one-third of the semester

## INTAG 418 Horticultural Crops in the

 TropicsSpring. 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years Not offered 1995-96.

M W F 11:15. I. Merwin, E. Figueroa, and
C. Wien.

A survey of fruit and vegetable crops of economic and/or dietary importance in the tropics. The natural history of horticultural crops, major regions and methods of production, domestic and export marketing systems, and various technological, ecological, and social factors that affect tropical fruit and vegetable production will be emphasized. This is one of three 1 -credit modules, including INTAG 414 and INTAG 416, each taught for one-chird of the semester.

INTAG 599 International Agriculture and Rural Development Project Paper Fall and spring. 1-6 credits. Limited to M.P.S. candidates in International Agriculture and Rural Development. S-U grades only. Staff.

## INTAG 602 Agriculture in the Developing Nations

Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately $\$ 400$ for lodging, meals, and personal expenses.

T R 2:30-4:25 until midterm only. R. W. Blake.

Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisci-
plinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments clealing with problems in agriculture and livestock production in the context of social and economic conditions.

## INTAG 603 Administration of Agricultural

 and Rural Development (also Government 692)Spring. 4 credits.
M 2:30-5:00. N. T. Uphoff, L. W. Zuidema, and L. Stifel.
An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students trained in agricultural and social sciences who are likely to have administrative responsibilities during their professional

## careers.

## INTAG 650 Special Topics in

## International Agricultural and Rural

 DevelopmentFall or spring. 1-3 credits.
Staff.
A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 685 Training and Development: Theory and Practice \{also Communication 685, Education 685 and Industrial and Labor Relations 658)

Spring and summer. 4 credits. S-U grades optional. Charge for materials $\$ 45$.

Lec, F 9:05-12:05; lab, 1 hour per week, to
be arranged. At Communication Graduate
Center. R. Colle, M. Ewert, D. Deshler.
Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

## INTAG 703 Seminar for Special Projects

 in Agricultural and Rural
## Development

Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the program director. S-U grades only,

M 12:20-2:15. R. W. Blake and
L. W. Zuidema.

The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

## LANDSCAPE ARCHITECTURE

P. J. Trowbridge, Program Coordinator;
M. I. Adleman, S. Baugher, H. W. Gottfried,
P. H. Horrigan, T. H. Johnson, D. W. Krall,
L. J. Mirin, R. T. Trancik, K. A. Wolf

## LA 141 Freehand Drawing

Fall. 3 credits. Limited to 25 students.
$\mathrm{S}-\mathrm{U}$ grades optional.
Studios, T R 2:30-4:25. P. H. Horrigan. Developing ability in freehand observation drawing. Freehand still life, landscape, figure, and perspective drawing will be included.
Weekly sketchbook assignments.

## LA 142 Introduction to Landscape Architecture

Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment and supplies, about \$200.

Lecs, T R 1:25; studio, T R 2:30-4:25.
D. W. Krall.

Fundamentals of landscape design applied to residential and other small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

## LA 201 Design, Composition, and Theory

Fall. 6 credits. Limited to landscape architecture majors. Cost of basic drafting equipment and supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, M W F 1:25; studios, M W F
2:30-4:25. M. I. Adleman.
Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

## LA 202 Design, Composition and Theory

Spring. 6 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, M W F 1:25; studios, M W F
2:30-4:25. T. H. Johnson.
Understanding the role of basic design, design theory, and design languages in landscape architectural projects.

## LA 261 Urban Archaeology (also CRP 261)

## Fall. 3 credits.

Lec, R 1:25-4:25. S. Baugher.
Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

## La 301 Site Design and Detailing

Fall. 6 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, $M$ W F 1:25; studios, M W F
2:30-4:25. P. H. Horrigan.
Course participants will be engaged in the art and science of site-scaled design. This includes gardens, parks, and residential projects, their design and technical solutions.

## LANAR 302 Site Design and Detailing*

 Spring. 6 credits. Prerequisite: LA 301 with a grade of $C$ or better. Cost of supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.Lecs, M W F 1:25; studios, M W F
2:30-4:25. L. Mirin.
*Offered through the College of Architecture, Art, and Planning.

## LA 310 Site Engineering

Fall. 4 credits. Prerequisite: permission of instructor.

Lecs, studios, M W F 9:05-11
M. I. Adleman.

Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

## LA 312 Site Construction

Spring. 4 credits. Prerequisite: permission of instructor.

Lecs, M W 9:05; studios, T R 9:05-11.
P. J. Trowbridge.

The design and use of construction materials, also including specifications, cost estimates, and methods used by landscape architects in project implementation. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a selected project. Students will construct detail material prototypes and models.

## LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360)

## Spring. 3 credits

Lec, R 1:25-4:25. S. Baugher.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

## LA 363/547 American Indians, Planners,

 and Public Policy (also CRP 363/547) Spring. 3 credits.Lec, M 7:00-10:00 p.m. S. Baugher. Decisions made by public agencies and private enterprise too often lead to the floocling, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

## LA 382 The American Landscape

## Spring. 3 credits

Lecs, T R 10:10-12:05. H. Gottfried. An interdisciplinary survey of the cultural history of the American landscape, including perceptions of landscape as expressed in paintings, photographs, and literature. Landscape values, the relation of society to landscape, landscape use, and the history of regional and national landscapes are general topics, all seen within the context of interactions between natural and cultural systems.

## LA 401 Urban Design and Planning

Fall. 6 credits. Prerequisites: LA 302 with a grade of $C$ or better. Cost of supplies, about $\$ 200$; basic expenses for field trip, about $\$ 250$.

Lecs, M W F 1:25; studios, M W F 2:30-
4:25. Required field trip. R. T. Trancik. A sequence of projects introducing students to advanced skills in large-scale spatial design, and historic precedent in an urban context.

## LA 402 Advanced Project Studio

Spring 6 credits. Prerequisite: completion of LA 401 or the study abroad option with a grade of C or better. Cost of supplies and reproductions, about $\$ 200$; basic expenses for field trips, about $\$ 200$.

Lecs, M W F 1:25; studios, M W F
2:30-4:25. M. I. Adleman.
Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture.

## LA 410 Autocad Autotutorial

Fall or spring. $1-5$ credits. Offered to landscape architecture students only. Limited to 15 students.
P. J. Trowbridge, K. M. Flahive. An introductory course in computer-aided design and drafting. Course participants will work on IBM work stations with instructional guidance. Auto-tutorial format for the course will give participants a demonstrated ability to problem-solve and generate increasingly complex graphic displays.

LA 411 Landcadd Autotutorial
Fall or spring. $1-5$ credits. Prerequisite:
LA 410. Limited to 15 students.
P. J. Trowbridge, K. M. Flahive.

An advanced computer-aided course that focuses upon a wide variety of applications including site design and assessment, irrigation, construction detailing, profile and property boundary calculation, planting plans, and many other applications.

## LA 412 Professional Practice

Spring. 1 credit.
Lec. M 11:15. K. Wolf.
Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

## LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481/581)

Fall. 3 credits. Course enrollment is restricted to Landscape Architecture and Planning students, or permission of instructor.

Lecs, M W 10:10; disc, F 10:10.
R. T. Trancik.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

## LA 483 Design Criticism

Spring. 2 credits.
Lecs, W F 11:15. H. Gottfried. A practicum in writing environmental design criticism. Emphasis on impressionistic writing, on analytical descriptions and interpretations or works, and on the role of criticism in environmental design discourse.

## LA 491 Design and Plant Establishment

 (also HORT 491)Fall. 3 credits. Prerequisites: FOH 230 or permission of instructor.

Lecs, T R 12:20; studio, R 1:25-4:25.
N. Bassuk and P. Trowbridge.

This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers for a given site, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by specifications and graphic details will be produced to implement these practices. Techniques for tree preservation and land reclamation/revegetation will also be discussed. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

## LA 494 Special Topics in Landscape Architecture

Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Staff.
Topical subjects in landscape architectural design, theory, history, or technology. Group
study of topics not considered in other courses.

## LA 497 Individual Study in Landscape Architecture

Fall or spring. $1-5$ credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Staff.
Work on special topics by individuals or small groups.

## LA 498 Undergraduate Teaching

Fall or spring. 1-3 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grade optional.

Hours to be arranged. Staff.
Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.
LA 501 Theory, Composition, and Design Fall. 6 credits. Limited to graduate students. Cost of drafting supplies about $\$ 200$. Field trip about $\$ 250$.

## L. Mirin.

Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

LA 502 Design, Composition, and Theory
Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, M W F 1:25; studios, M W F
2:30-4:25. P. H. Horrigan.
The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505 Graphic Communication I
Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.

Lecs, T R 9:05; studios, T R 10:10-12:05.
T. Johnson.

Basic skills in graphic presentation, including pencil-and-ink drawing and drafting techniques applicable to landscape architecture projects. Basic design in freehand drawing, orthographic projection, axonometric projection, and lettering are covered in the course.
LA 506 Graphic Communication II
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor.

Lecs, W F 9:05-12:05. P. H. Horrigan. Graphics studio focusing upon observation and freehand drawing, color theory and technique, perspective, and analytical drawing.

## LA 514 Advanced Site Grading

Spring. 3 credits. Limited to 8 students. Prerequisite: LA 310 or LA 610.

Lec, M 10:10; studios, W F 10:10-12:05. M. I. Adleman.

Grading skills and knowledge applied as a design component of site planning projects.

## LANAR 520 Contemporary Issues in

 Landscape Architecture*Fall. 2 credits
L. Mirin.
*Offered through the College of Architecture, Art, and Planning.

## LANAR 524 History of European

 Landscape Architecture*Spring. 3 credits.
L. Mirin.
*Offered through the College of Architecture, Art, and Planning.

## La 525 History of American Landscape Architecture*

Fall. 3 credits.
L. Mirin.
*Offered through the College of Architecture, Art, and Planning.

## LA 569 Archaeology on Preservation

 Planning and Landscape (also CRP 569)Fall. 3 credits.
Lec, M 7:00-10:00 p.m. S. Baugher. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and landuse decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

## LA 590 Graduate Seminar in Landscape

 ArchitectureFall. 3 credits.
T R 11:15. H. Gottfried.
For graduate students in their last year of study. Seminar in the development of the discipline and research methods, culminating in a thesis proposal.
LA 601 Project Design and Application
Fall. 6 credits. Limited to graduate students. Cost of supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, M W F 1:25; studios, M W F 2:30-
4:25. Required field trip. T. Johnson. Changes in design theory since 1970 in the form of design language archetypes and the application of this knowledge to the transformation of an American place.

## LA 602 Urban Design and Planning (also CRP 555)

Spring. 6 credits, Limited to graduate students. Cost of supplies, about $\$ 200$; expenses for field trip, about $\$ 250$.

Lecs, M T R 1:25; studios, M T R 2:30-4:25.
R. T. Trancik and staff.

Application of urban-design and townplanning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. Urban land-use development and public and private implementation of urban-design plans are examined. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

## LA 610 Site Engineering

Fall. 4 credits. Prerequisite: permission of instructor.

Lec, studios, M W F 9:05-11
M. I. Adleman.

Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

## LA 612 Site Construction

Spring. 4 credits. Prerequisite: permission of instructor.

Lecs, M W 9:05; studios, T R 9:05-11.
P. J. Trowbridge

Construction materials, specifications, cost estimates, and methods used by landscape architects in project implementation. The course includes lectures, studio problems, and development of construction documentation for a selected project. Students will construct prototypes using landscape construction materials.

## LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666) <br> Spring. 3 credits

Lec, R 1:25-4:25. S. Baugher
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

## LA 680 Graduate Seminar in Landscape Architecture

Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.

Staff.
Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

## LA 694 Special Topics in Landscape

 ArchitectureFall or spring. 1-3 credits; may be repeated for credit. S-U grades optional.

Staff.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

## LA 701 Natural Systems and Site Design Studio

Fall. 6 credits. Limited to graduate students. Cost of drafting supplies, about $\$ 200$;
expenses for field trip, about $\$ 250$.
Lecs, M T R 1:25; studios, M T R 2:30-4:25.
Required field trip. P. J. Trowbridge and

## H. Gottfried.

The studio focuses upon site and regionally based project scales that have as a primary concern natural systems. Projects may have nature-like or garden-like design expressions inherent in the studio exercises. Design knowledge of hydrology soils, plant associations, culture, geography, history, and microclimate are necessary to engage studio projects.

## LA 800 Master's Thesis in Landscape Architecture

Fall or spring. 9 credits.
Hours to be arranged. Staff.
Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

## NATURAL RESOURCES

D. J. Decker, chair; R. A. Baer, M. B. Bain,
B. L. Bedford, H. Carter, T. J. Fahey,
T. A. Gavin, J. W. Gillett, J. Jacobson,
J. W. Kelley, B. A. Knuth, M. E. Krasny,
C. C. Krueger, J. P. Lassoie, R. A. Malecki,
B. P. May, R. J. McNeil, A. N. Moen,
R. T. Oglesby, M. E. Richmond, J. Schelhas.
C. L. Schofield, S. Sheaffer, R. Slothower.
C. R. Smith, L. H. Weinstein, B. T. Wilkins,
J. B. Yavitt, W. D. Youngs

NTRES 100 Principles of Conservation
Fall. 3 credits. Limited to students specializing in natural resources or with permission of instructor.

Lecs, M W F 9:05; 1-hr disc to be arranged.
R. T. Oglesby.

The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

## NTRES 101 The Environment

Spring. 2 or 3 credits.
Lec M 7:30-9:30 p.m. Optional 1-hr disc sec to be arranged. R. T. Oglesby.
An overview of Earth's environmental problems. Lectures will be presented by a series of Comell's most distinguished authorities and by visiting experts on issues such as global climate change, loss of biological species, destruction of the stratospheric ozone layer and degradation of our planet's oceans. Students may not receive credit for NTRES 101 and 201 (Environmental Conservation). Students enrolled in NTRES 201 may earn one additional credit by attending lectures and registering for NTRES 494.

## NTRES 107 Introduction to Resource

 ManagementSpring. 4 credits.
Lec, T R 10:10; lab, T or R 2:30-5
B. T. Wilkins.

Management of wildlife, fishery, and forest resources is explored with the assistance of common computer applications. Laboratory sessions enhance writing and analysis of data in DOS and Macintosh Environments. Several hours are required each week outside of class to complete succinct and increasingly complex assignments emphasizing developing results and their implications from data sets.

## NTRES 201 Environmental Conservation

Spring. 3 credits.
Lecs, M W F 12:20; 1-hr disc to be arranged. T. J. Fahey.
As the end of the 20 th century approaches, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will stimulate you to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.
NTRES 210 Introductory Field Biology
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. Cost of field trips, approximately $\$ 10$.

Lec, W 9:05; labs, M W 1:25-4:25 or T R 1:25-4:25. 2 overnight field trips required. T. A. Gavin, C. R. Smith

Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 150 species of vertebrates and 75 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of these events are emphasized

## NTRES 215 Environmental Disruption

 and RegulationSummer, 6 -week session. 3 credits. Open to high school students.

Lecs, M W 6:15-9:30 p.m. M. Heiman. The physical and social context of humanenvironmental interrelations in advanced industrial societies. Interest-group positions and the United States regulatory response on air and water pollution; toxic, nuclear, and solid waste management; and workplace hazards. The conflicts and compatibility of economic growth, social justice, and environmental quality

## NTRES 230 Environment and Society

Summer, 6 -week session. 3 credits.
Lecs, M-F 11:30-12:45. G. M. Berardi and M. Heiman.

Introduction to societal and environmental factors affecting famine and starvation, "overpopulation," deforestation, water degradation and global warming. Topics include sustainable development, gene banks and biotechnology, nutritional and environmental policy, models for conservation, alternative futures. Case studies from the United States and underdeveloped countries Optional field trips.

## NTRES 253 Integrative Resource and

 Environmental Management Spring. 3 credits. Prerequisites: NTRES 210 and BIOES 261.Lecs, M W 10:10-11:00; Lab, W or F
2:30-4:15 or R 12:20-2:15. J. B. Yavitt.
Analysis of complex interactions within biological systems, as well as human influences through management. Topics from both natural resources and environmental sciences will be addressed at organizational levels ranging from single species populations to a global perspective. Laboratory sessions emphasize use of models on microcomputers to develop strategies for dealing with resource and environmental problems.

## NTRES 270 Conservation of Birds

Spring. 2 credits.
Lec, T R 11:15-12:05. C. R. Smith A course for majors and nonmajors, focusing on bird conservation and management at the organism, population, community and landscape levels. Current resource management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change and the economic importance of bird study as an outdoor recreational activity.
NTRES 271 Conservation of Birds Laboratory
Spring. 1 credit. Concurrent enrollment in NTRES 270 required. Limited to NTRES majors.

At least six required Saturday-morning field
trips plus four indoor labs. C. R. Smith. A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other aids to bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songhird populations. Students are required to provide their own binoculars for field use.

## NTRES 301 Forest Ecology

Fall. 3 credits. Prerequisite: Introductory Biology

## M W F 11:15. T. J. Fahey

A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.
NTRES 302 Forest Ecology Laboratory Fall. 1 credit. Cost of weekend trip approximately $\$ 30$. Concurrent enrollment in NTRES 301 required.

M 1:25-4:25. Optional weekend trips.
T. J. Fahey

Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

## NTRES 303 Woodlot Management

Fall. 3 credits. Letter grades only
Lecs, T R 10:10; lab, R 12:20-4:25.
J. W. Kelley.

A practical, field-oriented course emphasizing multiple purpose management of small nonindustrial private forestland in the northeastern United States

## NTRES 304 Wildlife Species Ecology

Spring. 3 credits. Prerequisites: broad background in biology; this course is intended primarily for juniors, seniors, and graduate students.

Lec, M W F 11:15. Two weekly 2-hour
labs to be arranged. A. Moen.
This course focuses on the physiological, behavioral, and population characteristics of wild species, interactions among species, and their relationships with range characteristics and resources. Short field trips are taken weekly. Computer modeling is an integral part of the course.
[NTRES 305 Maple Syrup Production Spring. 2 credits. Limited to 20 students. Prerequisite: permission of instructor required. Letter grades only. Not offered 1994-95

Lecs, T R 10:10; lab, R 12:30-4:30 (during sap season). J. W. Kelley.
Students work in most phases of the Arnot Forest maple operation and learn modern sap collecting, processing, and quality control in producing maple syrup-]

## NTRES 306 Coastal and Oceanic Law

 and PolicySummer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $\$ 850$.

Daily lecs and discs for 1 week. SML faculty.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

## NTRES 308 Natural Resources Management

Fall. 3 credits. Prerequisite: junior standing; introductory ecology or permission of instructor.

M W F 10:10. B. A. Knuth.
Management of natural resources with a focus on fish, wildlife, forest, and water resources. Emphasis is on concepts necessary to formulate and achieve specific management goals and objectives. Topics include an overview of natural resource planning processes and the management cycle; and organismal, environmental, social, and institutional dimensions of management. Focus includes management in the public domain and public-private partnerships. Students will be assigned one case study issue for the term, on which all written and oral assignments will build. Grades are based on both individual and group performance.

## NTRES 400 International Environmental

 IssuesFall. 4 credits. Limited to about 35 students. Prerequisite: junior standing or above.

Lecs, T R 10:10-12:05. R. J. McNeil. International aspects of the preservation and development of environmental and natural resources. Concepts include development, resource ownership, exploitation, compensation, and preservation. Cultural differences in attitudes and behavior toward environment. Management practices under different cultural, economic, and social systems. Will cover current issues such as acid precipitation; management of migratory whales, fish, and waterfowl; Antarctic development; global climate and energy issues; and preservation of tropical rainforests and endangered species. Lecture and discussion, term paper, and examinations. Priority to: seniors, a few graduate students, others providing best mix of backgrounds, others with special needs, natural resources majors.

## NTRES 401 Environmental and Natural Resources Policies

Fall or spring. 3 or 4 credits. Prerequisites junior standing and participation in Comell-inWashington Program.

Lab to be arranged. R. J. McNeil and staff. Concepts and principles fundamental to the environmental policy process. Biological and ecological principles central to decision making in the natural resources arena,

AGRICULTURE AND LIFE SCIENCES - 1994-1995
particularly at the national and international levels. Role of the legal system in the policy process; roles of citizen organizations, lobbyists, bureaucrats, legislators. Case studies, interviews with Washington officials, several short papers, one exam. A fourth credit available requires a more extensive written assignment and an oral presentation.

## NTRES 402 Natural Resources Policy,

 Planning, and PoliticsSpring. 3 credits. Prerequisites: junior standing and permission of instructor.

Lec, January 2-week intersession; one 2-hr. orientation session in Dec. and four 2-hr. seminars in Jan. and Feb. R. J. McNeil and staff.
An introduction to the environmental policy process and its conceptual framework. Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system; roles of citizens, lobbyists, govemment actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington

## NTRES 404 Wildlife Populations Ecology

Fall. 2 credits. Prerequisites: NTRES 304 recommended; programming skills required. Lec M 12:20-1:10; Lab M 1:25-4:25. A. Moen.

This course focuses on population characteristics, structures, and computer modeling of population dynamics. Interactions among species and their relationships with range characteristics and resources are also evaluated within the concept of carrying capacity.

## NTRES 407 Religion, Ethics, and the Environment

Spring. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional.

T R 9:05, 1-hr. disc to be arranged. R. A. Baer.

A study of how religion (mainly Christianity and Judaism), philosophy, and ethics contribute to our understanding and treatment of nature. Terms like religion, value, knowledge, nature, and the public interest are examined in detail. Particular themes include the structure of modern science, the nature of moral claims, character and moral development, and the role of mediating structures in fostering environmentally responsible behavior. Also, animal rights; responsibility to future generations; anthropocentric, biocentric, and theocentric views of human beings and nature.

## NTRES 408 Resource Management and Environmental Law

Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. Lecs, T R 10:10-12. H. Carter, Jr. A senior-level course that introduces the use of legal concepts, doctrines, and remedies in natural resource and environmental management. For a variety of living resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic consider-
ations, and constitutional limitations affect management techniques and objectives.

## NTRES 410 Wildlife Management <br> Concepts and Applications

Spring. 3 credits. Prerequisites: broad background in biology, NTRES 304 (Wildlife Ecology) desirable. This course is open to seniors and graduate students.

M W F 9:05. Weekly labs to be arranged.
A. N. Moen.

In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, and preparation of management information systems. Local field trips are taken.
NTRES 415 Seminar in Agroforestry
Spring. 2 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option.

Lec, F 2:30-4:25. J. P. Lassoie.
An interdisciplinary course intended to introduce students to the general principles and types of agroforestry systems. Agronomic, forestry, socioeconomic, and institutional factors are considered through the use of case studies. Conceptual and methodological approaches to agroforestry research design and program development are stressed. Selected readings, class participation, and a library research paper are required of all enrolled.
NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: one year of college biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$850.

Daily lecs, labs, and fieldwork for 1 weeks.
SML. faculty
An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including freshand salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.
NTRES 418 Wetland Ecology and Management-Lecture
Fall. 3 credits. (Students may not receive credit for NTRES 418 and NTRES 417 Wetland Resources, Shoals Marine Laboratory summer course.)

Lec T R 12:20-1:35. B. L. Bedford. Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered

## NTRES 419 Wetland Ecology and Management-Laboratory

Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required.

Lab F 12:20-4:25. B. L. Bedford. An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the flora, fauna, soils, and hydrology of wetlands within the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification, delineation, and
evaluation. Some exercises will require written reports.

## NTRES 420 Introduction to Geographic

 Information SystemsFall. 4 credits. For juniors, seniors and graduate students. Limited to 40 students. Prerequisite: familiarity with DOS.

Lecs, T R 9:05; Lab, M or T 1:25-4:30.
R. Slothower.

This course will provide a comprehensive overview of the concepts, technology, and use of GIS as well as provide extensive hands-on experience with GIS for diverse applications. The course conveys the geographic and analytical skills necessary to define and resolve spatial information problems.

## NTRES 438 Fishery Management

Spring. 3 credits.
Lecs, T R 8 plus discs. C. C. Krueger.
Offered alternate odd years.
Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

## NTRES 440 Fishery Science

Fall. 3 credits. For juniors and seniors majoring in fishery science; others by permission of instructor. Prerequisites: a year of statistics and calculus. Offered alternate even years.

M W F 12:20. W. D. Youngs. Principles and theories involved in dynamics of fish populations. Methods of obtaining and evaluating statistics of growth, population size, mortality, yield, and production are considered.

## [NTRES 442 Techniques in Fishery Science

Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $\$ 30$. Offered alternate odd years. Not offered 1994-95.

T R 1:25-4:25; 1 or more weekend field
trips. C. C. Krueger.
Emphasis is on methods of collecting data on attributes of fish populations and their habitat. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.]

## NTRES 450 Conservation Biology

Fall. 3 credits. Prerequisite: a reasonable biology background.

Lec, T 10:10-12:05; disc, R 10:10 or 11:15.
T. A. Gavin.

Biological topics important to the maintenance of biological diversity will be emphasized Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of computer models.

NTRES 471 Management of Terrestrial Habitats
Spring. 2 credits. Prerequisites: NTRES 210, 304; statistics recommended; junior standing or above.

Lec/lab, W 1:25-4:25. C. R. Smith.
A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats of variety and temporal spatial scales. Field trips will be taken to areas managed by both public and private land management organizations.
NTRES 493 Research in Policy and Human Studies in Natural Resource Management
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
R. A. Baer, D. J. Decker, J. W. Gillett, B. A. Knuth, R. J. McNeil, B. T. Wilkins.

## NTRES 494 Special Topics in Natural Resources

Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.
NTRES 495 Research in Wildlife Science
Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
T. A. Gavin, R. A. Malecki, A. N. Moen,
M. E. Richmond, C. R. Smith.

NTRES 496 Research in Forestry
Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades; letter grade by permission of instructor.

Hours to be arranged. B. L. Bedford,
T. J. Fahey, M. E. Krasny, J. P. Lassoie,
J. B. Yavilt.

## NTRES 497 Individual Study in Fishery

 SclenceFall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Hours to be arranged. M. B. Bain, C. C. Krueger, R. T. Oglesby,
C. L. Schofield, W. D. Youngs.

## NTRES 498 Teaching in Natural

 ResourcesFall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Staff.

Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

## NTRES 500 Professional Projects-

 M.P.S.Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

> Staff.

NTRES 601 Seminar on Selected Topics in Fishery Biology
Fall or spring. 1 credit. S-U grades optional. Hours to be arranged. Staff.
NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades optional. Hours to be arranged. Staff. Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics vary with staff involved. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

## [NTRES 606 Marine Resource Policies

Spring. 2 credits. Prerequisite: at least one related course such as NTRES 308, 438; or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

W 1:25-3:30. B. T. Wilkins.
A seminar discussing the law and issues concerning current marine policy questions such as coastal zone management, marine fishery management, marine mammal protection, and wetland preservation.]

## NTRES 607 Ecotoxicology (Toxicology

 607)Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate years.

Lecs, M W F 11:15. J. W. Gillett. Lectures, readings, and special guests focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

## NTRES 608 Resource Policy and Administration

Fall. 3 credits. Prerequisite: graduate standing; juniors and seniors with instructor's permission.

TR 2:30-3:45. B. A. Knuth. An examination, through lectures, readings, and discussions, of policy, decision making, and administration relating to natural resource management. Emphasis is on concepts relevant to policy formulation, implementation, and evaluation with specific applications from fisheries, wildlife, forest and water resource management. Topics include environmental policy makers, bureaucracies and organizational effectiveness, professionalism and ethics, resource policy philosophies, and problem-solving and decision aids including public involvement, conflict resolution, benefit/cost analysis, group decision processes, and program evaluation.

## NTRES 611 Seminar in Environmental

 EthicsFall. 3 credits. For graduate students, seniors, and juniors. S-U grades optional. W 1:25-3:50. R. A. Baer.

Moral concerns relative to agriculture and/or the environment. In successive years, the seminar will focus on such topics as
(1) animal rights and animal welfare (topic for fall 1994), (2) natural resources management and the concept of the public interest, (3) doing environmental ethics in a democratic and pluralistic society, and (4) land use ethics.

## NTRES 612 Wildlife Science Seminar

Fall and spring. 1 credit. Prerequisite:
permission of instructor. S-U grades optional. Hours to be arranged. Wildlife science faculty.
Discussion of individual research or current problems in wildlife science.

NTRES 615 Case Studies in Agroforestry Spring. 1 credit. Prerequisites: concurrent enrollment in NTRES 415 is recommended. S-U only.

Hours to be arranged. J. P. Lassoie. Interdisciplinary groups of students examine case study examples of agroforestry practices in developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

## NTRES 616 Forest Science and Management Seminar

Fall/spring. 1 credit. Permission of instructor. Hours to be arranged. Forest Science faculty.
Selected readings and discussions of research and/or current problems in forest science and management.

## NTRES 618 Critical Issues in Conservation and Sustainable Development

Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students.

Lecs, T R 2:30-4:25. J. Schelhas. Establishes a theoretical foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and the development for human needs. Students will work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

## NTRES 619 Field Practicum in Conservation and Sustainable Development

Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January.

Lecs, T R 2:30-4:25 until midterm only. J. Schelhas.

An interdisciplinary study of a conservation and development problem in Costa Rica or the Dominican Republic. The course will use an interdisciplinary research methodology that includes group problem identification, individual or small group research projects, and synthesis of group work to identify key conservation issues and research priorities for a selected site.

## AGRICULTURE AND LIFE SCIENCES - 1994-1995

## NTRES 620 Applications of Geographic

 Information SystemsSpring. 3 credits. Limited to 12 students Prerequisite: NTRES 420 or equivalent; permission of instructor. Possible field trip. Lec, W 9:05, Lab, M 1:25-4:30.
R. Slothower.

Students use GIS techniques to resolve issues involving geographic information within diverse disciplines. Students design, complete, and present the spatial analysis of a problem within their field of study. Lectures, readings, and discussions address application areas and advanced topics in spatial analysis, modeling, and databases. Emphasis will include the integration of natural resource information into spatially oriented projects.

## [NTRES 681 Detection of Genetic

 Variation-LectureFall. 1 credit. Prerequisite: Introductory Genetics course. Offered alternate odd years. Not offered fall 1994

Lec M 9:05. B. P. May.
An introduction to the molecular techniques available to detect genomic variation. The overall emphasis is on providing the student with the theoretical variation basis behind and the practical knowledge of these molecular methods. An optional companion laboratory course (NTRES 682) is also available.]

## [NTRES 682 Detection of Genomic Variation-Laboratory

Fall. 2 credits. Concurrent registration in NTRES 681 and permission of instructor required. Offered alternate odd years. Not offered fall 1994.

Two 3-hr labs per week to be arranged. B. P. May

This laboratory course will present protocols and procedures common to many methods used to detect genomic variation as well as illustrating procedures limited to specific techniques.]

## NTRES 694 Special Topics in Natural

 ResourcesFall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## NTRES 698 Current Topics: Environmental Toxicology (Toxicology 698)

Fall, spring. $1-3$ credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. Time, date to be announced. Staff. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).
NTRES 800 Master's Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only. Staff.

## NTRES 900 Ph.D. Thesis Research

Fall and spring. Credit to be arranged. Limited to graduate students working on Ph.D. thesis research. S-U grades only. Staff

## Related Courses in Other Departments

See department advisers and curriculum materials for information about other related courses.
Environmental Policy (ALS 661, BIOES 661, and B\&SOC 461)
Resource Economics (AG EC 100, 252, 332, $452,631,651,652,750$ )
Functional Ecology: How Animals Work (BIOES 272)
Function and Comparative Morphology of Vertebrates (BIOES 274)
Limnology: Ecology of Lakes (BIOES 457)
Mammalogy (BIOES 471)
Ornithology (BIOES 475)
Biology of Fishes (BIOES 476)
Insect Biology (ENTOM 212)
Public Administration (CRP 643)
Policy Analysis (CRP 720)
Soil Science (SCAS 260, 361)
International Development (CRP 777, GOVT 648)

Environmental Planning Law (Law 660, CRP 653, 656)
Political Economy and Political Theory (CRP 719, GOVT 428)
Philosophy of Science (PHIL 381)

## PLANT BREEDING

E. D. Earle, chair; D. W. Altman,
W. R. Coffman, M. M. Kyle, S. R. McCouch,
M. A. Mutschler, W. D. Pardee, R. L. Plaisted,
K. V. Raman, N. N. Roy, M. E. Smith,
M. E. Sorrells, J. C. Steffens, S. D. Tanksley,
D. R. Viands, K. N. Watanabe, R. W. Zobel

Emeritus Professors: R. E. Anderson,
H. L. Everett, C. C. Lowe, H. M. Munger, and D. 11. Wallace

Biometry courses are listed under "Biometry and Statistics.

## PL BR 201 Introduction to Plant

 BreedingSpring. 2 credits. Prerequisite: one year of introductory biology.

Lecs, T R 11:15. Staff.
This course describes how plant breeders use genetics to alter crop plants. Emphasis is on activities and accomplishments with important impacts on society. Topics to be discussed include the Green Revolution, hybrid crops, sustainable agriculture, biodiversity, pestresistant lines, prospects for tastier winter tomatoes, and gene transfer techniques. Class periods include hands-on exercises and a field trip.

## PL BR 225 Plant Genetics

Spring. 4 credits. Prerequisite: one year of introductory biology or permission of instructor. Limited to 50 students. Will be offered 1995-96.

Lecs, M W F 9:05; lab, T or W 1:25; lab section assignments at first lecture. Labs start first week. M. A. Mutschler.
An overview of genetic principles as related to the plant sciences. Topics covered include mitosis and meiosis, gamete production, Mendelian inheritance, linkage and mapping, gene interaction, DNA as genetic material, genetic fine structure and gene regulation, gene recombination, extranuclear inheritance, environmental effect on phenotypic expression, gene mutation and chromosomal aberrations, variation in chromosome numbers or structure, tissue culture, and genetic
engineering of higher plants. Students conduct an independent inheritance project with Brassica campestris. The course may not be used to fulfill the genetics requirement for students in the Division of Biological Sciences.
PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor

Lecs, T R 10:10. E. D. Earle
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed. Five written assignments and a term paper are required.
PL BR 402 Plant Tissue Culture Laboratory
Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) and written permission of instructor.

Alternate weeks. W 1:25-4:25 plus 1 hr .
to be arranged. E. D. Earle.
Laboratory exercises complementing Plant Breeding 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue and cell cultures will be covered. Experiments will use a broad range of plant materials.

## PL BR 446 Plant Cytogenetics

## Laboratory

Spring. 2 credits. Prerequisites: BIOGD 281 and/or PL BR 225

Lab, M 1:25-4:30. K. N. Watanabe.
This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis will be on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Specific topics will be covered by invited lecturers.

## PL BR 494 Special Topics in Plant Breeding

Fall or spring. 4 credits maximum. S-U grades optional.

Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## PL BR 496 Internship in Plant Breeding

 Fall or spring. Credits variable, may be repeated to a maximum of 6 . Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only.
## Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

## PL BR 497 Individual Study in Plant Breeding

Fall or spring. Credits variable, may be repeated to a maximum of 6 . S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

PL BR 498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6 . S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall).

Staff.
Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research Fall or spring. Credits variable, may be repeated to a maximum of 6 . S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Undergraduate research projects in plant breeding.

## PL BR 603 Methods of Plant Breeding

Fall. 3 credits. Prerequisites: BIOGD 281 or PL BR 225 or equivalent and an introductory course in crop production.

M W F 9:05. M. E. Smith.
A comprehensive examination of plant breeding methods, including inbreeding and population improvement methods. Operational details and practical limitations for each method will be considered, as will suitability for major breeding objectives (agronomic characterstics, quality, and biotic and abiotic stress tolerance). The goal is to familiarize students with tools available to plant breeders, criteria for choosing among them, and options for creatively modifying them for specific situations.

## PL BR 604 Methods of Plant Breeding Laboratory

Fall. 2 credits. Prerequisite: PL BR 603 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

## PL BR 606 Advanced Plant Genetics

Spring. 3 credits. S-U grades optional.
Prerequisites: BIOGD 281, PL BR 225, or equivalent.

Lecs, T R 10:10-11:25. M. M. Kyle. This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

## PL BR 608 Biochemical Approaches in Plant Breeding

Fall. 3 credits. Prerequisite: BIOBM 330, 331, or permission of instructor. Lecs, M W 11:15; lab, W 7:30-10:30 p.m. J. C. Steffens.

A review of biochemical, spectroscopic, and immunological techniques used in the analysis, selection, and generation of crop plants. Examples from current literature and possible applications of new technologies will be discussed. Laboratory will emphasize biochemical techniques used in plant breeding programs. Students should expect to spend more hours in laboratory than suggested by the formal meeting times.

## PL BR 622 Seminar

Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students and visitors.

PL BR 629 Special Topics in Plant Science Extension
Spring. 2 credits.
F 1:25-4:25. W. D. Pardee.
Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

## PL BR 650 Special Problems in Research and Teaching

Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff

## PL BR 653.2 Plant Biotechnology (also BIOPL 653.2 and Plant Pathology 663)

Fall. 1 credit. S-U grades optional. Prerequisite: BIOPL 653.1 or permission of instructor. Lecs, M W F 10:10 ( 12 lecs)
Aug. 31-Sept. 26. M. Zaitlin, E. D. Earle Applications of molecular biology and tissue culture to plant biotechnology are studied. Topics covered include gene introduction and tissue culture technologies, as well as use of cultured plant materials and transgenic plants to obtain resistance to insects, plant diseases, and herbicides and to improve nutritional and food processing qualities. Regulatory and social issues relating to plant biotechnology are discussed.
PL BR 653.3 Plant Genome Organization Fall. 1 credit. Prerequisite: BIOPL 653.1.

Lecs, M W F 10:10-11 (12 lecs),
Oct. 3-Oct. 31, S. D. Tanksley. Module 3 in Plant Molecular Biology series. Molecular structure and evolution of plant nuclear genomes are explored. Topics covered include mechanisms for packaging DNA into chromosomes, molecular structure of telomeres and centromeres, DNA replication and methylation, and molecular biology of plant transposons. Methods for genetic and physical mapping of plant genomes are discussed as well as applications of mapping tools for gene isolation and plant breeding.

## PL BR 694 Special Topics in Plant Breeding

Fall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## PL BR 716 Perspectives in Plant

 Breeding StrategiesSpring. 3 credits. S-U grades optional. Prerequisite: PL BR 603. Offered alternate years. Not offered 1995-96.

T 1:25-2:15, R 12:20-2:15. M. E. Sorrells Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

## [PL BR 717 Quantitative Genetics in Plant Breeding

Spring. 3 credits. S-U grades only. Prerequisites: PL BR 603 and BTRY 601. Offered 1995-96.

T R 8:30-9:55. D. R. Viands.
Discussion of quantitative genetics to help make decisions for more efficient plant breeding. Specific topics include components of variance (estimated from mating designs), gene pool development, linkage, heritability, phenotypic and genotypic correlation coefficients, and theoretical gain from selection. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.]
[PL BR 718 Breeding for Pest Resistance Spring. 3 credits. Prerequisites: BIOGI) 281 or PL BR 225, and PL BR 603 required. An introductory course in Plant Pathology and/or Entomology also highly recommended. Not offered 1994-95.

Lec, T R 10:10-11:30. M. A. Mutschler. A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance stability of genetic resistance mechanisms, and the use of biochemical/ physiological/molecular tools in breeding for pest resistance.]

## PL BR 800 Thesis Research, Master of

 ScienceFall or spring. Credit to be arranged. S-U grade only. Staff.

## PL BR 900 Thesis Research, Doctor of Philosophy

Fall or spring. Credit to be arranged $\mathrm{S}-\mathrm{U}$ grade only.

Staff.

## PLANT PATHOLOGY

W. E. Fry, chair; J. R. Aist, P. A. Arneson, S. V. Beer, G. C. Bergstrom, B. B. Brodie, A. R. Collmer, S. M. Gray, R. K. Horst, G. W. Hudler, H. W. Israel, R. P. Korf, J. W. Lorbeer, R. Loria, M. T. McGrath, M. G. Milgroom, E. B. Nelson, P. F. Palukaitis, W. A. Sinclair, S. A. Slack, H. D. Thurston,
O. C. Yoder, M. Zaitlin, T. A. Zitter
[PL PA 101 Freshman Writing Seminar: Pests, Pesticides, People, and Politics
Fall. 3 credits. Limited to 17 students. Not offered 1994-95.

Lecs, M W F 8:00. P. A. Arneson.
This seminar will examine the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachael Carson's classic Silent Spring, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.]

## PL PA 201 Magical Mushrooms, Mischievous Molds

Spring. 2 credits. S-U optional. Lecs, T R 11:15. G. W. Hudler. A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals will be emphasized.

## PL PA 301 Introductory Plant Pathology

Fall. 4 credits. Prerequisites: BIO G 101-102 and 103-104, or 105-106 or 109-110, and BIOPL 241 or equivalent. Lecs, T R 11:15; lab, T W 1:25-4:25 and one period weekly, scheduled at the convenience of the student. W. A. Sinclair.
An introduction to the theory and practice of plant pathology with emphasis in lectures on principles that govern interactions of plants and pathogens and in laboratories on diagnostic criteria, life cycles of pathogens, and epidemiological phenomena and control. Specific aspects considered in detail include fungi, bacteria, nematodes, vinuses, and mycoplasmas as plant pathogens; attack and resistance mechanisms; environmental influences; disease forecasting and loss assessment; development of resistant plants; and chemical and biological control.

## PL PA 309 Introductory Mycology

Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in PL PA 319 is recommended.

Lecs, T R 9:05-9:55; labs, R 1:25-4:25. J. R. Aist.

An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

## PL PA 319 Field Mycology

Fall. 1 credit. Prerequisite: permission of instructor.
Lab, W 1:25-4:25 and 7:30-9:30 p.m. R. P. Korf.

Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to identification and study of collections under the microscope. Emphasis on ecology, biology, and means of identifica-
tion. There are no lectures; grades will be determined on basis of laboratory final.

## PL PA 402 Plant Disease Control

Spring. 3 credits. Prerequisite: PL PA 301 or equivalent.

Lecs, T R 11:15; lab and rec, T or W
1:25-4:25. P. A. Arneson.
This course complements Plant Pathology 301 with an in-depth presentation of the principles and practices of plant disease control that builds on students' knowledge of diseases and their causal agents. General principles and concepts, illustrated by specific examples, are presented. Students write a term paper applying those principles to a specific diseasecontrol problem. The laboratories provide practical experience in diagnosis and diseasecontrol techniques.
[PL PA 411 Plant Disease Diagnosis Fall. 3 credits. For senior undergraduates specializing in plant pathology or pest management and for graduate students with a major or minor in plant pathology or plant protection. Limited to 20 students. Prerequisites: PLPA 301 or equivalent and permission of instructor. Not offered 1994-95.

Lec, M 11:15; lab, M W 1:25-4:25. G. W. Hudler.

A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.]

## PL PA 443 Pathology of Trees and Shrubs

Fall. 3 credits. Prerequisites: PL PA 301 or equivalents.

Lecs, M W 11:15; labs, F 1:25-4:25. Evening prelims. G. W. Hudler. For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.
PL PA 444 Integrated Pest Management (also Entomology 444)
Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 301 or their equivalents or permission of instructor. Lecs, M W F 9:05; lab, M 1:25-4:25. P. A. Arneson.

Lectures integrate the principles of pest control, ecology, and economics in the management of pest crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

## PL PA 494 Special Topics in Plant Pathology

Fall or spring. 4 credits maximum. S-U grades optional.

Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offfered more than twice under this number.

## PL PA 497 Independent Study

Fall or spring. $1-5$ credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Hours to be arranged. Staff.

An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

## PL PA 498 Teaching Experience

Fall or spring. $1-5$ credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Hours to be arranged. Staff,
Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

## PL PA 499 Undergraduate Research

Fall or spring. $3-5$ credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Hours to be arranged. Staff. An opportunity for research experience under the direction of a faculty member.

## PL PA 642-661 Special Topics Series

Unless otherwise indicated, the following description applies to courses 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only.

Hours to be arranged.
Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

## PL PA 642 Plant Disease Epidemiology

## Fall.

T 12:20. M. G. Milgroom.
PL PA 644 Ecology of Soil-Borne Pathogens
Fall. Meets with PL PA 646. E. B. Nelson.

## PL PA 645 Plant Virology <br> Fall. <br> F 12:20. S. M. Gray

## PL PA 646 Plant Nematology

Spring. Meets with PL PA 644. B. B. Brodie

PL PA 647 Bacterial Plant Diseases
Fall and spring.
M 9:05. S. V. Beer.
Emphasizes current research in phytobacteriology undertaken in laboratories at Cornell.
[PL PA 648 Molecular Plant Pathology
Fall. Not offered fall 1994.
R 12:20. A. R. Collmer and O. C. Yoder.]
PL PA 649 Mycology Conferences
Fall. 1 credit.
R. P. Korf

PL PA 650 Diseases of Vegetable Crops Fall.

W, hours to be arranged. J. W. Lorbeer, T. A. Zitter.

## PL PA 652 Field Crop Pathology <br> Spring. <br> W 8. G. C. Bergstrom.

PL PA 654 Diseases of Florist Crops Spring.

F 12:20. R. K. Horst.
PL PA 655 Plant Diseases in Tropical Agriculture
Spring
T 12:20. H. D. Thurston.

PL PA 661 Diagnostic Lab Experience
Summer and fall. 2 credits. S-U grades only. Hours to be arranged. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students will work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Students may choose to work on a wide array of plant material or to concentrate on a particular commodity. Priority will be given to graduate students in plant pathology and plant protection.

## PL PA 662 Molecular Plant-Pathogen

 Interactions (also BIOMI 652.1)Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOMI 653.1. Lecs, M W F 10:10 (12 lecs) Jan. 25-Feb. 20. P. F. Palukaitis, O. C. Yoder. An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (viruses, bacteria, and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

## PL PA 663 Plant Biotechnology (also BIOMI 653.2 and PL BR 653.2]

Fall. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331 , and BIOMI 653.1 Lecs, M W F 10:10 (12 lecs) Aug. 31Sept. 26. M. Zaitlin, E. D. Earle. Applications of molecular biology and tissue culture to plant biotechnology are studied. Topics covered include gene introduction and tissue culture technologies, use of somaclonal variation, use of cultured plant materials and transgenic plants to obtain resistance to insects, plant diseases, and herbicides and improve nutritional and food processing qualities. Regulatory and social issues related to plant biotechnology are discussed.

PL PA 681 Plant Pathology Seminar Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:20-1:20. Staff.

## PL PA 694 Special Topics in Plant

 PathologyFall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## PL PA 701 Concepts of Plant Pathology:

 Organismal AspectsSpring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 301 or equivalent and permission of instructor. Lecs, T R 9:05; lab-disc, R 2-4:25. A. R. Collmer.

Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems will be considered. Historical perspectives and recent research will be reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 702 Concepts of Plant Pathology: Population Aspects
Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 301 and permission of instructor.

Lec, T R 10:10; lab, T 2-4:25.
M. G. Milgroom.

Theory and concepts in epidemiology and population biology of plant diseases. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, disease in natural communities, and applications of theory and modeling to disease management. The laboratory period will be for discussions and exercises that illustrate concepts introduced in lectures.

## PL PA 705 Phytovirology

Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 301 or equivalent.

Lec, T R 10:10. M. Zaitlin.
This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

## PL PA 706 Phytonematology

Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 301 or equivalent or permission of instructor.

Lec, R 11:15; lab, R 1:25-4:25. Staff. Deals with morphology, anatomy, biology, physiology, ecology, detection and identification of plant pathogenic nematodes, evaluation of population data, interactions between nematodes and other plant pathogens, and methods of assessment of pathogenicity and plant damage.

## PL PA 707 Phytobacteriology

Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; Introductory Plant Pathology. Offered alternate years.

$$
\begin{aligned}
& \text { Lec, W 9:05; lab, W 1:25-4:25. } \\
& \text { S. V. Beer. }
\end{aligned}
$$

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens, and recent developments in
phytobacteriology. The current state of knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis will be reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

## PL PA 709 Phytomycology

Spring. 2 credits. For graduate students with a major or minor in mycology or plant pathology; others by permission. Prerequisites: PL PA 301 and 309 or equivalents, and permission of instructor.

Lec, F 1:25-2:30; lab, 2:30-4:30.
J. W. Lorbeer.

Provides basic information on the biology of plant pathogenic fungi with selected emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

PL PA 715 Phytovirology Laboratory
Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only

Two 3-hour lab sessions, R, F.
P. Palukaitis.
[PL PA 735 Advanced Plant Virology
Spring. 3 credits. Prerequisite: permission of instructors. Not offered 1994-95.

3 lecs, hours to be arranged.
P. Palukaitis, M. Zaitlin.

Topics in plant virology, with an emphasis placed on student discussion of current literature. Topics included are viral infection process, viral and viroid replication, viral recombination, viral movement, viral genes and their products, cross protection, detection of viruses, molecular approaches to resistance and the use of viruses as vectors for introducing genetic material into plants.]
PL PA 738 Genetics and Development of Filamentous Fungi
Fall. 2 credits. Prerequisite: BIOGI) 281 or equivalent.

Hours to be arranged. O. C. Yoder and B. G. Turgeon.

Classical and molecular approaches to the study of fungal genetics are discussed. Recently developed molecular technology is highlighted, with emphasis on transformation systems, gene disruption and replacement, gene over-expression, stability of transforming DNA, native transposons and plasmids, karyotyping by chromosome separation, and secretion of heterologous proteins. Application of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity), the mitotic and meiotic cell cycles, and conidium formation is described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of recently developed plant pathogenic fungi such as Cochliobolus beterostrophus and Magnaporthe grisea and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

## PL PA 739 Advanced Mycology

Fall. 4 credits. Prerequisites: PL PA 309 or equivalent, a course in genetics, and permission of instructor. Offered alternate years. Not offered 1995-96.

Lec, M 10:10; labs, M W 1:25-4:25, and an additional 3-hr. period to be arranged. R. P. Korf.
A detailed study of the taxonomy, nomenclature, and biology of four major groups of fungi (rusts, smuts, peronosporales, and fungi imperfecti).
[PL PA 756 Advanced Plant Nematology Spring. 3 credits. For graduate students with a major in plant pathology and special interest in Nematology. Prerequisite: permission of instructor. Offered alternate years. Not offered 1994-95.

Hours to be arranged. Staff.]

## PL PA 788 Research in Molecular Plant

 PathologyFall and spring. 2, 4 , or 6 credits. Prerequisite: permission of instructor. S-U grades only.

Lab, hours to be arranged. S. V. Beer and staff.
Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and

## AGRICULTURE AND LIFE SCIENCES - 1994-1995

plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

## PL PA 797 Special Topics

Fall or spring. $1-5$ credits. S-U grades optional.

Hours to be arranged. Staff. An opportunity for independent study of a special topic.

## PL PA 799 Graduate Research

Fall or spring. $1-5$ credits. S-U grades optional.

Hours to be arranged. Staff.

## POMOLOGY (FRUIT SCIENCE)

See Horticultural Sciences.

## RURAL SOCIOLOGY

D. L. Brown, chair; P. R. Ebers,
E. C. Erickson, S. Feldman, J. D. Francis,
C. G. Geisler, N. Glasgow, D. T. Gurak,
M. M. Kritz, T. A. Hirschl. T. A. Lyson,
P. D. McMichael, M. J. Pfeffer, J. M. Stycos,

R SOC 100 American Indian Studies: An introduction
Fall. 3 credits. S-U grades optional. Lec, W 7-10 p.m. R. W. Venables.
This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations
R SOC 101 Introduction to Sociology
Fall or spring. 3 credits.
Fall: Lecs, T R 10:10; disc and sec, M 10:10, 11:15, 12:20, 1:25, 2:30; T 9:05, 11:15; W 11:15, 12:20; R 11:15, 12:20; F 10:10. E. Erickson and staff. Spring: Lecs, T R 10:10; disc and sec: M 10:10, 11:15, 12:20, 1:25, 2:30; T 9:05, 11:15; W 11:15, 12:20; R 11:15, 12:20; F 10:10. E. C. Erickson and staff. A survey of major concepts and theories in sociology and an examination of major social forces and institutions shaping modern societies. The major topics include culture and socialization, social stratification and social class, age and gender inequality, economy and society, politics and the state, urbanization and demographic change, social change and international development, the rural-urban transition, and war and peace.

R SOC 175 Issues in Contemporary American Indian Societies
Spring. 3 credits. S-U grades optional. W 7-10 p.m. R. W. Venables. Early American Indian history and the postcontact period will be reviewed with an emphasis given to developments since 1789. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations.

## R SOC 200 Social Problems

Fall. 3 credits. S-U grades optional. Lecs, M W F 9:05. T. A. Hirschl.
This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyses of a variety of social problems, and these may vary semester to semester.
Examples of social problems are
homelessness, teenage pregnancy,
deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured, and students will be given an opportunity to test theories with data analysis.

## R SOC 201 Population Dynamics

Spring. 3 credits. S-U grades optional. ALS students must register for this course as R SOC 201.

TR 2:30-3:45. J. M. Stycos.
An introduction to population studies, which includes the determinants and consequences of population change. The primary focus is on the influences of demographic dynamics on society and the economy, with emphasis on marriage, family formation, mortality, crime and deviance, migration, and marketing behavior.

## R SOC 205 International Development

 Spring. 3 credits.M W F 10:10. P. D. McMichael. New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include new social diets, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the current debt crisis, and new technologies.

## R SOC 206 Gender and Society

 Spring. 3 credits.Lec M W 11:15; Sec W 7:30-8:20 p.m.;
R 12:20-1:10; 1:25-2:15; 2:30-3:20.
N. L. Glasgow.

Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and degree that biological, psychoanalytic, social psychological, and sociological perspectives help to understand the differences. Objectives will be met through lectures, readings, films, participant observations, and personal experiences. Crosscultural comparisons of gender role behavior will be made.

## R SOC 208 Technology and Society

 Fall. 3 credits.M W F 10:10. C. C. Geisler.
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical dehates regarding technology and society. Herein, students compare high technologies and appropriate technologies,
identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.
R SOC 213 Social Indicators, Data Management, and Analysis
Fall. 3 credits
Lecs, T R 2:30-3:45. P. R. Eberts. A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and key-informant and other low-cost techniques, will be examined, using personal computers.

## R SOC 301 Theories of Society

Fall. 3 credits. Prerequisites: rural sociology or sociology course. S-U grades optional. M W F 11:15. F. W. Young.
An introduction to the "classical" sociological theorists for juniors, seniors, and beginning graduate students. Emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Marx, Durkheim, Weber) and contemporary counterparts. The relevance of these theories of society to current events and social problems will be stressed.

## R SOC 318 Ethnohistory of the Northern

 IroquoisFall. 3 credits. S-U grades optional. Lec, T 1:25-4:25. R. W. Venables.
The development of Iroquois
(Houdenosaunee) history and culture is traced to the present day
R SOC 324 Environment and Society Fall. 3 credits.

> M W F 1:25. M. J. Pfeffer.

The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought; preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion.

## R SOC 331 Applied Demography in

 Business and Government Spring. 3 credits. S-U with permission of instructor. Prerequisite: R SOC 213 or a statistics course.M W F 1:25. W. A. Brown.
An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. The course deals with the use of demographic analysis in politics and public administration, health services, recreation, marketing, housing, transportation, human resources, city and regional planning, and social services.

## R SOC 336 Rural Areas in Metropolitan

 SocietyFall. 3 credits. S-U grades optional. Prerequisite: a social science course. Offered alternate years.

T' R 12:20-1:35. D). L. Brown.
This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on rural adaptation to major trends including increased societal differentiation and complexity; increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered.

## [R SOC 367 American Indian Tribal

 GovernmentsFall. 3 credits. Not offered 1994-95 W 7:30-9:55 p.m. Staff.]

R SOC 370 Comparative Issues in Social Stratification
Fall. 3 credits. Prerequisite: an introductory social science course

T R 1:25-2:40. T. A. Lyson or S. Feldman.

This course reviews both classicial and contemporary issues in the social stratification literature. Particular attention is given to two main themes: the changing configuration of the labor market and the contemporary debates on the "under class," the "middle class," and the "new class." Throughout the course attention is drawn to the importance of conceptual clarity, questions of measurement, and the changing salience of popular topics such as new social movements, the role of ideology and consciousness, and the role of gender, race, and ethnicity in assessments of inequality and hierarchy.

## R SOC 380 Independent Honors Research in Social Science

 Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Staff.Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative, M. Pfeffer.

## R SOC 408 Human Fertility in Developing

 NationsSpring. 3 credits. S-U grades optional.
Offered alternate years
W 7:30-10:30 p.m. J. M. Stycos
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

## [R SOC 418 Population Policy

Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Offered alternate years. Not offered 1994-95.

T R 10:10-11:25. J. M. Stycos.]

## [R SOC 425 Gender Relations, Gender

 Ideologies, and Social Change Fall. 3 credits. Offered alternate years. Not offered 1994-95.R 1:55-4:25. S. Feldman.\}

## [R SOC 430 Migration and Population

 RedistributionFall. 3 credits. Offered alternate years. Not offered 1994-95

T R 8-9:55. D. L. Brown.]

## R SOC 431 Social Demography of

 MinoritiesSpring. 3 credits. S-U option
T R 12:20-1:35. D. T. Gurak.
Ethnic conflict and accomodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations

## R SOC 437 Aging: Issues and Social

 Policy in the 1990sFall. 3 credits. Prerequisite: R SOC 101 or its equivalent

T R 10:50-12:05. N. L. Glasgow
An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements by the elderly

## R SOC 438 Social Demography

Fall. 3 credits
T R 10:50-12:05. M. M. Kritz or D. T. Gurak

This course surveys the methods, theories, and problems of population studies. Attention is directed to the social, economic, and cultural determinants and consequences of population growth, distribution, and change The core areas of demography, fertility, mortality, and migration are studied. Comparisons are made between developed and developing areas and between Africa, Asia, and Latin America.

## [R SOC 439 Social and Demographic

 Changes in AsiaSpring. 3 credits. Prerequisite: R SOC 201 Offered alternate years. Not offered 1994-95 W 7:30 p.m. Staff.]

## R SOC 440 The Social Impact of

 Resource DevelopmentSpring. 3 credits. S-U grades optional. Offered alternate years.

W 7:00-10 p.m. C. G. Geisler. Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.

## R SOC 442 American Indian

Philosophies: Selected Topics
Spring. 3 credits. S-U grades optional Prerequisite: Permission of instructor.

Lec. T 1:25-4:25. R. W. Venables This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

## IR SOC 475 Global Patterns of

 International MigrationFall. 3 credits. Prerequisite: R SOC 101
Offered alternate years. Not offered 1994-95 M W F 9:05-9:55. M. M. Kritz.]
[R SOC 490 Society and Survival
Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor Not offered 1994-95.

T R 2:30-3:45. D. T. Gurak.]
[R SOC 492 Contemporary Issues Seminars: Developments in the Pacific Rim
Spring. 1-2 credits. Not offered 1994-95 M 1:25-2:15. P. D. McMichael.]

R SOC 494 Special Topics in Rural Sociology
Fall or spring. 4 credits maximum.
S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than wice under this number.

R SOC 495 Population, Environment, and Development in Sub-Saharan Africa
Fall. 3 credits
T R 2:30-4:00. M. M. Kritz.
The 47 countries of sub-Saharan Africa are experiencing rapid social change but serious economic, environmental, and social problems. This course will examine these trends by looking at their interrelations to demographic change. Both the traditional structures and the modernizing forces shaping sub-Saharan African development will be examined, and variations stemming from ethnic and colonial influences assessed. Family, and gender systems, education, urbanization, and demographic processes will be reviewed, as well as the role of state policy in affecting population, ecological and development change.

## R SOC 497 Individual Study in Rural Sociology

Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. Staff.
Informal study may include a reading course, research experience, or public service experience

## [R SOC 603 Classical Sociological

 TheorySpring. 4 credits. S-U grades optional. Prerequisites: open to graduate students and undergraduates with permission of instructor. Not offered 1994-95.

TR 3:35-5:15. Staff.]
[R SOC 604 Theories of Social Change Spring. 3 credits. S-U grades optional. Not offered 1994-95

> T R 3:35-4:50. P. D. McMichael and S. Feldman.]

R SOC 606 Contemporary Sociological Theories of Development
Fall. 3 credits.
T R 3:35-5:20. F. W. Young
A survey of theory, empirical studies, and policy prescriptions as applied to communities and regions, especially those in lessdeveloped countries. The basic question of this survey is whether sociology can make an independent contribution to development theory. The several institutional-oriented answers to this question are critically examined against the currently dominant perspectives, fundamental and derived

## [R SOC 610 Population and

Development: Developed Nations
Fall. 3 credits. Open to graduate students, and undergraduates with permission of instructor. Not offered 1994-95.

W 1:25-4:25. D. L. Brown.]

## R SOC 618 Research Design I

Fall. 4 credits. Prerequisite: a statistics course. Offered alternate years.

T R 12:20-2:15. J. D. Francis. First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

## R SOC 619 Research Design II

Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. Offered alternate years.

T R 12;20-2:25. J. D. Francis.
The second part of the two-semester sequence in introductory graduate methods deals with principles of design, especially non-experimental designs, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special emphasis is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.
[R SOC 625 State, Economy, and Society
Fall. 3 credits. Offered alternate years. Not
offered 1994-95.
W 1:25-3:55. P. D. McMichael.]

## R SOC 630 Field Research Methods and Strategies

Fall. 3 credits.
T R 8:30-9:55 a.m. L. B. Williams. Course will cover a variety of methods: structured surveys, focus groups, in-depth interviews, participant observation, archival record analysis, among others. Frameworks by which research questions can be matched with appropriate field methodologies, choice of sample, data collection, etc., will be discussed. Assessment of strengths and weakness of various strategies of field research. Discussion of practical matters such as fieldworker recruitment and training, and data processing issues and ethnics of field work.

## [R SOC 640 Community and Changing

 Property InstitutionsFall. 3 credits. Not offered 1994-95. R 2:30-5:00. C. C. Geisler.]
[R SOC 641 Politics and Economics of Rural and Regional Development
Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered alternate years. Not offered 1994-95. M 12:20-2:50. T. A. Lyson.]

## [R SOC 642 Regional Systems and Policy

 AnalysisSpring. 3 credits. Prerequisites: a social or economic theory course and statistics, or permission of instructor. S-U grades optional. Not offered 1994-95.

F 2:20-4:30; disc to be arranged. P. R. Eberts.]

R SOC 643 Land Reform Old and New
Spring. 3 credits. Offered alternate years. S-U grades optional.

R 2:30-5. C. C. Geisler.
Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.

## [R SOC 645 Rural Economy and Society

Fall. 3 credits. Offered alternate years. Not offered 1994-95.

$$
\text { W } 7: 30-10 \text { p.m. S. Feldman.] }
$$

## R SOC 655 Advanced Techniques of

 Demographic AnalysisSpring. 3 credits. Prerequisites: R SOC 481 or CEH 438, graduate standing or permission of instructor.

T R 4:00-5:30. D. T. Gurak.
An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.
[R SOC 660 Social Analysis of Ecological Change
Fall. 3 credits. Prerequisite: graduate standing. Not offered 1994-95.

$$
\mathrm{T} 7-10: 20 \text { p.m. P. Taylor.] }
$$

## [R SOC 661 Sustainable Agriculture and

 DevelopmentFall. 3 credits. S-U grades optional. Prerequisites: graduate standing or instructor's permission. Not offered 1994-95. W 1:25-4:25. T. A. Lyson.]

## R SOC 694 Special Topics in Rural

 SociologyFall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

## R SOC 715 Comparative Research

 MethodsFall. 3 credits. Offered alternate years. M 12:20-2:50. T. A. Lyson.
This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include crossnational and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

## [R SOC 718 Multidimensional

 Measurement and Classification Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. Offered alternate years. Not offered 1994-95.T R 12:20-2:15. J. D. Francis.]

## [R SOC 719 Advanced Research Topics

Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. Offered alternate years. Not offered 1994-95.

T R 12:20-2:15. J. D. Francis.]
R SOC 721 Sociology of Environment and Development
Spring. 3 credits.
M 12:20-2:50. M. J. Pfeffer.
This course examines society/environment relations in the contemporary environmental discourse and in sociology. Students evaluate such topics as sustainability, science and ethics, and the definition of nature. The central objective is to evaluate sociological theories' treatment of the problems of environmentalism. Subsidiary objectives include the identification of key sociological issues in contemporary environmentalism, and review of environmental themes in sociological theory

## [R SOC 723 Social Movements in

 Agrarian SocietySpring. 3 credits. Offered altemate years. Not offered 1994-95.

W 1:25-4. F. W. Young.]

## [ A SOC 725 The Sociology of "Third

 World" StatesSpring. 3 credits. Offered alternate years. Not offered 1994-95.

W 1:25-3:55. S. Feldman.]
R SOC 730 Sociology of the World Economy
Spring. 3 credits. S-U grades optional Offered alternate years.

W 1:25-3:55. P. D. McMichael. Analyses of social change and development are increasingly sensitive to global context, including the sociology of the world economy as a multi-layered entity, anchored in an evolving division of world labor and interstate system. The analysis of transnational economic and cultural processes (such as food regimes, commodity chains, and international labor complexes), has substantive and methodological dimensions, considering a variety of levels and kinds of analysis of global processes. This includes global theories (and their limits), and methods of situating local processes within their worldhistorical context.

## [R SOC 741 Community Development

 and Local ControlSpring. 3 credits. Offered alternate years. Not offered 1994-95.

W 1:25-3:55. C. C. Geisler.]
[R SOC 751 Applications of Sociology to Development Programs
Spring. 3 credits. Offered alternate years. Not offered 1994-95.

W F 10:10. E. C. Erickson.]

## R SOC 771 Special Seminar

Fall or spring. Credit to be arranged. Limited to graduate students; others by permission of instructor.

## R SOC 791 Teaching Experience

Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only Staff.
Participation in the ongoing teaching program of the department.

## R SOC 792 Public Service Experience

Fall or spring. Credit to be arranged. Limited to graduate students. S-U grades optional. Staff.
Participation in the ongoing public service activities of the department.

## R SOC 871-874 Informal Study

Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

## R SOC 871 Rural Sociology

R SOC 872 Development Sociology
R SOC 873 Organization Behavior and Social Action

R SOC 874 Methods of Sociological Research

## R SOC 881 Research

Fall or spring. Credit to be arranged. Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

## Courses by Subject

Atmospheric Science: 131, 231, 250, 334, 342, $343,352,353,357,435,444,446,448,451$, 456, 652, 692, 791, 859, 959
Crop Science: $311,312,314,315,317,608$, $610,612,613,614,642,690,691,829,929$
Remote Sensing: 461, 660
Soil Science: $260,321,362,363,364,365,371$, $372,373,385,471,473,483,663,666,667$, $669,671,675,681,693,889,989$

## General Courses

SCAS 190 Sustainable Agriculture
Fall. 2 credits. Limited to 60 students. S-U grades optional.

Lec, R 9:05; labs, M 2:00-4:25,
T 10:10-12:35. T. W. Scott, G. W. Fick This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes management concepts that conserve or renew those resources for continuing benefit to society. Presentations are targeted for non-majors and students new to the field and cover information of general value. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. The laboratory is required.

## SCAS 494 Special Topics in Soil, Crop and Atmospheric Sciences <br> (undergraduate level)

Fall or spring. 4 credits maximum.
S-U grades optional.
Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

## SCAS 497 Individual Study in Soil, Crop, and Atmospheric Sciences

Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Hours to be arranged. Staff.
The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

## SCAS 498 Teaching Experience in Soil

 Science, Crop Science, and Atmospheric ScienceFall or spring. $1-5$ credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Teaching experience in soil science, crop science, or atmospheric science is obtained by assisting in the instruction of a departmental course.

## SCAS 499 Undergraduate Research

Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.

## SCAS 694 Special Topics in Soil, Crop

 and Atmospheric Sciences (graduate level)Fall or spring. 4 credits maximum. S-U grades optional.

Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 695 Planning and Reporting Research
Fall. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students.

Lec to be arranged. G. W. Fick
This course is designed to prepare students in the SCAS Department and closely related fields for planning their graduate research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

## Atmospheric Science

SCAS 131 Basic Principles of Meteorology
Fall. 3 credits.
Lecs, T R 11:15; lab, T W or R 1:25-4:25 and $M$ W 7:00-9:30 p.m.
M. W. Wysocki.

A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 231 Climate and Climate Change: Introduction to Climatology
Fall. 3 credits. Prerequisite: SCAS 131 or instructor's approval.

Lecs M W F 11:15. K. H. Cook.
Study of the features of today's climate, including a discussion of the processes that maintain the observed atmospheric circulation, moisture, and temperature distributions.
Investigation of past climates and a survey of current climate change issues.

SCAS 250 Meteorological Observations and Instruments
Spring. 3 credits. Prerequisite: SCAS 131 Lecs, M W 12:20; lab, W 1:25-3:20. M. W. Wysocki.

Methods and principles of meteorological measurements and observations, including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and datalogging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee, $\$ 45$.

## SCAS 334 Microclimatology

Spring. 3 credits. Recommended: a course in physics.
T R 10:10-11:25. D. S. Wilks.

The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined, with emphasis on the energy balance.
[SCAS 342 Theoretical Meteorology I Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. Not offered 1994-95.

M W F 10:10. W. W. Knapp.
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered
include thermodynamic processes of dry air. water vapor and moist air, and concepts of hydrostatics and stability.!

## SCAS 343 Theoretical Meteorology II

Spring. 3 credits. Prerequisites; one year each of calculus and physics.

M W F 10:10. W. W. Knapp. Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.
SCAS 352 Synoptic Meteorology I
Spring. 3 credits. Prerequisites: SCAS 342 and concurrent enrollment in SCAS 343. Lecs, T R 9:05; lab, M 1:25-3:20. M. W. Wysocki.

Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts that will be applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

## SCAS 353 Application of Fortran in

 MeteorologyFall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lec, T R 12:20-1:10; lab, F 1:25-3:20. M. W. Wysocki.

An introduction to numerical techniques using Fortran to solve meteorological problems. No previous experience with Fortran is expected.

## SCAS 357 Atmospheric Air Pollution

Fall. 3 credits. Prerequisites: SCAS 342 and one semester of chemistry or permission of instructor. Offered alternate years.

M W F 11:15-12:05. M. W. Wysocki. Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

## SCAS 435 Statistical Methods in

 MeteorologyFall. 3 credits. Prerequisite: an introductory course in statistics (e g., BTRY 215 or AG EC 310) and calculus.

T R 10:10-11:25. D. S. Wilks.
Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

## SCAS 444 Tropical Meteorology

Spring. 3 credits. Prerequisites: SCAS 343 or instructor's approval. Offered alternate years. M W F 11:15-12:05. K. H. Cook. Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal circulation, and El Nino.

## [SCAS 446 Atmospheric Modeling

Spring. 3 credits. Prerequisites: SCAS 343, 451 or instructor's approval. Offered alternate years. Not offered 1994-95.

M W F 11:15-12:05. K. H. Cook. Numerical models of the atmosphere, including simple climate, general circulation, and numerical weather prediction models. We will focus on choosing a set of governing equations for a particular application and translating that system into a diagnostic or predictive model.]

## [SCAS 448 Physical Meteorology

Fall. 3 credits. Prerequisites: a year each of calculus and physics. Offered alternate years. Not offered 1994-95.

M W F 11:15. W. W. Knapp.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.]

## SCAS 451 Synoptic Meteorology II

Fall. 3 credits. Prerequisite: SCAS 352 or permission of instructor.

Lecs, T R 9:05; lab, M 1:25-3:20. S. J. Colucci.

Advanced topics in synoptic meteorology, such as behavior of midlatitude weather systems, fronts and jets, and precipitationproducing structures.

## [SCAS 456 Mesoscale Meteorology

Spring. 3 credits. Prerequisite: SCAS 451 or permission of instructor. Offered alternate years. Not offered 1994-95.

M W F 12:20-1:10. S. J. Colucci. Structure and dynamics of mid-latitude mesoscale weather systems such as squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.]

## SCAS 652 Atmospheric Dynamics

Spring. 3 credits. Prerequisites: SCAS 451 or permission of instructor. Offered alternate years.

T R 12:20-1:35. S. J. Colucci. Advanced topics in theoretical meteorology such as atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and middle atmosphere dynamics.

## SCAS 692 Special Topics in Atmospheric

 SciencesFall or spring. 1-6 credits. S-U grades optional.

Hours to be arranged. Staff
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

## SCAS 791 Meteorology Seminar

Fall or spring. Prerequisite: permission of instructor.

Hours to be announced. Staff.
Subjects such as weather modification, paleoclimatology, and atmospheric pollution

## SCAS 859 Master's Level Thesis

Research in Meteorology
Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.

Hours by arrangement.

## SCAS 959 Doctoral-Level Thesis

 Research in MeteorologyFall or spring. Credit by arrangement. Limited to students in the graduate field.
S-U grades optional.
Hours by arrangement.

## Crop Science

## SCAS 311 Grain Crops

Fall. 4 credits. Prerequisite: SCAS 260 or BIOPL 241

Lecs, M W F 10:10; lab, M or T 1:25-4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf

Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, liming and mineral nutrition, weed control, cropping sequences, management systems, and crop improvement are considered. Grain, protein, fiber, and sugar crops are emphasized.

## SCAS 312 Forage Crops

Spring. 4 credits. Prerequisites: SCAS 260 or BIOPL 241 or equivalent. Recommended: AN SC 212.

$$
\begin{aligned}
& \text { Lecs, M W F 11:15; lab, M or T } \\
& 1: 25-4: 25 \text {. G. W. Fick. }
\end{aligned}
$$

The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.
[SCAS 314 Production of Tropical Crops
Spring. 3 credits. Prerequisite: a course in tropical crop production. Not offered 1994 95.

Lecs, M W F 10:10. Staff.
An introduction to the characteristics and culture of the principal food staple crops of the tropics and subtropics and of some of the crops grown for export. Vegetables and fruits are not emphasized.)

## SCAS 315 Weed Science

Fall. 3 credits. Prerequisite: introductory course in biology or botany.

Lecs, T R 9:05; lab, M, T, or W 2-4:25.

## J. M. DiTomaso.

Principles of weed science are examined. Emphasis is on (a) weed ecology,
(b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crops. Laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

## [SCAS 317 Seed Science and

 TechnologyFall. 3 credits. Prerequisite: BIOlL 241 or equivalent. Offered alternate years. Not offered 1994-95.

Lecs, T R 11:15; lab R 1:25-4:25; 2 all-
day field trips will be scheduled during
the semester. A. G. Taylor, Geneva
Experiment Station (Ithaca contact,
R. L. Obendorf).

The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds.]

## SCAS 608 Water Status in Plants and

 SoilsFall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years.

Lec, 1 hour to be arranged; lab, R 1:25-4:25 or as arranged. T. L. Setter Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA

## [SCAS 610 Physiology of Environmenta Stresses

Spring. 3 credits. Prerequisite: BIOPL 242 or 341. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10-11:25. P. L. Steponkus. A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.]

## SCAS 612 Seed Physiology

Spring. 3 credits. Prerequisite: plant physiology.

T R 8:30-9:55. R. L. Obendorf
Morphology, physiology, and biochemistry of cereal, legume, and oil-seed formation, composition, storage, and germination. Emphasis is on the deposition of seed reserves during seed formation, stabilization of reserves during storage, and mobilization of reserves during germination. Topics range from onfarm problems to molecular mechanisms.

## SCAS 613 Physiology and Ecology of

 YieldSpring. 3 credits. Prerequisite: plant physiology.

M W F 12:20. T. L. Setter
A study of the constraints on crop productivity from a physiological perspective. Influence of environment and genetics on the assimilation, translocation, and partitioning of carbon and nitrogen during crop ontogeny. Emphasis on growth processes of vegetative plant organs.

## SCAS 614 Research Methods in Weed

 PhysiologySpring. 2 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years.

Labs to be arranged. J. M. DiTomaso Examination of a variety of modern techniques used to study herbicide absorption, translocation, metabolism, mode of action, and mechanism of resistance. Experiments will also be designed to study herbicide behavior and detection in soils. Laboratories will be accompanied by short lectures pertinent to experimental topics.

## SCAS 642 Plant Mineral Nutrition (also BIOPL 642)

Spring. 3 credits. Prerequisite: BIOPL 341 or equivalent. Offered alternate years.

Lecs, M W F 10:10-11. L. V. Kochian, R. M. Welch.

A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements
will be emphasized to illustrate the above topics.

SCAS 690 Root-Soil Interactions
Fall or spring. 1-2 credits. S-U grades optional.

Hours to be arranged. R. W. Zobel A topic dealing with root-soil interaction will be selected during the first meeting of the term. Students will prepare one or two seminars based on published work on the topic. Possible topics include root genetics, root morphology, conservation tillage, and soil temperature.

## SCAS 691 Special Topics in Crop

 ScienceFall or spring. $1-6$ credits. S-U grades optional.

Hours to be arranged. Staff.
Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests

SCAS 829 Master's-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement Limited to students in the graduate field. S-U grades optional

Hours by arrangement.
SCAS 929 Doctoral-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. Limited to students in the graduate field S-U grades optional. Hours by arrangement.

## Remote Sensing

[SCAS 461 Remote Sensing: Environmental Applications (also Civil and Environmental Engineering 411)

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95. Lees, T R 10:10; lab, T 2:30-4:25 (a second lab sec will be scheduled if more than 15 students register). A survey of how remote sensing is applied in various environmental disciplines. Laboratory emphasis is on using aircraft and satellite imagery for inventorying and monitoring surface features in engineering, planning, agriculture, and natural resource assessments.]

## SCAS 660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)

Fall. 3 credits. Prerequisite: permission of instructor.

Lecs, T R 10:10; lab), T 2:30-4:25. W. I). Philpot.

An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

## Soil Science

SCAS 260 Introduction to Soil Science Spring. 4 credits. Prerequisite: CHEM 103, 207 or 215 . S-U grades optional Lecs, M W F 9:05; lab, M T W or R 1:25 R. B. Bryant.

A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

SCAS 321 Soil and Water Management Spring. 2 credits. Prerequisites: SCAS 190 or 260. Concurrent registration in ABEN 321 required. S-U grades optional.

Lec, M W 9:05; disc, M 1:25-4:25.
T. W. Scott, M. F. Walter.

An interdisciplinary course intended to introduce students to the general principles of soil and water interaction and to the effects of human intervention in these processes. Aspects of soil and water management, including hydrology, soil erosion, irrigation, drainage, and water quality are examined. Case studies from both the United States and the tropics are used to illustrate basic principles

## SCAS 362 Soil Morphology

Fall. 1 credit. Undergraduates only Recommended for sophomores and juniors. R 1:25-4:25; all-day field trip required. R. B. Bryant, J. M. Galloraith.

The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field
SCAS 363 Intermediate Soil Science I: Genesis, Classification, and Survey Fall, weeks 1-7. 2 credits. I'rerequisite: SCAS 260.

Lecs, M W F 10:10; lab, W 1:25-4:25 One all-day field trip is required. R. B. Bryant.

Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.
[SCAS 364 Intermediate Soil Science II: Physics
Fall, weeks 8-14. 2 credits. Prerequisites SCAS 260, one year of calculus and consent of instructor. Not offered 1994-95.

Lecs, M W F 10:10; lab, W 1:25-4:25 P. Baveye.

Description and measurement of the status of water in soils. Theory of water, solute, and heat transport. Infiltration, drainage, and redistribution. Weekly laboratory and problem-solving sessions illustrate the concepts introduced in class. Course starts at mid-semester and is part of a sequence of three intermediate Soil Science courses.]

SCAS 365 Intermediate Soil Science III: Chemistry and Microbiology
Spring. 3 credits. Prerequisite: SCAS 260. T R 10:10-11:30. M. McBride and M. Alexander.

The chemical properties and microorganisms of soil and the chemical reactions and transformations occurring in soil. This course is part of a sequence of three intermediate Soil Science courses.

## SCAS 371 Hydrology and the

 Environment (also Agricultural and Biological Engineering 371, and Geological Sciences 204)Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lecs, T R 9:05; lab, F 1:25-3:20. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, L. M. Cathles.

Introduction to hydrology as a description of the hydrologic cycle and the role of water and
chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering floods, and droughts. Case studies, shor field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.
SCAS 372 Soil Fertility Management Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor.

M W F 9:05. D. R. Bouldin
An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

## SCAS 373 Soil, Water, and Aquatic

 PlantsFall. 3 credits. Prerequisites: SCAS 260, BIO G 101-102, and CHEM 103-104 or equivalents.

> Lec, T R 11:15; lab, R 1:25-4:25. J. H. Peverly.

The success or failure of soil and water management is manifested in streams, wetlands, lakes, and aquifers. Chemical and biological changes downstream are studied and related to agricultural management techniques upstream. Basic chemical and physiological processes are presented and used to suggest appropriate responses to water management problems.

## SCAS 385 Biogeochemical Cycles,

 Agriculture, and the Environment Spring. 2 credits. Prerequisites: CHEM 103 or 207 and SCAS 260 or equivalent.Lecs, T R 11:15-12:05. J. M. Duxbury
The impact of agriculture on aspects of the global biogeochemical cycles of carbon, nitrogen, sulfur, and phosphorus is discussed and illustrated with current agricultural and environmental issues. Topics include sustainable agriculture, effects of nitrogen fixation, acid rain, global warming, and land disposal of wastes.

## SCAS 471 Properties and Appraisal of

 Soils of the TropicsSpring. 3 credits. Prerequisite: SCAS 260 or equivalent. S-U grades optional. No audits accepted. Offered altemate years.
Lecs, T R 12:20; disc, W 1:25-3:25.
A. Van Wambeke.

The course examines the conditions in which soils form, and considers ecological, geological and vegetational factors that produce the diversify that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, Francophone, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation and the characteristics of acid-sulfate soils.

## SCAS 473 Ecology of Agricultural Systems (also BIOES 473)

Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years.

Lec and disc, T R 2:30-3:45. During the first 6 weeks of class the Thursday meetings may run to $5: 00$ because of field trips. A. G. Power and staff. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.
[SCAS 483 Environmental Biophysics Fall. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Not offered 1994-95.

Lecs, M W F 11:15. S. J. Riha.
Introduction to basic principles of energy and water transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, and water dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.)

## SCAS 663 Pedology

Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Textbook recommended, not required. Offered alternate years.

Hours to be arranged. R. B. Bryant. Weathering, reactions, and processes of soil genesis. Principles of soil classification and the rationale and utilization of soil taxonomy. Development and significance of major groups of soils of the world.
SCAS 666 Advanced Soil Microbiology
Fall. 1 credit. Prerequisite: SCAS 476 or permission of instructor. S-U grades only for graduate students.

T 12:20. M. Alexander.
Discussions of current topics in special areas of soil microbiology. Particular attention is given to biochemical problems in microbial ecology.

## [SCAS 667 Advanced Soil Physics

Spring. 3 credits. Prerequisites: One year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

Hours to be arranged. P. Baveye. A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.]

SCAS 669 Organic Matter-Soils, Sediments, and Waters
Spring. 2 or 3 (with discussion) credits. Prerequisites: SCAS 260 and CHEM 357-358 or equivalent.

T R 9:05; disc W 1:25-2:15.
J. M. Duxbury.

A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

## [SCAS 671 Soil Chemistry

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Not offered 1994-95. Lecs, M W F 11:15. M. B. McBride. A detailed examination of the structure and surface chemistry of minerals common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays and oxides will be emphasized.)

## SCAS 675 Modeling the Soil-Plant-

 Atmosphere SystemSpring. 3 credits. Prerequisite: SCAS 483 or equivalent and COM S 100 or equivalent. Offered alternate years.

Lecs, T R 1:25-2:45. J. L. Hutson, S. J. Riha.

Derivation of dynamic simulation models of soil-plant-atmosphere systems and their application. Models will include water, plant nutrients, and pesticide transport and their interaction with soil and plants. Students will develop their own models and apply existing models to environmental and plant production problems.

## SCAS 681 Soil Physics Research Seminar

Fall. 1 credit. Open to graduate students. To be arranged. P. Baveye, J. Hutson, H. van Es.

Discussions of current topics in special areas of soil physics and presentation of research carried out by participants.
SCAS 693 Special Topics in Soil Science Fall or spring. $1-6$ credits. S-U grades optional.

Hours to be arranged. Staff.
Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

## SCAS 889 Master's-Level Thesis

 Research in Soil ScienceFall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.

Hours by arrangement.

## SCAS 989 Doctoral-Level Thesis Research in Soil Science

Fall or spring. Credit by arrangement. Limited to students in the graduate field. S-U grades optional.

Hours by arrangement.
Courses in "Remote Sensing" are also listed under the Department of Civil and Environmental Engineering in the College of Engineering.

## VEGETABLE CROPS

See Horticultural Sciences.

## FACULTY ROSTER

Abawi, George S., Ph_D., Cornell U. Prof., Plant Pathology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Adleman, Marvin l., M. L. A., Harvard U. Prof., Landscape Architecture
Agnello, Arthur M., Ph.D., North Carolina State U. Assoc. Prof., Entomology (Geneva)

Aist, James R., Ph.D., U. of Wisconsin. Prof. Plant Pathology
Albright, Louis D., Ph.D., Cornell U. Prof. Agricultural and Biological Engineering
Aldwinckle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)
Alexander, Martin, Ph.D., U. of Wisconsin. Liberty Hyde Bailey Professor of Soil Science, Soil, Crop, and Atmospheric Sciences
Allee, David J., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics
Altman, Naomi S., Ph.D., Stanford U. Asst. Prof., Plant Breeding and Biometry
Andersen, Robert L., Ph.D., U. of Minnesota. Prof., Horticultural Sciences (Geneva)
Anderson, Bruce L., Ph.D., U. of California at Berkeley. Assoc. Prof., Agricultural, Resource, and Managerial Economics
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Apgar, Barbara J., Ph.D., Cornell U. Assoc Prof., Animal Science
Aplin, Richard D., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics
Arneson, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology
Austic, Richard E., Ph.D., U. of California at Davis. Prof., Animal Science
Awa, Njoku E., Ph.D., Corneil U. Assoc. Prof., Communication
Baer, Richard A., Ph.D., Harvard U. Prof., Natural Resources
Bain, Mark B., Ph.D., U. of Massachusetts Assoc. Prof., Natural Resources
Bandler, David K., M.P.S., Cornell U. Prof., Food Science
Barbano, David M., Ph.D., Cornell U. Prof., Food Science
Barker, Randolph, Ph.D., Iowa State U. Prof., Agricultural, Resource, and Managerial Economics
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Bassuk, Nina L. Ph.D., U. of London (England). Prof., Floriculture and Ornamental Horticulture
Batt, Carl A., Ph.D., Rutgers U. Assoc. Prof., Food Science
Baughee, Sherene, Ph.D., SUNY Stonybrook. Asst. Prof., Landscape Architecture
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Baveye, Philippe C., Ph.D., U. of California at Riverside. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
Bedford, Barbara, Ph.D., U. of Wisconsin, Madison. Asst. Prof., Natural Resources
Beer, Steven V., Ph.D., U. of California at
Davis. Assoc. Prof., Plant Pathology
Beermann, Donald H., Ph.D., U. of Wisconsin Prof., Animal Science
Bell, Alan W.. Ph.D., U. of Glasgow (Scotland). Assoc. Prof., Animal Science
Bellinder, Robin R., Ph.D., Virginia Polytechnic Inst. and State U. Assoc. Prof., Fruit and Vegetable Science

Bergstrom, Gary C., Ph.D., U. of Kentucky Assoc. Prof., Plant Pathology
Berkey, Arthur L., Ph.D., Michigan State U. Prof., Education
Bills, Nelson L., Ph.D., Washington State U. Prof., Agricultural, Resource, and Managerial Economics
Bjorkman, Thomas N., Ph.D., Cornell U. Asst. Prof., Horticultural Sciences (Geneva)
Blake, Robert W., Ph.D., North Carolina State U. Prof., Animal Science

Boisvert, Richard N., Ph.D., U. of Minnesota. Prof., Agricultural, Resource, and Managerial Economics
Boor, Kathryn J., Ph.D., U. of California at Davis. Asst. Prof., Food Science
Bouldin, David R., Ph.D., Iowa State U. Prof., Soil, Crop, and Atmospheric Sciences
Bourne, Malcolm C., Ph.D., U. of California at Davis. Prof., Food Science and Technology (Geneva)
Boyd, R. Dean, Ph.D., U. of Nebraska. Assoc. Prof., Animal Science
Brady, John W., Jr., Ph.D., SUNY at Stonybrook. Assoc. Prof., Food Science
Brake, John R., Ph.1D., North Carolina State U. W.I. Myers Professor of Agricultural Finance, Agricultural, Resource, and Managerial Economics
Broadway, Roxanne M., Ph.D., U. of California at Davis. Assoc. Prof., Entomology (Geneva)
Brown, Dan L., Ph.D., Comell U. Assoc. Prof., Animal Science
Brown, David L., Ph.D., U. of Wisconsin. Professor, Rural Sociology
Brown, Susan K., Ph.D., U. of California at Davis. Assoc. Prof., Horticultural Sciences (Geneva)
13ryant, Ray B., Ph.D., Purdue U. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
Burr, Thomas J., Ph.D., U. of California at Berkeley. Prof., Plant Pathology (Geneva)
Butler, Walter R., Ph.D., Purdue U. Prof., Animal Science
Call, David L., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics
Capps, Susan G., Ph.D., North Carolina State U. Asst. Prof, Agricultural and Biological Engineering
Carlsen, William S., Ph.D., Stanford U. Assoc. Prof., Education
Casella, George, Ph.D., Purdue U. Prof., Plant Breeding and Biometry
Casler, George L., Ph.D., Purdue U. Prof., Agricultural, Resource, and Managerial Economics
Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin. Assoc. Prof., Plant Breeding and Biometry

## COLLEGE OF ARCHITECTURE, ART, AND PLANNING

## ADMINISTRATION

William G. McMinn, dean
Stanley J. Bowman, associate dean
Laurie Roberts, director of public affairs
Cynthia K. Prescott, director of administrative operations
Ray Dalton, director of minority educational affairs
Donna L. Kuhar, registrar
Elizabeth A. Cutter, director of admissions
Margaret Webster, curator of visual resources facility
TBA, director of career office

## FACULTY ADVISERS

Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

First-year students in the fine arts department are assigned faculty advisers for the first year Students may then choose advisers in their major area of concentration
Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.
All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
Kent L. Hubbell, chair, Department of Architecture

Richard S. Booth, chair, Department of City and Regional Planning
Jean Locey, chair, Department of Art.

DEGREE PROGRAMS

|  | Degree |
| :--- | :--- |
| Architecture | B.Arch |
|  | B.F.A. |
| Fine Arts | B.F.A. |
| History of Architecture and Urbanism | B.S. |
| Urban and Regional Studies | B.S. |

The college offers programs leading to the bachelor's degree-the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.
Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants. Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

## FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture, and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture and shop facilities are in the Foundry. The Green Dragon Cafe, a student eatery and lounge, is located in the basement of Sibley Dome. The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P . Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

## Libraries

The Fine Arts Library, in Sibley Hail, serves the College of Architecture, Art, and Planning
through its collections on architecture, fine arts, city and regional planning and landscape architecture. The library, with more than 150,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,900 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, in Sibley Hall contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 400,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

## Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Comell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Hall and in the Olive Tjaden Gallery in Olive Tjaden Hall.

## Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Massimo in the center of the historical city next to such wellknown Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.
The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited.

## COLLEGE ACADEMIC POLICIES

## Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

## Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

## Scholastic Standards

Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than $C(2.0)$. The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Waming means that the student's performance is not up to expectations Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.
2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.
3) Required leave of absence: Academic Deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the department chair. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Comell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Admissions Committee. Application for spring-term readmission must be made by November 15 , and application for fall-term readmission must be made by April 15. Refer to the Architecture, Art \& Planning Handbook (Whitebook) for further information regarding required leave of absence.
4) Required withdrawal: May Not Reregister, College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of
applying for admission to another division of the university.
The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient.
A cumulative average of at least $C-(1.7)$ is required for graduation.

## ARCHITECTURE

Kent Hubbell, chair; M. Cruvellier, W. Goehner, D. P. Greenberg, G. Hascup, L. F. Hodgden, M. Jarzombek, A. Kira, B. G. MacDougall, A. B. Mackenzie, W. G. McMinn, V. Meyers, J. C. Miller, L. Mirin, V. Mulcahy, J. Ochshorn, C. F. Otto, A. Ovaska, C. W. Pearman, H. W. Richardson, M. L. Schack, J. P. Shaw, A. Simitch, V. K. Warke, J. Wells, M. Woods, J. Zissovici

## Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.
The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence courses in design, consisting of studio work augmented by lectures and seminars dealing with theory and method, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, visual studies, environmental science, structures, and building technology provide a base for the work in design.
In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.
The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

## Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome.

This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

## Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601-602 or 603-604 for Arch 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.
Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

## Curriculum

## First Year

Fall Term
Credits
101 Design I 6
181 History of Architecture I 3
151 Drawing I 2
Math 111 Calculus or Math 106
or out-of-college elective

3

Free
Of the electives, 15 credits are to be taken outside the College of
Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college.
Total credits

## Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in
architecture requires the Bachelor of Architecture degree or its equivalent for entrance.
Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the tenterm design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.
For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.
Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

## Alternative Programs

## Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

## Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.
Admission requirements. Two years of undergraduate study; Arch 181 and 182, or the equivalent; and one 6 -credit studio in architecture (or Arch 103, which is available during the fall semester for students with no previous studio work) are required. Students transferring from a B.Arch. program must be in good standing in their design sequence.

## Procedure. Students from Cornell may

 transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. It is required that, before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss procedural matters and program content.Students who wish to transfer to the program from outside Comell must apply to the Department of Architecture by March 15.

Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, 135 East Sibley Hall, Ithaca, New York 14853-6701.

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines

1) 24 credits of 300 -level courses in architectural history: Arch 380 through Arch 399
2) $\mathbf{1 2}$ credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600 -level seminar plus Arch 499 , offered for honors candidates only
3) One 300-, 400-, or 600 -level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of $B$ or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

## Dual Degree Options

Students can earn both the B.S. and B.Arch degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study. Ordinarily this option requires five years of study and assumes the satisfactory fulfillment of requirements in both the B.S. and B.Arch. programs.
Students currently enrolled in the College of Arts and Sciences at Comell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.
Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

## Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, including thesis, are offered at first-through fifth-year levels in Ithaca. Normally there is also a design program abroad for third-,
fourth-, and fifth-year students.
Students from schools of architecture other than Cornell are welcome to apply to the college for admission to any summer programs.
At the graduate level the summer term is devoted to problems forming part of the student's program of work. The term may carry residence credit equal to that of a normal academic term. Participation in the program cannot be undertaken without the consent of the student's Special Committee.
Furniture design, architectural structures, and computer-aided design are offered as elective courses, contingent upon student interest and faculty availability
The department offers a Career Discovery Program in Architecture for high school students and undergraduates interested in exploring the possibility of a career in architecture.

## Architectural Design

Courses in brackets are not offered this year. A studio fee of $\$ 65$ is charged each semester for every design course (these fees are subject to change).

## Sequence Courses

ARCH 101 Design I
Fall. 6 credits. Limited to department students.

Studios and lecs, M W F 2-6. Staff. An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

## ARCH 102 Design II

Spring. 6 credits. Limited to department students. Prerequisite: Architecture 101 and Architecture 151. A continuation of Architecture 101

Studios and lecs, M W F 2-6. Staff. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

## ARCH 201-202 Design III and IV

Fall and spring. 6 creclits each term. Coregistration in Architecture 231-232 and completion of Architecture 151-152 required. Limited to department students. Prerequisite for Architecture 201 is Architecture 102 and Architecture 152. Prerequisite for Architecture 202 is Architecture 201.

Studios and sems, M W F 2-6. Staff.

## ARCH 301-302 Design V and VI

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 301 is Architecture 202. Prerequisite for Architecture 302 is Architecture 301.

Studios and sems, M W F 2-6. Staff.

## ARCH 401-402 Design VII and VIII

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 401 is Architecture 302. Prerequisite for Architecture 402 is Architecture 401.

Studios and sems, M W F 2-6. Staff. Programs in architectural design, urban design, or architectural technology and environmental science, etc

## ARCH 501 Design IX

Fall or spring. 6 credits. Limited to department students. Prerequisite: Architecture 402.

Studios and sems, M W F 2-6. Staff. Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student's advisory committee.

## ARCH 502 Design $X$-Thesis

Fall or spring. 8 credits. Prerequisite: Architecture 501 or Architecture 500 and Architecture 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

Studios, M W F 2-6. Staff.

## ARCH 601-602 Special Program in

 Architectural DesignFall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

## ARCH 603-604 Special Program in Urban Design

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

## Graduate Courses

ARCH 701-702 Problems in Architectural Design
Fall and spring. 9 credits each term.
Studio and sem, hours to be arranged. Staff.
Basic first-year design course for graduate students whose major concentration is architectural design.

## ARCH 703-704 Problems in Urban Design

Fall and spring. 9 credits each term.
Studio and sem, hours to be arranged. Staff.
Basic first-year design course for graduate students whose major concentration is urban design.

## ARCH 801 Thesis or Research in Architectural Design

Fall or spring. 9 credits. Prerequisite: Architecture 701 and Architecture 702.

Hours to be arranged. Staff.
Second-year design course for graduate students whose major concentration is architectural design.

## ARCH 802 Thesis or Research in Urban

 DesignFall or spring. 9 credits. Prerequisite: Architecture 703 and Architecture 704. Hours to be arranged. Staff.
Second-year design course for graduate students whose major concentration is regional design.

## Elective Design Courses

ARCH 103-104 Elective Design Studio 103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for Architecture 103:
permission of instructor required. Prerequisite for Architecture 104: Architecture 103 and permission of instructor M W F 2-6. Staff.

## ARCH 303 Special Problems in Architectural Design

Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form Hours to be arranged. Staff.
Independent study.
ARCH 200, 300, 400, 500 Elective Design Fall or spring. 6 credits each term. Open by permission to transfer students who have not been assigned to a sequence course.
Prerequisite: permission of department office Each student is assigned to a class of appropriate level. Prerequisite for Architecture 500 is Architecture 402.

M W F 2-6. Staff.

## ARCH 605 Special Problems in Design

 Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor.Hours to be arranged. Staff.
Independent study
Related Courses and Seminars
ARCH 110 Introduction to Architecture: Design Studio
Summer session. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year. Studio M T W F 1:30-4:30. Staff. A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project

## [ARCH 111 An Introduction to Architectural Design

Fall or spring. 4 credits. Open to out-ofdepartment students only. Not offered 1994 95.

Studio T R 2:30-4:25. Staff.
An introduction to architectural design as a conceptual discipline. Exercises will develop an understanding of architectural space and its elements.]

ARCH 317 Contemporary It alian Culture Fall or spring. Variable credit (maximum, 3). For students in the Rome program only

Staff and visiting faculty.
This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits each term
T 1:25-4:25. M. Schack and staff.
An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's
responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.
[ARCH 412 Professional Seminar
Fall or spring. 3 credits. Washington Program only.]

## ARCH 510 Thesis Introduction

Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with Architecture 500. Prerequisite for Architecture 500 is Architecture 402. Architec ture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Rome

Lecs and sems. Staff.
Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

## ARCH 610 Graduate Design Seminar

Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program.

Seminar. Hours to be arranged. Staff. Issues in architectural and urban design. Required for first-year graduate students in design.

## ARCH 611-612 Urban Housing

 Developments611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

Staff.

## ARCH 613 Transportation

Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Sem, hours to be arranged. Staff.
The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

## ARCH 614 Low-Cost Housing

Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

T 2-4:30. H. W. Richardson.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.
ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619 , spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year.

Hours to be arranged. Staff and guest lecturers.
A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

## Architectural Theory

ARCH 130 An Introduction to Architecture: Lecture Series Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and
any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year. Lecs M T W F 9:00-12:00. Staff. A survey course that covers the many facets of architecture: history, design principles, preservations, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

## ARCH 131 An Introduction to Architecture

Fall. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Lecs T R 1:25-2:15. Disc to be arranged. Staff, guest lecturers. Intended to familiarize non-architecture students with the art and science of architecture. Fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus

## ARCH 132 An Introduction to

 ArchitectureSpring. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Lecs T R 1:25-2:15. Disc to be arranged. Staff, guest lecturers.
Non-architecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Crosshistorical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

## ARCH 231 Architectural Analysis I

Fall. 2 credits. Architecture students must register concurrently in Architecture 201.

Studios and lecs, T 1:25-3:20. Staff. An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

## ARCH 232 Architectural Analysis II

Spring. 2 credits. Architecture students must register for this course concurrently with Architecture 202.

Studios and lecs, T 1:25-3:20. Staff. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

## ARCH 335 Theory of Architecture

Fall or spring. 3 credits. Prerequisite: Architecture 231-232 or permission of instructor. Not offered every year.

Lecs, T R 4:40-6:30. L. F. Hodgden.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year. Lecs, T R 4:40-6:30. L. F. Hodgden. Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture. Le Corbusier's architecture and urban theories, architectural sequence,
facades, the free plan. "DOM-INO" theory.

## ARCH 337 Special Investigations in the Theory of Architecture I

Fall or spring Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. Staff.
Independent study.
ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite permission of instructor. Not offered every year.

Hours to be arranged. V. Warke and visiting faculty.
Topic to be announced before preregistration.
ARCH 339 Elements, Principles, and Theories in Japanese Architecture Spring. 3 credits. Not offered every year. Seminar. Hours to be arranged. L. Mirin, C. Pearman.

An examination of Japanese architecturebuildings and gardens-and their contextslandscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

## ARCH 431 Theory of Architecture

Fall. 3 credits. Prerequisite: third-year status. Not offered every year.

Lecs, T R 4:40-6:30. L. F. Hodgden. Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

## ARCH 432 Theory of Architecture

Spring. 3 credits. Prerequisite: third-year status. Not offered every year.

Lecs, T R 4:40-6:30. L. F. Hodgden. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

## ARCH 435 Architecture and

 RepresentationFall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of Architecture 231-232. Not offered every year.

Lecs, disc, and reviews, T R 2:30-4:30. V. Warke.

A study of architecture as it functions as a representational art, referring to its past while inferring its present.

## ARCH 635 Critical Theory in

 ArchitectureSpring. 3 credits. Prerequisite: permission of instructor. Not offered every year

Sem, hours to be arranged. V. Warke. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. Staff.
Independent study.
ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. Staff
Topic to be announced before preregistration.
ARCH 639 Principles of Design Process Fall or spring. 3 credits. Limited to third-year architecture students and above; students in other colleges must have permission of instructor. Not offered every year.

Sems, M W 10:10-12:05. A. Mackenzie. Analysis of the major theories and techniques of design developed during the past fifteen years, with special emphasis on application to the solution of whole problems in architectural design.

## Architecture, Culture, and Society <br> ARCH 342 Architecture as a Cultural System

Spring. 3 credits. Architecture 445, 446, 447. or 448 can substitute with permission of instructor.

M W F 10:10-11:00. B. MacDougall. What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is a significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geomerries of non-Western traditions, and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations In Architecture, Culture, and Society Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. B. MacDougall. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each rerm.
Prerequisite: permission of instructor. Hours to be arranged. Topic to be announced. B. MacDougall.
Topic to be announced before preregistration.

## [ARCH 445 Architecture and the Mythic

 ImaginationFall. 3 credits, Prerequisite: Architecture 342 or permission of instructor. Not offered 1994-95.

M W F 10:10-11:00. B. MacDougall. This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious
imagination. Certain themes that are common to a range of cultures are explored in detail.
They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.]

## ARCH 446 Topics in Architecture,

 Culture, and SocietyFall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Hours to be announced. B. MacDougall.
[ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered 1994-95.

> R 2:30-4:30. B. MacDougall.

This course explores the relationship between visionary architecture of the late 19 th and 20 th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.]

## [ARCH 448 The Indian Example and the Visual Tradition in Culture

Spring, 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered 1994-95.

T R 2:30-4:30. B. MacDougall. This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."]

## [ARCH 647-648 (667-668) Architecture <br> in Its Cultural Context I and II

647, fall; 648, spring. 4 credits each term Prerequisite: permission of instructor. Not offered 1994-95.

Sem, M W F 10:10. B. MacDougall. Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.]

## ARCH 649 Graduate Investigations in

Architecture, Culture, and Society Fall or spring. Variable credit (maximum 4) Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. B. MacDougall. Independent study.

## Visual Studies

Darkroom fees charged for all photography courses

## ARCH 151 Drawing I

Fall. 2 credits.
Studios, T R 2:30-4:25. Staff
Freehand drawing with emphasis on line and perspective representation of form and space

## ARCH 152 Drawing II

Spring. 2 credits. Prerequisite: Architecture 151.

Studios, T R 2:30-4:25. Staff
Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

## ARCH 251 Introductory Photo I (also Art

 161)Fall or spring. 3 credits each term.
Hours to be arranged. Art staff.
For description see Art 161
ARCH 351 Photography II (also Art 261)
Spring. 4 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor

Hours to be arranged. Art staff.
For description see Art 261

## [ARCH 356 Architectural Simulation Techniques

Fall or spring. 3 credits. Prerequisite Architecture 151 or permission of instructor.
Not offered 1994-95
Lec and studio, hours to be arranged G. Hascup

Two- and three-dimensional simulation techniques in architecture. Emphasis on simulation of environment, space, materials, and lighting as visual tools for architectural design.]

## ARCH 450 Architectural Publications

Fall and spring. Variable credit (maximum 3). May be repeated for credit

Lecture and studio, hours to be arranged. Staff.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

## ARCH 457 Special Project in Photography

Fall or spring. Variable credit (maximum, 3) Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year.

Hours to be arranged. Staff.
Independent study.

## ARCH 458 Special Investigations in

 Visual StudiesFall or spring. Variable credit (maximum, 3). Prerequisites: permission of instructor and approved independent study form.

Hours to be arranged. Staff.
Independent study.

## ARCH 459 Special Topics in Visual

 Studies IFall or spring. 3 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Topics to be announced before preregistration.

## ARCH 658 Special Investigations in

 Visual Studies IIFall or spring. Variable credit (maximum 4) Prerequisites: permission of instructor and approved independent study form.

Hours to be arranged. Staff
Independent study.
ARCH 659 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite:
permission of instructor
Hours to be arranged. Staff
Topic to be announced before preregistration

## Architectural Science and Technology Structures

## ARCH 263 Structural Concepts

Fall. 4 credits. Prerequisite: Mathematics 111 or approved equivalent.

Lecs and sems, T R 9:05-11. Staff.
Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264 Structural Elements
Spring. 3 credits. Prerequisite: Architecture 263.

Lecs and sems, T R 9:05-11 M. Cruvellier Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

## ARCH 363 Structural Systems

Fall. 3 credits. Prerequisite: Architecture 264. Lec and sems, M W 9:05-11:00.
M. Cruvellier.

Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction

ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 263, 264, and 363 or permission of instructor. Not offered every year.

Hours to be arranged. Staff
Topic to be announced by preregistration
ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. Staff.
Independent study

## Construction

[ARCH 160 The Mistory of Architectural Technology
Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered 1994-95.

## Staff.

Architectural technology is a seemingly illogical blend of scientific knowledge and empirical experience. Whereas it may seem chaotic to the nonprofessional, it is a product of logic in the widely differing areas of design, structure, installation, production and erection, material use, law, economics, and historical development. The evolution of this interdependence is treated using examples of architectural and civic engineering works and processes.]

## [ARCH 161 An Introduction to Building

 TechnologyFall. 3 credits. Open to out-of-department students only. Not offered 1994-95.

Lecs T 2:30-4:25. Staff.
An introduction to building technology, materials, and construction systems for nonarchitecture majors. Topics will include structure (why buildings stand up); enclosure (mediation of environmental conditions); mechanical systems (how buildings provide comfort, hygiene, and life safety); and interior surfaces (walls, floors, ceilings, acoustical behavior, and fire safety). The relationship between the principles and practices underlying the construction of buildings ("technology") and what buildings look like ("design") will also be explored. Concepts rather than computation will be emphasized.]

## ARCH 262 Building Technology,

 Materials, and MethodsSpring. 3 credits.
Lecs, M W F 12:20-1:10. J. Ochshorn Properties of materials-their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly

## ARCH 465 Special Topics in

 ConstructionFall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262 or permission of instructor. Not offered every year.

Hours to be arranged. Staff
Topic to be announced by preregistration.
ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3) Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. Staff.
Independent study

## Environmental Controls

ARCH 261 Environmental Controls-site Planning
Fall. 3 credits.
Lecs, M W F 11:15-12:05. J. Ochshorn The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

## ARCH 361 Environmental ControlsLighting and Acoustics

Fall. 3 credits.
Lecs, T R 11:15-1:10. Staff
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

## ARCH 362 Environmental ControlsMechanical and Passive Solar Systems

Spring. 3 credits.
Lecs, T R 11:15-1:10. Staff. Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

## ARCHITECTURE, ART, AND PLANNING - 1994-1995

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 261, 361, and 362 or permission of instructor. Not offered every year.

Hours to be arranged. Staff.
Topic to be announced by preregistration.
ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3) Prerequisite: permission of instructor and approved independent study form.

Hours to be arranged. Staff. Independent study.

## Computer Applications

ARCH 374 Computer Graphics and Visualization (also Computer Science 417)
Spring. 3 credits. Prerequisites: two terms of calculus and Computer Science 211, or equivalent. Not offered every year.

2 lecs, 1 lab. Staff.
Introduction to the principles of interactive computer graphics, including input techniques, display devices, display files, interactive graphic techniques, two- and threedimensional computer graphics, perspective transformations, hidden line and hidden surface algorithms, and color-picture generation.

## ARCH 375 Practicum in Computer Graphics (also Computer Science 418)

Spring. 2 credits. Prerequisite: Computer Science 211. Recommended: Computer Science 314. Corequisite: Architecture 374 Not offered every year

1 lab
Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid-image generation on raster graphics displays.

## ARCH 378 Computers in Architecture

 SeminarFall or spring. 3 credits. Prerequisites Computer Science 100 or permission of instructor. Not offered every year

Hours to be arranged. H. Richardson and staff.
Exploration of the use of computers in a variety of ways encompassing architectural practice and education. Use of the computer is not required for this course

## ARCH 379 Design by Computer

Spring. 3 credits. Prerequisites: Limited to third-year students and above. Not offered every year.

Hours to be arranged. Staff Exploration of the formalization of the design process for compatability with the computer, and the role of computers in design. Lecture with CAD lab.

## ARCH 476 Special Topics in Computer

 ApplicationsFall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 374 or 379 or permission of instructor. Not offered every year.

Hours to be arranged. Staff
Topic to be announced by preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum, 4). Limited to third-year students and above. Prerequisites: Architecture 374 plus concurrent registration in Computer
Science 314 or equivalent, and permission of instructor.

Hours to be arranged. D. P. Greenberg and staff.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays

## Graduate Courses

ARCH 761-762 Architectural Science Laboratory
761 , fall; 762 , spring. 6 credits each term. Open to architectural science graduate

## students only.

Hours to be arranged. Staff
Projects, exercises, and research in the architectural sciences.

## ARCH 763-764 Thesis or Research in

 Architectural Science763 , fall; 764 , spring. Variable credit (maximum, 12). Limited to architectural science graduate students.

Hours to be arranged.
Independent study.

## Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take Architecture 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

## Sequence Courses

ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain.

T R 11:15-1:10. Staff
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

## ARCH 182 History of Architecture II

Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of Architecture 181

T R 11:15-1:10. Staff.
The history of the built environment as social and cultural expression from more recent times to the present. Themes, theories, and ideas are addressed in greater detail for architecture and urban design leading to the present.

## Directed Electives

ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek This course, in which classroom discussion and debates play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy
ARCH 381 Greek and Roman Architecture and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek. The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

## ARCH 382 Architecture of the Middle

 AgesFall. 4 credits. Prerequisites: Architecture 181-182 or permission of instructor. Credit for this course may be obtained by taking History of Art 332. Not offered every year.

Hours to be announced. R. G. Calkins. A survey of medieval architecture from the Early Christian period to the late Gothic (A.D. 300-1500). Emphasis is given to the development of structural systems, form, function, and meaning of important medieval buildings.

## ARCH 383 The City

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek. This course looks at the development of urban form and urban consciousness from the bronze age to the industrial revolution. It studies conceptions of the city, competing urban paradigms, images of cities both real and fictive, as well as the religious and cultural practices associated with city design.

## ARCH 384 The Italian Renaissance:

Architecture, Politics, and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Jarzombek. This course focuses on the leading architects and theorists of the Renaissance from within the context of the political and cultural developments in Italy from 1300 to the midsixteenth century. The course also investigates specific architectural problems faced by designers as well as questions of architectural patronage, practices, and theories

## ARCH 385 Magnificent UtilityArchitecture and the Arts of Persuasion

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. C. F. Otto. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth CenturyStyle, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year

Hours to be announced. M. Woods. An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of inclustrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

## ARCH 388 Modernism

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. C. F. Otto. Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in the service of the state during the 1930s.
ARCH 389 Architecture, Revolution and Tradition
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. C. F. Otto. From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism-the doctrine of unlimited government controlwas challenged; Enlightenment attitudescommitments to human reason, science and education-gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

## ARCH 390 American Architecture and

 Building IFall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Woods. A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

## ARCH 391 American Architecture and Building II

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Woods. A continuation of Architecture 390 but may be taken independently. An account of American
architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

## ARCH 392 Modern Architecture On Film

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Woods. An exploration of certain themes deemed critical to modem architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre. literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

## ARCH 393 The Cumulative City

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. C. F. Otto. Well established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

## ARCH 394 Toward the Millenium

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. C. F. Otto. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

## ARCH 395 Contemporary Issues in the Built Environment

Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be announced. M. Woods and

## S. Christopherson.

A consideration of how certain social, cultural, political, ethical, and economic issues are manifest in the architectural and built environments of the United States. Overarching issues will be examined through case studies such as the question of monuments and monumentality in a contemporary, multicultural society through the Vietnam Memorial in Washington, D.C., Holocaust museums and memorials, and the preservation of the Audubon Ballroom as a memorial to Malcolm X. Historical concerns and examples
will be brought to bear on these contemporary manifestations of preservation, monumentality, gender, class, professional responsibility, and ethics and design as a collaborative art. A course for architects, planners, and preservationists but also clients and users of buildings and landscape.

## ARCH 396 Special Topics in the History

 of Architecture and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.Hours to be arranged. M. Jarzombek. Topic to be announced.
ARCH 397 Special Topics in the History of Architecture and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

Hours to be arranged. C. F. Otto. Topic to be announced.

## ARCH 398 Special Topics in the History

 of Architecture and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.Hours to be arranged. M. Woods. Topic to be announced.

## ARCH 399 Special Topics in the History

 of Architecture and Urbanism Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.Hours to be arranged. Staff.
Topic to be announced.

## Courses in Preservation

ARCH 583 Measured Drawing (also City and Regional Planning 567)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.

Hours to be announced. M. A. Tomlan. Combines study of architectural drawings as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.
ARCH 584 Problems in Contemporary Preservation Practice (also City and Regional Planning 563)
Spring. Variable credit (maximum, 3).
Hours to be announced. Staff.
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed,
presented by staff and guest lecturers.
ARCH 585 Perspectives on Preservation (also City and Regional Planning 562)

Fall. 3 credits.
Hours to be announced. J. Cody. Introductory course for preservation planning. The rationale for, and methods of, using existing cultural and aesthetic resources in the planning and design of regions and cities.
ARCH 586 Documentation for Preservation (also City and Regional Planning 560)

## Fall. 3 credits

Hours to be announced. M. A. Tomlan and visiting lecturers.

Methods of collecting, recording, processing, and analyzing historical architectural and planning materials.

## ARCH 587 Building Materials

 Conservation (also City and Regional Planning 564)Spring. 3 credits. Open to juniors, seniors, and graduate students.

Hours to be announced. M. A. Tomlan. A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

## ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also City and Regional

 Planning 561)Fall. 4 credits.
Hours to be announced. Staff. Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

## Graduate Seminars in the History of Architecture and Urbanism

ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff. Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and secondyear graduate students in the History of Architecture and Urbanism program.

## ARCH 682 Seminar in Urban History

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. M. Jarzombek.
Topic to be announced.

## ARCH 683 Seminar in the History of

 TheoryFall or spring. 4 credits. Prerequisite permission of instructor. Not offered every year.

Hours to be arranged. M. Jarzombek. Topic to be announced.
ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. M. Jarzombek.
Topic to be announced.
ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. C. F. Otto.
Topic to be announced.

[^0]Hours to be arranged. C. F. Otto. Topic to be announced.

## ARCH 689 Seminar in the History of Cities

Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. C. F. Otto.
Topic to be announced.

## ARCH 690 Seminar in American

 Architecture, Building, and Urbanism Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.Hours to be arranged. M. Woods. Topic to be announced.
ARCH 692 Seminar in NineteenthCentury Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. M. Woods.
Topic to be announced.
ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisites: permission of instructor. Not offered every year.

Hours to be arranged. M. Jarzombek. Topic to be announced.
ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. C. F. Otto.
Topic to be announced.
ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. M. Woods.
Topic to be announced.
ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year.

Hours to be arranged. Staff.
Topic to be announced.

## Independent Study, Thesis, Dissertation

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements.

Hours to be arranged. Staff.
Independent study for undergraduate students.
ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

Hours to be arranged. Staff.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Independent study for graduate students.
ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits.
Hours to be arranged. Staff.
Independent preparation of the M.A. essay, often developed from topics investigated in Arch 680.

## ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism

Fall or spring. Variable credit.
Hours to be arranged. Staff.
Independent study for the doctoral degree.

## ART

J. N. Locey, chair; R. Bertoia, Z. Blum,
S. Bowman, N. D. Daly, V. G. Kord, E. Meyer,
E. Mikus, G. Page, B. Perlus, S. Poleskie,
J. L. Squier, W. S. Taft, K. WalkingStick,
G. S. White, and visiting critics.

## Undergraduate Program

The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first three semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last three years. Beginning with the third term, students concentrate on painting, sculpture, photography, or printmak ing. They may elect additional studio work in any of these subjects during the last two years, with the consent of the instructor, providing the courses are taken in sequence and at the hours scheduled. These courses are designed to promote a knowledge and critical understanding of these arts and to develop the individual student's talent. All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression.
Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.
The curriculum in ant is an independent program of study within the College of Architecture, Art, and Planning. However, the intimate relationships between the fine arts and training in architecture and city planning is a source of special strength in the Cornell program and affords unusual benefits to the students in these three disciplines.
Although the undergraduate curriculum in art is an excellent background for a career in applied art and offers courses in the use of graphics in modern communications, no specific technical courses are offered in such areas as interior design, fashion, or commercial art.
The department discourages accelerated graduation. However, a student may petition
for consideration of early graduation by submission of a petition to the faculty before course enrollment in the spring semester of the student's junior year
A candidate for the B.F.A. degree who also wants to earn a Bachelor of Arts degree from the College of Arts and Sciences can arrange to do so. This decision should be made early in the candidate's career (no later than the third semester), so that he or she can petition to be registered in both colleges simultaneously. Each student is assigned an adviser in the College of Arts and Sciences to provide needed guidance. Those students who are interested primarily in the history rather than in the practice of art should apply for admission to the College of Arts and Sciences with the objective of pursuing a major in the Department of History of Art in that college. Department of Art studio courses may then be taken as electives.

The B.F.A. program is designed so that students may fulfill the degree requirements of 130 credits with a minimum of 66 credits taken in the Department of Art and a minimum of 55 credits taken outside the department. Within these ranges, students may design their own programs subject to the following limitations:

1) Students must plan their programs to complete 31 credits in one of the studio areas (painting, printmaking, sculpture, or photography), or 37 credits in a special concentration in multimedia. This multimedia program will enable students to fulfill concentration requirements by combining several studio disciplines including out-of-department studio courses such as those offered by the departments of music, theatre, and dance, etc. The dualconcentration requirement can be satisfied by taking 23 credits in one of the following studio areas: painting, photography, printmaking, or sculpture and 17 credits in any other area or drawing. Thesis and prethesis must be taken in the same area of concentration (i.e., 23 credits). All B.F.A. students must complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition.
Students must take four introductory courses in the disciplines of painting, printmaking, sculpture, and photography. They must also take three second-level courses from among the four disciplines. In the area of printmaking, the second-level requirement is fulfilled by taking a second introductory course in lithography, etching, or screen printing.
2) A minimum of 55 electives credits must be taken outside of the department. Students are required to take courses from among three groups which include: Physical and Biological Sciences (minimum of two courses, 6 credits); Social Sciences and History (minimum of three courses, 9 credits); and, Humanities and Expressive Arts (minimum of three courses, 9 credits). The History of Art requirement is 16 credits (four at three credits each and one fourcredit course). One course must be taken in each of the following areas:
Modern: 260, 265, 270, 361, 362, 364, 366, 367, 370, 376.
Non-Western: 280, 380, 381, 383, 384, 385, 386, 389, 396.

Renaissance and Baroque: 245, 341, 342, 343, $344,345,350,351,354,355$.

Classical: 220, 221, 320, 322, 323, 325, 327, 328, 329
Elective: Any art history elective at the 200 level or above or any archirectural history elective.
The university requirement of two terms in physical education must be met.
A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962.
Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work. No student may study in absentia for more than two terms.

## Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. The Rome studio is offered by the Department of Art. Additional courses in art and architectural history, contemporary Italian culture, and Italian language are offered by other departments participating in the program.

## Curriculum

Students are expected to take an average course load of 16 credits per semester during their four years. They must complete a minimum of four introductory courses in painting, sculpture, printmaking, and photography and four in drawing by the end of the third year. All studio courses may be repeated for elective credit.

## First Year

Fall Term
Credits
111 Introductory Art Seminar
121 Introductory Painting
141 Introductory Sculpture

## 151 Drawing I

Art history elective
Elective (freshman writing seminar)

## Spring Term

One of the following:
110 Color, Form, and Space 131 Introductory Etching 132 Introductory Graphics 133 Introductory Lithography
152 Drawing II
161 Introductory Photography
Elective

## Second Year <br> Fall Term

Ant 2nd year studio 7-8
Art history elective
251 Drawing III

Elective(s)
-
3

## Spring Term

Art 2nd year studio 3-4
Art Studio (concentration)
Art history elective
252 Drawing IV
Elective(s)
16-17

## Third Year

Fall Term
Art studio (concentration) 4
311 Issues in Contemporary Art 3
Aft history elective
Electives

Spring Term
Art studio (concentration)
Art history elective
Electives
16-17

## Fourth Year

Fall Term

| Fourth-year studio concentration | 6 |
| :--- | ---: |
| Electives | 11 |
|  | 17 |

## Spring Term

Senior thesis studio concentration
Electives
10-11

## Graduate Program

The Master of Fine Arts program requires four terms of residence and sixty credits; it is intended for those who want to further their education as artists. Candidates must complete eighteen credits of course work in the history of art, either as a graduate or undergraduate student and must eam at least 12 credits for academic work outside the Department of Art.
Every M.F.A. candidate must (1) prepare a written thesis, (2) offer a thesis exhibition of studio work completed during residency, and (3) give an oral defense of the written thesis and exhibition. The written thesis may deal with the major concerns of the student's own work or with the aesthetic or historical issue in art. The oral defense of the written thesis is presented at the time of the thesis exhibition.
The art programs are housed in buildings that are open twenty-four hours a day (for students enrolled in our courses) and are near the Fine Arts Library (about 150,000 volumes) and the university's Herbert F. Johnson Museum of Art.

## ARCHITECTURE, ART, AND PLANNING - 1994-1995

Graduate students in the painting program work in private studios housed in Olive Tjaden Hall.
The sculpture program has its own building, a 45-by-180 foot converted foundry with 14 -foot ceilings and a bronze casting facility. Separate studios, complete gas- and arc-welding facilities, heavy-duty grinders, a drill press, a band saw, and a variety of portable power tools are provided.
In the printmaking program, students study in the various techniques, including relief, intaglio, lithography, serigraphy, and various photographic processes. Experiment and tradition, theory, history, and practice are part of the program. Printmaking program facilities are in Olive Tjaden Hall and include etching presses, lithographic presses, and proof presses.
The photography program involves the study of various photographic processes such as black and white, color, nonsilver, and largeformat, with emphasis on both aesthetics and technique. Photography facilities are located in Sibley Hall.

## Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites and who have permission of the instructor.
Fees are charged for all Department of Art courses. For fine arts majors the fee is $\$ 40$ each semester. Students from outside the department are charged $\$ 20$ a course. In addition, there are darkroom fees for all photography courses.
To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses. Students wanting to satisfy Cornell degree requirements may petition to have these courses substituted for fall- or spring-term required courses.

## Courses in Theory and Criticism

## ART 110 Color, Form, and Space

Spring. 3 credits. Fall enrollment limited to B.F.A. candidates.

Hours to be arranged. N. Daly.
A study of traditional and contemporary ways of drawing and painting. An analysis of color theory and pictorial space.
ART 111 Introductory Art Seminar Fall. 1 credit. S-U only. Limited to B.F.A students.

Hours to be arranged.
Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.
ART 311 Issues in Contemporary Art Fall. 3 credits.

Hours to be arranged. S. Poleskie. A seminar course in issues of contemporary art, including lectures by visiting artists.
ART 317 Art in Rome: Early Christian to the Baroque Age
Fall. 4 credits.
E. Parloto or visiting faculty

General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renais-
sance and Baroque periods. Weekly lecture and field trips.

## ART 318 Art in Rome: Renaissance in Rome and Florence

## Spring. 4 credits.

Hours to be arranged. E. Parloto. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

## ART 610 Seminar in Art Criticism

Fall or spring. 2 credits; may be repeated for credit. Four terms required for M.F.A.

## candidates.

Hours to be arranged. V. Kord. Historical and modern critical opinions and their relation to problems in the theory of art are studied.

## Studio Courses in Painting

## ART 121 Introductory Painting

Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
An introduction to the problems of artistic expression through the study of pictorial composition; proportion, space, shapes, and color as applied to abstract and representational design.

## ART 123 Landscape Painting

Summer. 3 credits.
Class meets outdoors at selected sites in the Ithaca area. A different motif is explored each week. Pen, pencil, and water- or oil-based colors (optional) are the materials employed. Analysis and discussion of the landscape work of Corot, Cezanne, van Gogh, Seurat, and others are included.

## ART 124 Painting and Drawing

Variable credit (maximum 5). Summer only A special summer abroad course with emphasis on artistic expression and techniques, for students at all levels of skill. Included will be a mixture of painting and drawing assignments, self-initiated projects, and drawing sessions with a live model.

## ART 221 Painting II

Fall or spring. 4 credits. Prerequisite: Art 121 or permission of instructor.

Hours to be arranged. Staff.
A continuation of Art 121.

## ART 321 Painting III

Fall. 4 credits. Prerequisite: Art 221 or permission of instructor.

Hours to be arranged. Staff. Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

## ART 322 Painting IV

Spring. 4 credits. Prerequisite: Art 321 or permission of instructor.

Hours to be arranged. Staff.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

## ART 421 Painting $V$

Fall. 6 credits. Prerequisite: Art 322 or permission of instructor.

Hours to be arranged. Staff. Further study of the art of painting through both assigned and independent projects executed in various media. Instruction
through group discussions and individual criticism.
ART 422 Senior Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 321 or 322 or permission of instructor.

Hours to be arranged. Staff. Advanced painting project to demonstrate creative ability and technical proficiency.

## ART 721-722, 821-822 Graduate

## Painting

721 and 821, fall; 722 and 822, spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in painting. Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they are to work. All members of the staff are available for individual consultation.

## Studio Courses in Graphic Arts

## ART 131 Introductory Intaglio

Fall, spring, or summer. 3 credits.
Hours to be arranged. E. Meyer. A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.
ART 132 Introductory Graphics
Fall, spring, or summer. 3 credits.
Hours to be arranged. S. Poleskie. An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochoir, and screen printing.
ART 133 Introductory Lithography
Fall, spring, or summer. 3 credits.
Hours to be arranged. G. Page.
The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

## ART 231 Intaglio Printing II

Fall or spring. 4 credits. Prerequisite: Art 131 or permission of instructor.

Hours to be arranged. E. Meyer.
Continuation of the study and practice of methods of intaglio printing, with emphasis on techniques and color.

## ART 232 Advanced Screen Printing (Book Arts)

Spring. 4 credits. Prerequisite: Art 132 and Art 161 or permission of instructor.

Hours to be arranged. S. Poleskie. Students will expand their knowledge of screen printing to include photo stencil and printing on diverse materials such as cloth and plastic with the goal of producing a book or a portfolio of prints by the end of the semester.

## ART 233 Lithography II

Fall or spring. 4 credits. Prerequisite: Art 133 or permission of instructor.

Hours to be arranged. G. Page.
Continuation of the study and practice of lithographic printing, with emphasis on color.

## ART 331 Printmaking IHI

Fall or spring. 4 credits. Prerequisite: Art 231, 232, or 233 or permission of instructor.

Hours to be arranged. Staff. Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332 Printmaking IV
Fall. 4 credits. Prerequisite: Art 331 or permission of instructor.

Hours to be arranged. Staff.
Continuation and expansion of Art 331.

## ART 431 Printmaking V

Spring. 6 credits. Prerequisites: Art 332 or permission of instructor.

Hours to be arranged. Staff. Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

## ART 432 Senior Thesis in Printmaking

Fall or spring. 6 credits. Prerequisite: Art 331 or 332 or permission of instructor.

Hours to be arranged. Staff.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

## ART 731-732, 831-832 Graduate Printmaking

731 and 831 , fall; 732 and 832, spring. Credit as assigned; may be repeated for credit. Limited to M.F.A. candidates in graphic arts. Prerequisite: permission of instructor. Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. Members of the staff are available for consultation; discussion sessions of work in progress are held.

## Studio Courses in Sculpture

ART 141 Introductory Sculpture
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff.
A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

## ART 141 Introductory Sculpture: Figurative Sculpture

## Summer. 3 credits.

Hours to be arranged. R. Berotia. This course will introduce students to the figure by working directly from observation. Students will learn the basics of modeling in clay, making plaster molds, and casting in plaster. Daily hands-on demonstrations and slide lectures will provide a historical overview. Open enrollment.
ART 141 Introductory Sculpture: Metal Fabrication and Bronze Casting

## Summer. 3 credits.

Hours to be arranged. G. S. White This course will introduce students to materials, techniques, and processes associated with metal fabrication and bronze casting. Through a series of assignments, students will explore the unique character of metals.

## ART 241 Sculpture II

Fall or spring. 4 credits. Prerequisites: Art 141 or permission of instructor.

Hours to be arranged. Staff. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program,
which is housed in its own building, contains a fully equipped bronze casting foundry.

## ART 341 Sculpture III

Fall. 4 credits. Prerequisite: Art 241 or permission of instructor.

Hours to be arranged. Staff.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

## ART 342 Sculpture IV

Spring. 4 credits. Prerequisite: Art 241 or permission of instructor.

Hours to be arranged. Staff.
Continuation and expansion of Art 341.
ART 441 Sculpture $V$
Fall. 6 credits. Prerequisite: Art 341, 342 or permission of instructor.

Hours to be arranged. Staff.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

## ART 442 Senior Thesis in Sculpture

Fall or spring. 6 credits. Prerequisite: Art 341 or 342 or permission of instructor.

Hours to be arranged. Staff. Advanced sculpture project to demonstrate creative ability and technical proficiency.

## ART 741-742, 841-842 Graduate Sculpture

741 and 841 , fall; 742 and 842 , spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in sculpture. Staff.
Students are responsible, under staff direction for planning their own projects and selecting the media in which they are to work. All members of the staff are available for individual consultation. Weekly discussion sessions of works in progress are held.

## Studio Courses in Photography

Darkroom fees for all photography courses
Fee for $\mathrm{B} \& \mathrm{~W}$ courses: $\$ 70.00$
Fee for color courses: $\$ 150.00$
Fee for an additional B \& W course taken the same term: $\$ 25.00$
Fee for an additional color course taken the same term: $\quad \$ 105.00$
Out-of-college students-\$10 per term course fee.

ART 161 Photography I (also Architecture 251)
Fall, spring, or summer. 3 credits Hours to be arranged. Staff.
A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

## [ART 166 Introduction to Photography

 for Non-MajorsNot offered 1994-95.]

## ART 167 Photography

Variable credit (maximum 5). Summer only. A special summer-abroad course with emphasis on both the techniques and aesthetics of black-and-white photography, for students at all levels of skill. Initial photographic assignments will be followed by other projects of the student's own choosing.

ART 168 Black-and-White Photography Summer. 3 credits.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

## ART 169 Color Photography

Summer. 3 credits.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

## ART 261 Photography II (also

 Architecture 351)Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor.

Hours to be arranged. Staff. A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

## ART 263 Color Photography

FalI, spring, or summer. 4 credits. Prerequisites: Art 161 or permission of instructor.

Hours to be arranged. Staff. A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

## ART 264 Photo Processes

Fall or spring. 4 credits. Prerequisite: Art 161 or permission of instructor.

Hours to be arranged. Staff. A studio course in alternate and nonsilver photographic, processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

## ART 265 Studio Photography

Fall or spring. 4 credits. Prerequisite: Art 161 or permission of instructor.

Hours to be arranged. Staff. A course in the use of medium- and largeformat cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

## [ART 361 Photography III

Fall, spring, or summer. 4 credits. Prerequisite: Art 161, 261, or permission of instructor. Not offered 1993-94.

Hours to be arranged. Staff. Continued study of creative use of photography, with emphasis on specialized individual projects.]

## [ART 362 Photography IV

Fall, spring, or summer. 4 credits. Prerequisite: Art 161, 261 or permission of instructor. Not offered 1994-95.

Hours to be arranged. Staff. Continued study of creative use of photography, with emphasis on specialized individual projects.]

## ART 379 Independent Studio

Summer. Credit by arrangement.
Hours by arrangement. Staff. Students who have the interest and ability to progress beyond the problems of their particular course may register for additional credits. Students plan courses of study or projects that must meet the approval of the instructors they have selected to guide their progress and criticize the results. A course fee may be charged.

ART 461 Photography V
Fall. 6 credits. Prerequisite: Art 361 or permission of instructor.

Hours to be arranged. Staff. A studio course intended for photography majors and other qualified students.

ART 462 Senior Thesis in Photography Fall or spring. 6 credits. Prerequisite: Art 461 or permission of instructor.

Hours to be arranged. Staff. A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

## ART 751-752, 851-852 Graduate Photography

751 and 851 , fall; 752 and 852 , spring. Credit as assigned. May be repeated for credit. Limited to M.F.A. students in photography. Prerequisite: permission of instructor. Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. Members of the staff are available for consultation. Discussion sessions of work in progress are held.

## Studio Courses in Drawing

ART 151 Drawing I
Fall, spring, or summer. 3 credits.
Hours to be arranged. Staff. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

## ART 152 (251) Drawing II

Fall or spring. 3 credits. Prerequisite: Art 151.

Hours to be arranged. Staff. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of Art 151 concentrating on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

## ART 158 Conceptual Drawing

Summer. 3 credits.
Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

## ART 159 Life and Still-Life Drawing

Summer. 3 credits.
The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 (351) Drawing III
Fall or spring. 3 credits. Prerequisites: Art 152.

Hours to be arranged. Staff. An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV
Fall or spring. 3 credits. Prerequisites: Art 251.

Hours to be arranged. Staff. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

## ART 352 Anatomy for Artists

Spring. 3 credits. Prerequisites: Art 151, 159, and 251 or permission of instructor.

Hours to be arranged. S. Taft.
Develops basic understanding of the structure of the human figure as it is relevant to artists through an in-depth study of the skeleton and muscle-tendon system. Focuses on improving understanding and skill in design and observation, as well as gaining an understanding of how the materials may be relevant to making art through the study of works by the masters.

## Graduate Thesis

ART 712 Graduate Thesis
Spring. Credit as assigned.
Staff.
For graduate students in their last term in the programs in painting, sculpture, printmaking, and photography.

## Special Studio Courses

## ART 171 Computer Art I

[Fall], spring, or summer. 3 credits. Hours to be arranged. S. Bowman. A studio course in the use of the computer as a tool for making art. Introduction to microcomputers and various graphic programs, image grabbing, and 2-d animation.

## ART 172 Computer Art II

Fall, spring, or summer. Prerequisite: Art 171 or permission of instructor.

Hours to be arranged. S. Bowman. A continuation of Art 171, with introduction to graphics programs in multimedia, on Macintosh II systems. Emphasis is on combining graphics, grabbed imagery, with 2d and 3 d animation and sound, with output to video.

## ART 372 Special Topics in Art Studio

 Fall, spring, or summer. Variable credit.Hours to be arranged. Staff.
An exploration of a particular theme or project.

## ART 400 Rome Studio

Fall or spring. 4 credits. Prerequisite: permission of instructor. Staff.
The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor.

## ART 472-476 Independent Studio

Fall, spring, or summer. Variable credit (maximum, 4). Students may register for two studios in a semester. May be repeated for credit. Prerequisite: written permission of instructor.

Department staff.
ART 472 Independent Studio - Painting

ART 473 Independent Studio - Graphics, Lithography, Intaglio
ART 474 Independent Studio - Sculpture
ART 475 Independent Studio - Drawing
ART 476 Independent Studio Photography

## ART 481 Pre-Thesis/Multi Media

Fall or spring. 6 credits. Prerequisite: permission of instructor.

Hours to be arranged. Staff.
Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department.

## ART 482 Senior Thesis/Multi Media

Fall or spring. 6 credits. Prerequisite: 481 or permission of instructor.

Hours to be arranged. Staff. Students are responsible, under staff direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department.

## CITY AND REGIONAL PLANNING

R. S. Booth, chair; S. Baugher, L. Beneria, S. Christopherson, P. Clavel, J. Cody, S. Czamanski (emeritus), M. Drennan, J. F. Forester, W. W. Goldsmith, W. Isard, B. G. Jones, B. Kelly (emeritus), D. Lewis, P. Olpadwala, K. C. Parsons, J. W. Reps (emeritus), S. Saltzman, S. W. Stein (emeritus), M. A. Tomlan, R. T. Trancik, T. Vietorisz (visiting), M. Wilder
The department offers several programs of study at both the undergraduate and graduate levels.

## The Undergraduate Program in Urban and Regional Studies

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students graduating from the program receive a Bachelor of Science degree. The program is intended to provide both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program are designed to provide students a broad understanding of relevant issues, ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary, requiring students to confront urban and regional problems from a variety of perspectives and through the analytic tools of different disciplines.

## Basic Degree Requirements (Applicable through the Class of 1995)

1) General education (during the first four terms)
a. Freshman writing seminars: 6 credits
b. Foreign language: qualification in one foreign language
c. An approved course sequence (minimum of 6 credits) in each of the five categories below: 30 credits
1. a. Biological sciences or
b. Physical sciences
2. a. Social sciences (other than economics) or
b. History
3. a. Humanities or
b. Expressive arts or design arts
4. Mathematics
5. Economics
2) Major concentration: 50 to 52 credits
a. Specific course requirements ( 38 to 40 credits)

CRP 100, The American City
CRP 101, The Global City
CRP 314, Planning, Power, and Decision Making, or Government 311, Urban Politics
CRP 315, The Progressive City
CRP 320, Introduction to Statistical Reasoning for Urban and Regional Analysis
CRP 321, Introduction to Quantitative Methods for the Analysis of Public Policy
CRP 361, Seminar in American Urban History, or History 332 or 334, The Urbanization of American Society
CRP 400, Introduction to Urban and Regional Theory
CRP 401, Urban Political Economy
CRP 480, Environmental Politics
CRP 481, Principles of Spatial Design and Aesthetics
CRP 482, Urban Land Use Concepts
b. Directed electives (related to urban and regional studies): 12 credits (at least 6 credits to be taken outside CRP)
3) Free electives: 26 to 28 credits
a. 12 credits during first four terms
b. 14 to 16 credits during last four terms

Required courses for graduation: 34
Required Credits: 120
The university requirement of two terms of physical education must be met during the first two terms.

Basic Degree Requirements (beginning with students in the Class of 1996 and thereafter) URS students who enter after the fall 1992 semester have to complete the following requirements for graduation:
Requirements for Graduation: URS requirements include (1) eight semesters of residence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1) General education
a. Freshman writing seminars: 2 courses
b. Foreign language: 3 courses or qualification in one foreign language
c. Distribution Requirements: 9 courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must utilize the College of Arts and Sciences designation of specific courses that may be taken to meet the requirements for groups 1-4.
Group 1: Physical and biological sciences ( $2-3$ courses required)
Group 2: Quantitative and formal reasoning (1-2 courses required)
Group 3: Social sciences and history (2-3 courses required)
Group 4: Humanities and the arts (2-3 courses required)

## Advanced Placement Credit

Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, provided that they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward satisfaction of the distribution requirement in Groups 3 and 4. Grades of S-U courses applied to distribution requirements are acceptable.
2. Required Courses for Major: 5 courses

CRP 100: The American City
CRP 101: The Global City: People, Production, and Planning in the Third World
CRP 320: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)
Micro Economics course (at least 3 credits, from approved list)
Architecture course (at least 3 credits, from approved list)

## Approved List of Micro Economics and

 Architecture CoursesMicro Economics:
CE\&H 110: Introductory Micro Economics
CE\&H 210: Intermediate Micro Economics
ECON 101: Introduction to Micro Economics
ECON 203: Micro Economics
ECON 313: Intermediate Micro Economics
Architecture:
ARCH 131: An Introduction to Architecture I
ARCH 132: An Introduction to Architecture II
ARCH 181: History of Architecture I
ARCH 182: History of Architecture II
3. Area Requirements for Major: 11 courses
A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis

## a. Design

CRP 415: Gender Issues in Planning and Architecture
CRP 481: Principles of Spatial Design and Aesthetics

CRP 482: Urban Land Use Concepts
b. Economics

CRP 218: Economics of Gender
CRP 400: Introduction to Urban and Regional Theory
CRP 401: Seminar in Urban Political Economy
CRP 404: Urban Economics
CRP 417: Industrial Restructuring;
Implications for State and Local Policy
NOTE: This requirement may not be satisfied with the same course taken to complete the micro-economics course requirement under $B$.
c. Environment

CRP 387: Urbanization and the Environment
CRP 451: Environmental Law
CRP 480: Environmental Politics
d. History

CRP 261: Urban Archaeology
CRP 360: Pre-Industrial Cities and Towns of North America
CRP 361: Seminar in American Urban History
CRP 461: Methods of Archival Research
CRP 462: The American Planning Tradition
e. Politics/Policy

CRP 314: Planning, Power, and Decision Making
CRP 315: The Progressive City
CRP 363: American Indians, Planners, and Public Policy
CRP 382: Urban Housing: Sheltered vs. Unsheltered Society
CRP 413: Planning and Political Economy I
CRP 414: Planning and Political Economy II
CRP 448: Social Policy and Social Welfare
f. Quantitative Analysis

CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy
CRP 421: Introduction to Computers in Planning
A. Students must take any additional 5 CRP courses (of at least 3 credits each)
4. Free Electives: 6-9 courses
5. Physical Education (2 terms of PE)

Required courses for graduation: 34
Required credits: 120

## Honors Program

Each year a small number of well-qualified junior-year students will be accepted into the honors program. Each honors student will develop and write a thesis under the guidance of his or her faculty adviser. There will be a seventy-five-page limit on each honors thesis.

## Off-Campus Opportunitles

Cornell-in-Washington Program. Students in good standing may be eligible to earn degree credits in the Comell-in-Washington program through course work and an urbanoriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. All seminars are taught by Cornell faculty members and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements.
Cornell Abroad. Cornell encourages qualified undergraduates to study abroad in the belief that exposure to foreign cultures is an important component of a good education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. With this in mind, the university is continuing to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. The department encourages its students to explore these opportunities.
Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenthcentury Palazzo Massimo. Students in good standing are eligible to eam degree credits through course work undertaken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.
Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

## Additional Degree Options

Linked degree options. Urban and regional studies students have the opportunity to earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. This arrangement shortens that time by about one year. A minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Students apply to the Graduate School, usually in the senior year.
Dual degree option. A student in the Comell College of Arts and Sciences currently can eam both a B.A. in an arts college major, plus a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program.

Comell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

## Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment-a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

## Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. A high school student who has completed graduation requirements at midyear and is taking college courses for the rest of the academic year should apply as a freshman. Prospective candidates who believe that their circumstances are exceptional should consult with the director of admissions in the Comell division of interest to them before filing an application.
Forms for transfer application and financial aid are available from the Comell University
Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.
It is desirable for prospective transfers to have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Those applicants whose previous course work closely parallels the general education portion of the urban and regional studies curriculum will have relative ease in transfer. However, as there are no specific requirements for transfer, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.
Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding urban and regional studies may contact Professor Richard S. Booth, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853-6701 (telephone: 607-255-4613).

## The Graduate Program in City and Regional Planning

The major concentrations of course work in city and regional planning are in the following areas:
Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.
Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.
Local and regional economic development is concerned with understanding and influencing how economic change may be hamessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.
International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.
Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.
Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), for a two-year program; the Master of Arts (M.A.) in historic preservation planning, for a two-year program; and, in special cases, the Master of Professional Studies (International Development) [M.P.S.(I.D.)], for the twelve-month international planning program.

## Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

## Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.
The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

## Undergraduate Program in Urban and Regional Studies

CRP 100 The American City
Fall. 3 credits.
Staff.
An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth
century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

## CRP 101 The Qlobal City: People, Production, and Planning In the Third World

Spring. 3 credits.
P. Olpadwala

A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

## [CRP 108 FWS: Environment and Soclety:

 The Delicate BalanceFall. 3 credits. Not offered 1994-95. Staff.
This freshman writing seminar addresses the delicate balance that must be maintained between societal needs and demands and environmental quality. It uses several important texts that examine and challenge society's widespread and deep-rooted tendencies to ignore the social, economic, and environmental consequences of degrading the natural environment. Students work
extensively on improving writing skills.]

## [CRP 109 FWS: In Search of American

 CltiesSpring. 3 credits. Not offered 1994-95. Staff.
An unusual course structure is used to give students broad exposure to ongoing changes in the social, political, economic, and physical character of U.S. cities. Each week students will "visit" a different city by way of readings, oral presentations, discussions, and brief papers that touch on major aspects of the city's economic, social, and political history; the city's physical character and regional context; and recent planning or policy issues.]

## CRP 261 Urban Archaeology (also LA

 261)Fall. 3 credits
S. Baugher

Urban archaeologists study both urban development and the pre-urban past that lies within the present boundaries of cities. Thus not all archaeology in a city is of a city. While several centuries of urban development are often found at the upper level of archaeological sites, lower horizons often reveal cultural diversity. This course will examine the methods and unique political and economic problems associated with excavating in urban environments while exploring the commercial, industrial, residential, and transportationrelated sites found in modern cities. An introductory course, designed for undergraduates.

## CRP 271 Introduction to African Development (also ASRC 271)

Fall or spring. 3 credits.
Staff.
A survey of development problems in SubSaharan Africa, including the importance of the natural resource base, the policy and institutional factors affecting development, and the human resource potential in the continent.

## CRP 314 Planning, Power, and Deciaion

 MakingFall. 3 credits
J. Forester.

This seminar examines various bases of political and professional power. We ask, What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

## CRP 315 The Progressive City

Spring. 3 credits
P. Clavel

A review of attempts to incorporate the interest of working-class and poor constituencies through majority control of local governments. Topics to be covered include the role of the city in class formation; historical perspectives on urban political administration; contemporary populist, socialist, and progressive urban governments and the search for an economic basis for progressive reforms.
CRP 320 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits.
S. Saltzman.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical and related computer methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions. This course will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

## CRP 321 Introduction to Quantitative Methods for the Analysis of Public

 PolicySpring. 3 credits
M. Drennan.

An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course will focus on various types of models commonly used to analyze urban and regional policy, including techniques for decision analysis, linear programming, cost-benefit analysis, simulation, and regression models, among others. Strengths and weaknesses of those methods will also be considered

CRP 360 Pre-Industrial Cities and Towns of North America (also CRP 666, LA 360, and LA 666)
Spring. 3 credits. S-U grades optional S. Baugher

The pre-industrial approaches to the founding, design, and development of towns and cities in North America until 1815 demonstrate how various American Indian civilizations as well as diverse European cultures have each brought their perspectives to the organization of town and city living. American Indian case studies will include Mayan and Aztec cities, the city of Cahokia, and the towns of the Pueblos, Creeks, and Iroquois. The experiences of Europeans in North America will include Spanish, French, Dutch, and English. This course is a recommended complement to CRP 361

## CRP 361 Seminar in American Urban History (also CRP 662)

Spring. 3 credits. Prerequisite: permission of instructor

Staff.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city

CRP 363 American Indians, Planners, and Public Policy (also CRP 547 and LA 363)
Spring. 3 credits. S-U grades optional. S. Baugher.

Contemporary American Indian people, their reservations, and their cultural heritages are all affected, often adversely, by decisions made by public agencies and private enterprise. To benefit non-Indian cities and economic growth, reservations are sometimes flooded, polluted, strip-mined, and deforested. Archaeological sites and burial grounds are often destroyed. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

CRP 382 Ußan Housing: Sheltered vs. Unsheltered Society (also CRP 582)
Fall. 4 credits.
Staff
Homelessness is the latest in a continuing list of terms to describe unmet housing needs. To understand how and why such needs persist, even in good economic times, one must examine the nature of interactions between housing policies and housing market forces. This course examines the complex interaction of public and private actions in the development and redevelopment of urban housing. More specifically, the course seeks to investigate the many ways in which private and public policy decisions determine which groups in society will have access to housing. This course is appropriate for students with an interest in urban housing and a background in any of the following areas: urban economics, urban sociology, anthropology, history, or geography. The course will consist of lectures, a wide variety of readings, and guest speakers. Students will be evaluated on the basis of class discussions, two exams, a 15-20 page paper, and an oral presentation

## CRP 400 Introduction to Urban and Regional Theory

Fall. 4 credits. Open to juniors and seniors B. G. Jones.

Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

## CRP 401 Seminar in Urban Political Economy

Spring. 4 credits. Prerequisites: introductory economics or sociology; for URS students, CRP 400 also.
W. W. Goldsmith

The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read
and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

## CRP 404 Urban Economics (also CRP 604)

Fall or spring. 4 credits. Prerequisite: basic economics.

Staff
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

## [CRP 415 Gender Issues in Planning and

 ArchitectureSpring. 3 or 4 credits. Not offered 1994-95.]
[CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Fall. 4 credits. Not offered 1994-95 S. Christopherson.

A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.]
CRP 421 Introduction to Computers in Planning (also CRP 522)
Fall. 4 credits.
Staff.
Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase and MacGIS are examples of packages that have been taught in previous years.)
CRP 442 The Sociology of Science (also Biology and Society 442)
Fall. 4 credits.
T. J. Pinch.

A view of science less as an autonomous activity than as a social institution. We will discuss such issues as controversies in science, textual analysis, gender and the social shaping of scientific knowledge

## [CRP 448 Social Policy and Social Welfare (also CRP 548) <br> Spring. 4 credits. Not offered 1994-95.]

## [CRP 451 Environmental Law (also CRP 551)

Fall. 4 credits. Not offered 1994-95. Staff.
An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture,
landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.]

CRP 457 Community Service Fieldwork
Fall or spring. 4 credits variable. Permission is granted by instructor.

Faculty.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.
[CRP 461 Methods of Archival Research Fall. 3 credits. Not offered 1994-95.]

## CRP 480 Environmental Politics

Spring. 4 credits
R. S. Booth.

Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 481 Principles of Spatial Design and Aesthetics (also CRP 581 and Landscape Architecture 480)
Fall. 3 credits. Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor.
R. T. Trancik.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America

## CRP 482 Urban Land Use Concepts

## Fall. 3 credits

## T. Cameron

Explorations of the use of land in urban areas, with an emphasis on the experience of North American cities. The course reviews use types, use characteristics, and use relationships in terms of conflicting social and economic demands. Concepts of organizing urban space in the past and present are reviewed. Physical planning, site planning and urban design issues are discussed.

CRP 490 Student-Faculty Research
Fall or spring. $1-4$ credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only.

Hours to be arranged. Staff.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

## CRP 492 Honors Thesis Research

Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty.

Hours to be arranged. Staff.
Each selected student works with his or her thesis adviser.

## CRP 493 Honors Thesis Writing

Fall or spring. 4 credits. Prerequisite: Completion of CRP 492.

Hours to be arranged. Staff.
Each selected student works with his or her thesis adviser.

## CRP 495 Special Topics

Fall, spring, summer. 4 credits. Hours to be arranged.

Staff.

## [CRP 495.16 History of China in Modern Times (also HIST 294)

Spring. 3 credits. Not offered 1994-95. Staff.
Introductory course that has no prerequisites and assumes no prior knowledge of Chinese history. Its requirements include the writing of two short papers and taking two 50 -minute examinations (one at midsemester and one during final examination period).]

## CRP 497 Supervised Readings

Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Staff.

## Graduate Courses and Seminars

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499 (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.

CRP 500 Urban and Regional Theory Spring. 3 credits.

## W. W. Goldsmith.

A review of attempts by the various social sciences to understand the contemporary city and its problems, particularly as seen by planners. Material is drawn from urban and regional economics, human ecology, urban sociology, psychology, anthropology, and geography in order to explain the location, size, form, and functioning of cities. Traditional and contemporary critical theory is examined as it applies to physical, social, and economic problems of the modern city. Major texts will be read, criticized, and discussed in seminars.

## CRP 511 Concepts and Issues in

 Planning Practice
## Fall. 3 credits

P. Clavel.

A seminar for graduate students and others interested in an in-depth introduction to the main ideas and concepts that underlie the practice of city and regional planning. Weekly discussions will focus on selected articles and books. Interrelations between national, state, and local practices and policies, and developments in methodology, organization, and the political environment, will be explored.

## CRP 512 Public and Spatial Economics for Planners

Fall. 3 credits. Letter grade. No prior
knowledge of economics.
Staff.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning, and the perspective of the public and nonprofit sectors is the perspective of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics.

The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.
[CRP 515 Gender Issues in Planning and Architecture (also CRP 415)
Spring. 3 or 4 credits. Offered alternate years. Not offered 1994-95
S. Christopherson.]
[CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits. Not offered 1994-95.
S. Christopherson.

A basic introduction to new issues arising from the ways in which national and international economic shifts are affecting diverse United States localities. The course will focus on intraindustry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other locations in the Northeast.]

## CRP 520 Statistical and Mathematical Concepts for Planning

Fall. 3 or 4 credits. Staff.
An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package

CRP 521 Mathematical Foundation for Planning Analysis.
Fall. 1 credit. S-U only. Meets for two hours, once each week, for approximately half the semester

## Staff.

Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 522 Introduction to Computers in Planning (also CRP 421)
Fall. 4 credits.
Staff.
Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase, and MacGIS are examples of packages that have been taught in previous years.)
CRP 532 Real Estate Development Process
Fall. 3 credits. Staff.
Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

## CRP 541 The Politics of Technical Decisions I (also Government 628 and Biology and Society 415) <br> Spring. 4 credits. Cosponsored by the

 Program on Science, Technology, and Society.Staff.
Political aspects of decision making in technical areas. Examines the origins and characteristics of "technical politics," the role of experts in government, and the problem of expertise in a democratic system. Alternatives to current decision-making procedures are explored. Explores the politics of artifacts and cultures as well as govemment.

## CRP 545 Introduction to Public Policy

 Analysis and Management Spring. 3 credits. Prerequisite: CRP 520 or equivalent.M. Drennan.

Introduction to systematic methods and processes for analyzing issues and problems of public policy and management. Roles of economic analysis and of analytic techniques in public sector decision making will be reviewed and their respective strengths and weaknesses evaluated. Applications to a variety of public sector problem areas will be explored.

## CRP 546 Conflict Resolution in Community and Environment

Fall. 3 credits.
J. Forester

This course will explore the theories and techniques of conflict resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363)
Spring. 3 credits. S-U grades optional. S. Baugher.

Contemporary American Indian people, their reservations, and their cultural heritages are all affected, often adversely, by decisions made by public agencies and private enterprise. To benefit non-Indian cities and economic growth, reservations are sometimes flooded, polluted, strip-mined, and deforested. Archaeological sites and burial grounds are often destroyed. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

## [CRP 548 Social Policy and Social Welfare (also CRP 448) <br> Spring. 4 credits. Not offered 1994-95.]

CRP 549 Ethics and Practical Judgment in Planning
Spring. 4 credits variable.
J. Forester.

An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

## CRP 550 Built Environment

Spring. 3 credits.
Staff.
This course is intended to introduce graduatelevel students to the study of the built environment. This course will include: 1) theoretical approaches to the study of the built environment; 2) an introductory survey of the literature on built environment "elements," such as streets, grids, houses; 3) consideration of methods used to understand how people affect and are affected by their immediate environment; and 4) special topics, particularly, historic landscapes and
historic preservation. This course will emphasize examples from the United States but some international comparisons will be drawn.

## [CRP 551 Environmental Law (also CRP 451)

Fall. 4 credits. Not offered 1994-95. Staff.
An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statues and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, govemment, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.]
CRP 552 Urban Land-Use Planning I Fall. 3 credits.

Staff.
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.

Staff.
In-depth consideration of special issues in urban land-use planning, such as industrial districts, large-scale integrated development, Planned Unit Development, public and institutional facilities, open space, land banking, central business districts, neighborhoods, energy impacts, transportation impacts, and others.

## CRP 555 Urban Systems Studio (also

 Landscape Architecture 602)Spring. 6 credits. Prerequisite: permission of instructor.

Staff.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. This is a specially arranged collaborative studio with the Landscape Architecture Program.

## CRP 556 Built-Environment Education Workshop

Spring. 4 credits.

## M. Tomlan.

Interdisciplinary teams of students from planning, architecture, landscape architecture, historic preservation, and other environmental design disciplines work in classrooms with schoolchildren and teachers to deepen their understanding of the built environment and to encourage their participation in the shaping of their own environment. Work in local schools is emphasized.

CRP 558 City and Regional Planning Workshop
Fall and spring. 4 credits. S-U only. Staff.
Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work inclividually or in teams.

## CRP 560 Documentation for Preservation (also Architecture 586)

Fall or spring. 3 credits.

## M. A. Tomlan.

Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

## CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 588)

Fall or spring. 4 credits.
Staff.
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

## CRP 562 Perspectives on Preservation (also Architecture 585)

Fall. 3 credits. Staff.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

## CRP 563 Problems in Contemporary Preservation Practice (also Architecture 584) <br> Spring. Variable credit.

 Staff.A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed.
Presented by staff and guest lecturers.

## CRP 564 Building Materials Conservation (also Architecture 587)

Spring. 3 credits. Open to juniors, seniors, and graduate students.
M. A. Tomlan.

A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be

## taken to conserve them.

## CRP 565 Fieldwork or Workshop in History and Preservation

Fall or spring. Variable credit.
M. A. Tomlan.

Work on applied problems in history and preservation planning in a field or laboratory setting or both.

## CRP 567 Measured Drawing (also

 Architecture 583)Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor.
M. A. Tomlan.

Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

## CRP 569 Archaeology in Historic Preservation Planning (also LA 569)

Fall. 3 credits.
S. Baugher.

Increasingly mandated by federal, state, and local legislation, archaeology plays an important role in planning and land-use decisions. Today, archaeology is integrated with the regulatory processes in historic preservation and environmental review, as well as continuing to influence the design and interpretation of national parks, historic battlefields and historic landmarks. Archaeological research reveals significant insights from the past regarding issues such as public landfill, waste disposal, soil erosion, water quality, and environmental change. Case studies from the United States, Canada, Great Britain, Italy, and Mexico highlight these issues. A graduate level seminar open to upper-level undergraduates.
[CRP 574 Legal Aspects of International Planning
Fall. 3 credits. Offered alternate years. Not offered 1994-95.

> Staff.

Legal systems vary substantially around the world. Planners operate within the parameters established by the legal system of the nation in which they are working. This course allows each student to examine the legal structure of a particular nation (chosen by the student) and to explore how that country's legal system shapes/controls decisions regarding the use, management, and development of land resources. The course emphasizes written and oral presentations.]

## CRP 581 Principles of Spatial Design and

 Aesthetics (also CRP 481 and Landscape Architecture 480)Fall. 3 credits. Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor.
R. T. Trancik.

A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

## CRP 582 Urban Housing: Sheltered vs. Unsheltered Society (also CRP 382)

## Fall. 4 credits.

## Staff.

Homelessness is the latest in a continuing list of terms to describe unmet housing needs. To understand how and why such needs persist, even in good economic times, one must examine the nature of interactions between housing policies and housing market forces. This course examines the complex interaction of public and private actions in the development and redevelopment of urban housing. More specifically, the course seeks to investigate the many ways in which private and public policy decisions determine which groups in society will have access to housing.

This course is appropriate for students with an interest in urban housing and a background in any of the following areas: urban economics, urban sociology, anthropology, history, or geography. The course will consist of lectures, a wide variety of readings, and guest speakers. Students will be evaluated on the basis of class discussions, two exams, a 15-20 page paper, and an oral presentation.

## CRP 604 Urban Economics (also CRP 404)

Fall or spring. 4 credits. Prerequisite: basic economics.

Staff.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.
CRP 613 The Political Economy of Gender and Work (also Women's Studies 613)
Fall. 3 credits.
L. Beneria.

This course focuses on different approaches to the analysis of gender and work, combining economic and feminist theory. Topics include: gender, economic rationality and the rhetoric of economics; household theory; gender and the labor market; wage differentials; discrimination, and labor market policies; gender and technology; economic restructuring and women's work; gender and demographic change; issues in reproductive technologies. The empirical material in the course concentrates mostly, but not exclusively, on the United States.

## CRP 615 The Politics of Planning

 Spring. 4 credits.P. Clavel.

This graduate-level seminar explores the relationship between the persons who do planning and the community, political, and social movement context for planning. A range of political models is addressed, and literature in politics, sociology, and organizational theory is part of the coverage. Methodology of field research is part of the course, and students will be encouraged to design research that puts them in touch with actual cases, persons, and recent local histories.

## CRP 616 Development and Change in the World Economy

Spring. 3 credits. Letter grade only.
L. Beneria.

This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibilization, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 620 Planning Analysis
Spring. 4 credits.
B. G. Jones.

A survey of commonly used techniques for analyzing various aspects of subnational socioeconomic systems. Emphasizes planning applications

## CRP 630 Local Economic Development Policy-Seminar

Spring. 4 credits.
Staff
This course examines the impacts of urban economic restructuring on employment and income opportunities in U.S. cities. Particular attention is focused on the ways in which these effects vary by race and gender. Urban policy responses are evaluated in light of the changing economic, demographic, and political character of U.S. metropolitan areas Alternative policy strategies are examined which seek to redistribute economic resources. Course requirements include a midterm exam, a case study report, and an oral presentation.

## CRP 631 Local Economic Policy-Field Workshop <br> Fall or spring. 4 credits.

P. Clavel.

A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

## CRP 635 Workshop: State Economic

 Development StrategiesFall or spring. 4 credits. S-U grades optional. Staff.
The purpose of this course/workshop is twofold: 1) to provide students with research tools useful in developing state-level economic development strategies; and 2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm specific subsidies. The course will consist of lecture and discussion meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

## CRP 642 Critical Theory and the Micro.

 politics of PracticeSpring. 4 credits variable.
J. Forester.

Trying to "solve problems," planners and policy analysts set agendas, shape participation, negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation productive and reproductive aspects of ordinary speech and action

## CRP 653 Legal Aspects of Land-Use

 PlanningFall. 3 credits
R. Booth.

Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

## CRP 659.02 Special Topic: Urban Public

 FinanceSpring. 3 credits. Prerequisite: prior exposure to microeconomics
M. Drennan.

An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

## CRP 661 Historic Preservation Planning Workshop: Plans and Programs

 Fall or spring. $1-4$ credits. Prerequisite: CRP 561Staff
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

## CRP 662 Seminar in American Urban History (also CRP 361)

Spring. 3 credits. Prerequisite: permission of instructor.

Staff.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, urban reform movement, and intellectual and social responses to the city
[CRP 663 Historic Preservation Law Spring. 3 credits. Offered alternate years. Not offered 1994-95.

Staff.
Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.]

## CRP 664 Economics and Financing of Neighborhood Conservation and Preservation

Fall. 3 credits.
B. G. Jones.

The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

## CRP 665 Preservation Planning and

 Urban ChangeFall. 3 credits.
M. A. Tomlan.

An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

## CRP 666 Pre-Industrial Cities and Towns of North American (also CRP 360)

Spring. 3 credits. S-U grades optional S. Baugher.

The pre-industrial approaches to the founding, design, and development of towns and cities in North America until 1815 demonstrate how various American Indian civilizations as well as diverse European cultures have each
brought their perspectives to the organization of town and city living. American Indian case studies will include Mayan and Aztec cities, the city of Cahokia, and the towns of the Pueblos, Creeks, and Iroquois. The experiences of Europeans in North America will include Spanish, French, Dutch, and English. This course is a recommended complement to CRP 361

CRP 670 Regional Planning and Development in Developing Nations Spring. 4 credits. Prerequisite: second-year graduate standing.
W. W. Goldsmith

Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only
W. W. Goldsmith

The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

## CRP 673 Economics of Regional Development

Fall or spring. 2 or 4 credits.
Staff.
This course deals with the historical process of regional and metropolitan development, emphasizing Third World problems. While its basic approach is mode-of-production analysis, it also critically surveys location, comparative advantage, and feedback system theories. Development is interpreted as the penetration of the capitalist mode of produc tion into precapitalist societies. Its features are analyzed both in terms of the historical stages of expanding capitalism (mercantile phase, imperialism, multinationals) and in terms of the pre-existing (feudal, Asiatic) precapitalist mode of production. Regional and urban development planning problems are discussed in the light of the contradictions of the above process, as well as in the context of newly emerging Third World socialist countries

## CRP 675 Seminar in Project Planning in Developing Countries

Spring. 4 credits
D. Lewis

An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

## CRP 689.08 Special Topics: Environmental Aspects of International Planning

Fall. 3 credits. S-U option.
P. Olpadwala.

What are the major environmental problems of the world today? How may we categorize them? What are their technological and social roots? Who is affected by them? What are the relative roles of rich and poor countries, and rich and poor peoples within countries, in creating the crises (to what extent are these problems of poverty and deprivation? of abundance and overconsumption?)? What is done to combat them and how effective is it/ can it be? What are the possibilities for/limits of national planning? international cooperation?

## CRP 703 Contemporary Theories of

 Regional DevelopmentFall or spring. 4 credits.
W. W. Goldsmith.

An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

## CRP 711 Planning and Organization

 TheoryFall. 4 credits.
P. Clavel.

Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

## CRP 720 Quantitative Techniques for Policy Analysis and Program Management

Fall. 4 credits.
D. Lewis.

Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

## CRP 730 Methods of Regional Science and Planning I

Fall or spring. 4 credits variable.
S. Saltzman.

An introduction to some of the major methods and models used in regional science and planning. This course is half of a twosemester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. The spring semester emphasizes statistical and econometric models.

CRP 731 Methods of Regional Science and Planning II
Fall or spring. 4 credits.
S. Saltzman.

See CRP 730. The fall semester will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.
CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature.
S. Saltzman.

A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

## CRP 777 Theories of Development and Underdevelopment

Spring. 3 credits.
P. Olpadwala.

Various theories attempting to analyze and explain the phenomena of underdevelopment are examined. Although a range of thought and approaches is considered, the accent is on aspects of political economy revolving around concepts of class and exploitation. Topics include the transition to capitalism; dependent and uneven development; various issues of growth and fluctuation under contemporary capitalism, including crises; rural and industrial development in lessdeveloped countries and planning for development.

## CRP 790 Professional Planning Colloquium : <br> Fall. 1 credit.

Staff.
Visiting lecturers treat problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

## CRP 792 Master's Thesis, Project, or

 Research PaperFall or spring. 10 credits variable. $\mathrm{S}-\mathrm{U}$ grades optional.

Hours to be arranged. Staff.

## CRP 794 Planning Internships

Fall, spring, or summer. 1-12 credits.
Hours to be arranged. Staff.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal. urban, and regional policy from the perspective of planning practice.
CRP 795 Master's Thesis in Preservation Planning
Fall or spring. $1-6$ credits.
Hours to be arranged. Staff.
CRP 796 Colloqui Journal Publication Workshop
Fall or spring. 2 credits. S-U grades only. P. Clavel, J. Forester.

Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 variable credits. Limited to graduate students. Prerequisites: permission of instructor.

Staff.
CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit.
Staff.
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations.
Typically, the colloquium will meet once a
week during the semester.

## CRP 800 Advanced Seminar in Urban and

 Regional Theory IFall. 3 credits. Prerequisite: CRP 500. B. G. Jones.

The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intraurban distribution of population and economic activity are reviewed.
CRP 801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits. Prerequisite: CRP 800. B. G. Jones.

A continuation of City and Regional Planning 800. concentrating on recent developments.

CRP 810 Advanced Planning Theory Fall. 3 credits. Prerequisite: CRP 500 or 710 . B. G. Jones.

A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830 Seminar in Regional Sciences, Planning, and Policy Analysis
Fall or spring. Variable- 4 credits. S. Saltzman or W. Isard.

This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

## CRP 890 Planning Research Seminar I

Fall or spring. 2 credits. Staff.
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

## CRP 892 Doctoral Dissertation

Fall or spring. 1-2 credits.
Hours to be arranged. Staff.
Special Topic Courses
Fall or spring. Variable credit.
Hours to be arranged. Staff.
Typical topics are:
CRP 609 Urban and Regional Theory
CRP 619 Planning Theory and Politics

## CRP 629 Quantitative Methods and Analysis

CRP 639 Regional Development Planning
CRP 649 Social-Policy Planning
CRP 659 Urban Development Planning
CRP 669 History and Preservation
CRP 679 Planning and Developing Regions

CRP 689 Environmental Planning
CRP 699 Regional Science
CRP 719 Planning Theory and Politics

## LANDSCAPE ARCHITECTURE

The Landscape Architecture Program at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

## The Program

Program faculty: M. I. Adleman, S. Baugher, H. Gottfried, P. Horrigan, T. H. Johnson, D. W. Krall, L. Mirin, R. T. Trancik, P. J. Trowbridge, K. A. Wolf.

The Landscape Architecture Program offers three professional degree alternatives: a twoyear graduate curriculum directed to those who have undergraduate degrees in landscape architecture or architecture, a three-year graduate curriculum directed to those who have undergraduate degrees in other fields, and a four-year undergraduate curriculum. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Undergraduate studies in landscape architecture are administered through the College of Agriculture and Life Sciences and lead to a Bachelor of Science degree.

## Course Information

*LA 141 Freehand Drawing
Fall. 3 credits.
P. Horrigan.
*LA 142 Introduction to Landscape Architecture
Spring. 4 credits.
D. W. Krall.
*LA 201 Design, Composition, and Theory
Fall. 6 credits. M. I. Adelman.
*LA 202 Design, Composition, and Theory
Spring. 6 credits.
T. H. Johnson.
*LA 261 Urban Archaeology (also CRP 2611
Fall. 3 credits.
S. Baugher.
*LA 301 Site Design and Defailing
Fall. 6 credits.
P. Horrigan.

## LANAR 302 Site Design and Detailing

Spring. 6 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies, about
$\$ 200$; expenses for field trip, $\$ 250$.
Lecs, M W F 1:25; studios, M W F
2:30-4:25. L Mirin.
This studio will engage course participants in a wide range of site-scaled projects such as subdivision developments, street improvement projects, and gardens. Projects and associated detailing will build upon knowledge gained in LA 301.
*LA 310 Site Engineering for Landscape Architects
Fall. 4 credits.
M. I. Adleman.
*LA 312 Site Construction
Spring. 4 credits.
P. J. Trowbridge.
*LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)
Spring. 3 credits.
S. Baugher.
*LA 363 American Indians, Planners, and Public Policy (also CRP 363 and CRP 547)

Spring. 3 credits.
S. Baugher.
*LA 382 The American Landscape
Spring. 3 credits. H. Gotffried.

## *LA 401 Urban Design and Planning

Fall. 6 credits
R. T. Trancik.

## *LA 402 Advanced Project Studio

Spring. 6 credits. M. I. Adleman.

## *LA 410 AutoCAD Auto Tutorial

Fall or spring. $1-5$ credits.
P. J. Trowbridge/K. Flahive.
*LA 411 LandCAD Auto Tutorial
Fall or spring. Variable $1-5$ credits. P. Trowbridge/K. Flahive.
*LA 412 Professional Practice Spring. 1 credit. K. Wolf.
*LA 480 Principles of Spatial Design and Aesthetics (also CRP 481/581)
Fall. 3 credits. R. T. Trancik.
*LA 483 Design Criticism
Spring. 2 credits. H. Gottfried.
*LA 491 Design and Plant Establishment (also HORT 491)
Fall. 3 credits.
P. J. Trowbridge/N. Bassuk.
*LA 494 Special Topics in Landscape

## Architecture

Fall or spring. 1-3 credits. Staff.

## LANAR 497 Individual Study in Landscape Architecture

Fall or spring. 1-5 credits; may be repeated for credit. S-U grades optional. Staff.
Work on special topics by individuals or small groups.
*LA 498 Undergraduate Teaching
Fall or spring. $1-3$ credits.
Staff.

## LANAR 501 Theory, Composition, and

 DesignFall. 6 credits. Lab fee, $\$ 20$; cost of basic drafting equipment and supplies, about $\$ 250$. Lecs, M W F 1:25; studios, M W F 2:30-4:25. L. Mirin.
Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

## *LA 502 Design, Composition, and

 TheorySpring. 6 credits. P. Horrigan.
*LA 505 Graphic Communication I
Fall. 3 credits. T. H. Johnson.
*LA 506 Graphic Communication II Spring. 3 credits. P. Horrigan.
*LA 514 Advanced Site Grading
Spring. 3 credits.
M. I. Adleman.

LANAR 520 Contemporary Issues in Landscape Architecture
Fall. 2 credits, S-U grades only.
Lec, F 11:15-1:10. L. Mirin.
Presentations on topics that are current and significant to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.

## LANAR 524 (522) History of European Landscape Architecture

Spring, 3 credits.
Lecs, T R 11:15; discs to be arranged. L. Mirin.

A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

## LANAR 525 (521) Mistory of American

 Landscape ArchitectureFall. 3 credits.
Lecs, T R 11:15; discs to be arranged. L. Mirin.

Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.
*LA 569 Archaeology on Preservation Planning and Landscape (also CRP 569)

Fall. 3 credits.
S. Baugher.
*LA 590 Graduate Seminar in Landscape Architecture
Fall. 3 credits.
H. Gottfried.

## *LA 601 Project Design and Application

Fall. 6 credits. Limited to graduate students. Required field trip. T. H. Johnson.
*LA 602 Urban Design and Planning (also CRP 555)
Spring. 6 credits.
R. T. Trancik and staff.
*LA 610 Site Engineering
Fall. 4 credits.
M. I. Adleman.

## *LA 612 Site Construction

Spring. 4 credits.
P. J. Trowbridge.
*LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666, CRP 360, and LA 360)
Spring. 3 credits.
S. Baugher.
*La 680 Graduate Seminar in Landscape Architecture
Fall or spring. $1-3$ credits. Staff.

## *LA 694 Special Topics in Landscape

 ArchitectureFall or spring. $1-3$ credits. Staff.
*LA 701 Natural Systems and Planting Design Studio
Fall. 6 credits.
P. J. Trowbridge/H. Gottfried.

## LANAR 800 Master's Thesis in Landscape Architecture

Fall or spring. 9 credits.
Hours to be arranged. Staff.
Independent research under faculty guidance, leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is
expected to be completed in the final
semester of residency.
*Offered through the College of Agriculture and Life Sciences.

## FACULTY ROSTER

Baugher, Sherene, Ph.D., SUNY at Stony Brook, Visiting Prof., City and Regional Planning
Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning
Bertoia, Roberto, M.F.A., Southern Illinois U. Assoc. Prof., Art
Blum, Zevi, B.Arch., Comell U. Assoc. Prof., Art
Booth, Richard S., J.D., George Washington U. Assoc. Prof., City and Regional Planning
Bowman, Stanley J., M.F.A., U. of New Mexico. Prof., Art
Christopherson, Susan M., Ph.D., U. of California at Berkeley. Asst. Prof., City and Regional Planning
Clavel, Pierre, Ph.D., Comell U. Prof., City and Regional Planning
Cody, Jeffrey, Ph D., Comell U., Visiting Assistant Professor, City and Regional Planning
Colby, Victor E., M.F.A., Comell U. Prof. Emeritus, Art

Crump, Ralph W., B.Arch., Cornell U. Prof. Emeritus, Architecture
Cruvellier, Mark R., M. Eng., Ph.D., McGill U. (Canada). Asst. Prof., Architecture
Czamanski, Stan, Ph D., U. of Pennsylvania. Prof. Emeritus, City and Regional Planning
Daly, Norman, M.A., Ohio State U. Prof. Emeritus, Art
Drennan, Matthew P., Ph.D., New York University. Prof., City and Regional Planning
Evett, Kenneth W., M.A., Colorado Coll. Prof Emeritus, Art
Forester, John, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning
Goehner, Werner H., Dipl. Ing., Technical U. Karlsruhe (Germany), M.Arch., Cornell U. Assoc. Prof., Architecture
Goldsmith, William W., Ph.D., Comell U. Prof., City and Regional Planning
Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture
Hascup, George E., B.Arch., U. of California at Berkeley. Assoc. Prof., Architecture
Hodgden, Lee F., M.Arch, Massachusetts Inst. of Technology. Prof., Architecture
Hubbell, Kent L., M.F.A.S., Yale. Nathaniel and Margaret Owens Distinguished Alumni Professor of Architecture. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof., City and Regional Planning
Jarzombek, Mark, Ph D., Massachusetts Inst. of Technology. Assoc. Prof., Architecture
Jones, Barclay G., Ph.D., U. of North Carolina. Prof., City and Regional Planning
Kelly, Burnham, M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning
Kira, Alexander, M.R.P., Cornell U. Prof., Architecture
Kord, Victor, M.F.A., Yale U. Prof., Art
Lewis, David B., Ph.D., Comell U. Assoc. Prof., City and Regional Planning
Locey, Jean N., M.F.A., Ohio U. Prof., Art
MacDougall, Bonnie G., Ph.D, Comell U. Assoc. Prof., Architecture
Mackenzie, Archie B., M.Arch., U. of California at Berkeley. Assoc. Prof., Architecture
McMinn, William G., M. Arch., U. of Texas at Austin. Dean, Prof., Architecture
Meyer, Elisabeth H., M.F.A., U. of Texas. Assoc. Prof., Art
Meyers, Victoria L., M. Arch., Harvard U. Asst. Prof. Architecture
Mikus, Eleanore, M.A., U. of Denver. Prof., Art
Miller, John C., M.Arch., Cornell U. Prof., Architecture
Mirin, Leonard J., M.L.A., U. of Michigan. Assoc. Prof., Landscape Architecture
Mulcahy, Vincent J., M.Arch., Harvard U. Assoc. Prof., Architecture
Ochshorn, Jonathan, M. Urban Design, City College of New York, Asst. Prof., Architecture
Olpadwala, Porus, Ph.D., Comell U. Assoc. Prof., City and Regional Planning
Otto, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M.Arch., Comell U. Asst. Prof., Architecture
Page, Gregory, M.F.A., U. of Wisconsin. Assoc. Prof., Art
Parsons, Kermit C., M.R.P., Comell U. Prof., City and Regional Planning
Pearman, Charles W., B.Arch., U. of Michigan. Prof., Architecture
Perlus, Barry A., M.F.A., Ohio U., Assoc. Prof., Art

Poleskie, Stephen F., B.S., Wilkes Coll. Prof., Art
Reps, John W., M.R.P., Comell U. Prof.
Emeritus, City and Regional Planning
Richardson, Henry W., M.R.P., Cornell U. Assoc. Prof., Architecture
Rowe, Colin F., M.A., U. of London (England). A. D. White Prof. Emeritus

Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture
Zissovici, John, M.Arch., Cornell U., Asst. Prof., Architecture

## DIVISION OF BIOLOGICAL SCIENCES

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Comell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

## ORGANIZATION

The Division of Biological Sciences is composed of seven sections: Biochemistry, Molecular and Cell Biology; Ecology and Systematics; Genetics and Development; Micrubiology; Neurobiology and Behavior Physiology; Plant Biology; and, in addition the L. H. Bailey Hortorium and the Shoals Marine Laboratory.
Student services are provided by the division's Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward or brigantine Corwith Cramer.

## DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or $107-108$ or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 ( 6 or 8 credits, respectively) satisfies the requirement for introductory biology. The additional credits may be satisfied by any biological sciences courses except Biological Sciences 152, 200 (unless permission of associate director is obtained), 202, 205, 206, 208, 209, 301 , or 367.

For College of Arts and Sciences students matriculating before fall 1992, the biological sciences distribution requirement is for a twosemester introductory biology sequence
selected from Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or $107-108$ or any combination of the first term of one sequence and the second term of another. An Advanced Placement score of 4 or 5 fulfills one-half the distribution requirement. Students must take an upper-level biology course to complete the distribution requirement in biological sciences. The remainder of the distribution requirement may be satisfied by an upper-level course (200+) offered by the Division of Biological Sciences other than Biological Sciences 152, 200 (except by permission of associate director), $202,205,206,208,209,301$, or 367 ; Anthropology 101; or Chemistry 222 or any combination of the first term of one sequence and the second term of another.
For students in the College of Arts and Sciences who matriculate fall 1992 or later, all courses offered by the Division of Biological Sciences can be used toward fulfillment of the biological distribution requirement except Biological Sciences 152, 200 (unless permission of the associate director is obtained), 202, $205,206,208,209,301$, or 367 . The following courses are especially suitable for the distribution requirement because they have no prerequisites: Biological Sciences 101-104, 105-106, 107-108, 109-110, 160, 170, 192, 201, 207, 212, 246, 275. Note that introductory biology can only count for distribution credit when taken as a twosemester sequence: 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108, or a combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 ( 6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences $109-110,101$ and 103 plus 102 and 104, 105106 or 107-108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 ( 6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences

Note: Biological Sciences 101-102-103-104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

## THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is
coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 200 Stimson Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a program of study area and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and math ematics (see requirements 1-3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Comell cumulative gradepoint average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a provisional basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.
The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S-U grades only.

1) Introductory biology for majors
(one year): Biological Sciences 101 and 103 plus 102 and 104, or 105-106 Biological Sciences 107-108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101 and 103,102 and 104, or 103-104. These students should consult information available in the course office ( 1140 Comstock Hall) and in the Biology Center ( 216 Stimson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, completion of Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits ( 4 AP credits plus 4 course credits).
2) General chemistry (one year): Chemistry 207-208," or 215-216,* or

103-104.
3) College mathematics (one year) Two semesters of calculus (Mathematics 111-112, 191-192, or their equivalents) or one semester of calculus plus either Mathematics 105 or Statistics and Biometry 102. Education 115 may not be used to fulfill any part of this requirement
4) Organic chemistry: Chemistry 253 and 251 , or 253 and 301 , or 357-358 and 251, or 357-358 and 301, or 359360 and 251 , or 359-360 and 301
5) Physics: Physics 207-208,* 112-213,* or 101-102. Those who take Physics 112-213 are advised to complete Physics 214 as well.
6) Genetics: Biological Sciences 281 .
7) Biochemistry: Biological Sciences 330 , or 331 and 332, or 333.
8) Evolutionary Biology: Biological Sciences 378.
9) A program of study selected from the outline below
10) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by
(a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college
*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

## Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) Animal Physiology: BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology: The

Biology of Tissues; BIOAP 316, Cellular Physiology; and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research.
2) Biochemistry: Quantitative Chemistry (Chemistry 300 or completion of Chemistry 215-216 for the general chemistry requirement for the major); a minimum of four credits of organic chemistry laboratory (Chemistry 301302 or 251-252-302 or 301 or 251-252) one of the 5 -credit options of Biochemistry (331 and 332 or 330 for 5 credits) is strongly recommended; a biochemistry laboratory course (BIOBM 638 or 430 or 630 ); and Physical Chemistry (Chemistry 389-390.1 or 287-288 or 287-390.1 or 389-288). Note that Chemistry 288 is designed for biologists. It is recommended that students interested in graduate work in biochemistry take the more rigorous organic chemistry and physics sequences (Chemistry 357-358 or 359360 and Physics 207-208), six credits of organic chemistry laboratory, and a third semester of calculus in preparation for the more rigorous physical chemistry sequence (Chemistry 389390). Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103-104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.
3) Cell Biology: Chemistry 300 or 215216, Quantitative Chemistry; BIOBM 432, Survey of Cell Biology; BIOBM 630, Laboratory in Cell Biology (strongly recommended), or BIOBM 638, Intermediate Biochemical Methods, or BIOBM 430, Basic Biochemical Methods; and at least 5 additional credits chosen from the following courses: BIONB 222 , Neurobiology and Behavior II: Introduction to Neurobiology; BIO G 305, Basic Immunology; BIOAP 313, Histology: The Biology of the Tissues; BIOPL 345, Plant Anatomy; BIOBM 435-436, Undergraduate Biochemistry Seminar; BIOBM 437, Oncogenes and Cancer Viruses; BIOPL 444, Plant Cell Biology; BIOGD 483, Molecular Aspects of Development; BIOBM 636, Cell Biology; BIOBM 639, The Nucleus; An S 419, Animal Cytogenetics.
Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year and are strongly encouraged to take one of the 5 -credit options of Biochemistry ( 331 and 332 or 330 for 5 credits). If graduate work in cell biology is anticipated, students should consider taking a physical chemistry sequence (Chemistry 389-
390.1 or $287-288$ or $287-390.1$ or $389-$ 288).
4) Ecology and Evolutionary Biology: BIOES 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:
(a) BIOES 241, Introductory Botany; BIOES 274, Functional and Comparative Morphology of Vertebrates; BIOES 373, Biology of the Marine Invertebrates; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 471, Mammalogy; BIOES 472, Herpetology; BIOES 475, Omithology; BIOES 476, Biology of Fishes; Entom 212, Insect Biology
(b) BIOES 263, Field Ecology; BIOES 272, Functional Ecology: How Animals Work; BIOES 448, Plant Evolution and the Fossil Record; BIOES 452,
Herbivores and Plants: Chemical Ecology and Coevolution; BIOES 455, Insect Ecology; BIOES 456, Stream Ecology; BIOES 457 and 459, Limnology: Ecology of Lakes, Lectures and Laboratory; BIOES 461, Population and Evolutionary Ecology; BIOES 462, Marine Ecology; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; BIOES 464, Microevolution and Macroevolution; BIOES 470, Ecological Genetics; BIOES 473, Ecology of Agricultural Systems; BIOES 478, Ecosystem Biology; BIOES 479, Paleobiology; BIOGD 481, Population Genetics.
Note: One 400 -level, 4 -credit course offered at Shoals Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.
Note: The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.
5) General Biology: The Program of Study in General Biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences in addition to courses counted towards requirements $1-8$ above. These credits must include one course (200-level or above) from the courses listed for at least three of the eight other programs of study (see pages 124-125), and must include a course with a laboratory and a minimum of two upper-level ( 300 and above) courses of two or more credits. BIO G 498 may not be used as one of the upper-level courses. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser.
6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 389, Embryology; BIONB 423,
Neurogenetics; BIOBM 438, Yeast Genetics and Molecular Biology; BIOES 470, Ecological Genetics; BIOGD 481,

Population Genetics; BIOGD 482,
Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOMI 485, Microbial Genetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 639, The Nucleus; BIOPL 641, Laboratory in Plant Molecular Biology; BIOI'L 644, Plant Growth and Development; BIOPL 652, Plant Molecular Biology II; BIOPL 653, Plant Molecular Genetics; BIOGD 682, Fertilization and the Early Embryo; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 686, Mammalian Development; BIOGD 687, Developmental Genetics; BIOMI 694, Genetics of Diverse Bacteria; P1 Br 606, Advanced Plant Genetics.
Up to 3 credits for this program of study may be chosen from other biological sciences courses with approval of the faculty adviser.
7) Microbiology: BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 300, Seminar in Microbiology; BIOMI 391, Advanced Microbiology Laboratory; and at least 5 credits from the following course lists, including at least one course from each group: (a) BIOMI 485, Microbial Genetics; or BIOMI 416, Microbial Physiology; and (b) BIOMI 415, Bacterial Diversity; or BIOMI 451, Structure and Function of Bacterial Cells.
8) Neurobiology and Behavior: The twosemester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section ( 4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings. BIONB 420, BIO G 498 and 499 , and BIONB 720 may not be used as this neurobiology and behavior course. However, these readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the Program of Study in Neurobiology and Behavior.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.
9) Plant Biology: Students choose one area of study from the following two options:
Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244 , Plant Physiology, Lectures and Laboratory; BIOPL 246, Plants and Civilization; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344 ,

Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 359, Biology of Grasses; BIOPL 444, Plant Cell Biology; BIOPL 445 , Photosynthesis; BIOPL 447, Molecular Plant Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.
Option (b) Plant Biotecbnology: Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 346, Algal Physiology; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; Pl Br 401, Plant Cell and Tissue Culture; or $\mathrm{Pl} \mathrm{Br} \mathrm{402}$, Tissue Culture Laboratory.
10) Independent Option: A special program for students interested in nutrition is available under this option. In addition, students who want to undertake a course of study not covered by the nine existing programs of study or the special program may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

## Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a program of study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the availability of space and equipment suitable for the proposed project Students accepted for independent research enroll for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216 Stimson Hall.
Research credits may not be used in completion of the following program of study areas: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; genetics and development; microbiology; plant biology. No more than 4 credits of research
may be used in completion of the Program of Study in Neurobiology and Behavior.
The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences (BIO G) 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Comell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. (Grades eamed in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the division to serve as cosigner of the research. The division cosigner must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation Recommendation to the faculty that a candidate graduate with honors is the responsibility of the Honors Program Committee.
Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering study abroad during their junior year should consult with a member of the Honors Committee during their sophomore year to plan a reasonable schedule for honors research. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Therefore, students who are considering studying away from campus during the senior year should
consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall. Deviation from any of the requirements of the Honors Program requires a petition in the form of a letter to the Honors Program Committee, c/o 200 Stimson Hall.

## CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

## ADVISING

Students in need of academic advice are encouraged to consult their advisers, come to the Behrman Biology Center ( 216 Stimson Hall), or contact the associate director for academic affairs ( 200 Stimson Hall).
Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.
Students interested in the multidisciplinary program Biology and Society should see
"Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

## INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Systematics, BIOES; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.
Note: Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

## GENERAL COURSES (BIO G)

BIO © 101-102 Biologlcal Sciences, Lectures
101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in Bio G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. S-U grades optional, with permission of instructor. May not be taken for credit after Bio S 105106 or 109-110.

Lecs, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 22 and Nov. 8; spring, Feb. 23 and Apr. 6. A. W. Blackler.

Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, and cell and tissue biology. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory.

## BIO G 103-104 Biological Sciences, Laboratory

103, fall; 104, spring. 2 credits each term Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. S-U grades optional, with permission of instructor. No admittance after second week of classes.

Lab, M T W or R 1:25-4:25, M or W 7:30-
$10: 30 \mathrm{p} . \mathrm{m}$. or T R or $\mathrm{S} 8-11$. One 3 -hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.
BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. Firstsemester topics include biochemistry, physiology, invertebrate diversity, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, immunology, plant biology, population genetics and growth, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor

## BIO G 105-106 Introductory Biology

105 , fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106 , unless written permission is obtained from instructor. S-U grades optional, with written permission of instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Estimated cost for dissection kit, \$11.

Lec, T 9:05 (1st lec of fall term, R 8/25
9:05); additional study and lab hours to be arranged. Staff.
Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Physiology, anatomy (accompanied by preserved vertebrate and invertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who cannot respect deadlines should take another course. Four formal laboratory sessions are offered each semester; additional laboratory work is
included in the core units. Evaluation is based on written reports on experimental work or on extensive dissections (both vertebrate and invertebrate) with practical exams. Performance on the core units, the laboratories, and the final examination determine the final grade. Students who object to dissecting live invertebrates may want to take another biology course.

## BIO G 107-108 General Biology

Summer (8-week session; 107, weeks 1-4; 108, weeks 5-8). 4 credits each. Prerequisite: BIO G 101-103, 105, or 107 is a prerequisite for 108 . Fee, $\$ 25$ for weeks $1-4 ; \$ 15$ for weeks 5-8.

Lecs, M-R 9-12; labs, M T R 1:30-4:30, F 9-12. Staff.
Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G $107-$ 108 fulfills the introductory biology requirement for majors and forms a suitable
introductory biology course sequence for students intending to go to medical school.

## BIO G 109-110 Biological Principles

109, fall; 110 , spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or $101-103$ or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. Letter grades only. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences. Note that this course may not always satisfy the prerequisite for second- and third-level courses in biology.

Lecs, M W F 9:05 or 10:10; lab, M T W R or
F 2-4:25 or T 10:10-12:35. Students do not choose lab sections during course
enroliment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks.
Evening prelims: fall, Sept. 22 and Nov. 8; spring, Feb. 23 and Apr. 6. R. Turgeon, C. Eberhard.

Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology but addresses itself to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-
solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of vertebrate and invertebrate material.

BIO 0152 Special Topics in Biology Spring. 1 credit. Limited to 30 students. Prerequisites: superior performance in BIO G 109 or equivalent and concurrent enrollment in 1 BIO G 102, 106, or 110 , or written permission of instructor. S-U grades only. This course may not be used in fulfillment of college distribution requirements.

Lec, T 3:35; occasional field trips to be
arranged. R. Turgeon, C. Eberhard, and guest lecturers. Guest lecturers discuss topics in their field of research interest. This course is designed to complement introductory biology by providing an opportunity for deeper exploration of selected topics of interest. Class involvement and discussion are encouraged.

## BIO G 170 Evolution of the Earth and Life

 (also Geological Sciences 102) Spring. 3 credits. Recommended: Geol 101. S-U grades optional.Lecs, T R 9:05 or 11:15; lab, M T W or
R 2:00-4:25; field trips during lab.
J. L. Cisne.

Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drift, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs; mass extinctions; human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.

## BIO G 200 Special Studies in Biology

Fall, spring, or summer. 1-3 credits.
Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor.

Hours to be arranged. Staff.
A registration device for students who want to take only a portion of a regular biological sciences course-for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission of the associate director of the division.

## [BIO G 201 Biotechnology: The "New" Biology (also Biology and Society 201)

Spring. 3 credits. This course is for students not majoring in biological sciences. Students who have taken or are currently enrolled in BIOGD 281 or BIOBM 330 or 331 may not enroll. S-U grades optional. Not offered 1994-95.

Lecs, T R 2:30-4:25. Disc T or R 3:35 starting week 3 ; disc assignments made during week 2. J. M. Fessenden
MacDonald, J. M. Calvo, S. Howell.
Designed for nonmajors, a general introduction to the application and issues of modern molecular biology in medicine and agriculture Information on recombinant DNA technology, monoclonal antibodies, plant cell culture techniques, and embryo maniputation
methods is presented. Topics include medical diagnostics and treatments; environment, agriculture, and food; and economic, socialpolicy, regulatory, ethical, and legal issues that surround biotechnology. The course is taught in three modules and the topics vary from year to year. Topics for 1995 are human gene mapping and genetic screening, crop plant biotechnology, immunodiagnostics and therapy, and AIDS and cancer. Recommended for those students who want to understand some new research discoveries, their applications, and social, legal, ethical, and policy issues stemming from them.]
BIO G 205 Ethics and Health Care lalso Biology and Society 205 and Science and Technology Studies 205)
Fall or summer (6-week session). 4 credits. Limited to 100 students ( 25 under BIO G 205, 25 under B\&Soc 205, and 50 under Phil 245). Registered students not attending during the first week will be dropped from the course.
Open to sophomores, juniors, and seniors.
Lecs, T R 8:40-9:55; disc, T or R 10:10 or $1: 25$. Staff.
This course examines the ethical problems that emerge from cases of health care and search for practical solutions, while also delving deeper into understanding the nature of ethical responsibility and the tools of ethical analysis. This is a lab course in philosophy, with considerable work-both individually and in groups-on specific cases, problems, and fundamental ethical questions. Major sections include life, death, reproduction, and ethics; concepts of health care;
health care and society; and research.
BIO Gi 206 Ethics and the Environment (also Biology and Society 206 and Science and Technology Studies 206)

Spring. 4 credits. Limited to 100 students ( 25 under BIO G 206, 25 under B\&SSoc 206, and 50 under Phil 246). Permission of instructor required for freshmen.

Lecs, T R 8:40-9:55. Disc, 1 hour each week to be arranged. Staff.
This course addresses how ethical analysis helps shape our responses to environmental problems. Case studies help guide our assessments. This is a lab course in philosophy. The course challenges the student to develop ethical solutions or approaches individually and in groups. Major aims of the course include articulating the relationships between knowledge and values and distinguishing between ethics and economics, ecology, ideology, politics, and prudence or wisdom. A background in basic ecology or environmental issues or ethics is strongly recommended.
BIO G 207 Evolution (also History 287 and Science and Technology Studies 287)

Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOES 378. S-U grades optional.

Lecs, T R 10:10; disc, 1 hour each week to be arranged. W. B. Provine.
Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology and exploring the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in
natural populations to the conflict between creationists and evolutionists.

BIO G 208 Drawing the Muman FIgure
Summer ( 6 -week session). 3 credits.
Labs, M T W 3-5:15. K. Kucharski.
Human anatomy. Emphasis on learning correct anatomical information relating to the skeletal and muscular systems as approached through observation and drawing practices.

## BIO G 209 Introduction to Natural

 Science lllustrationSummer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional.

Lecs and labs, T R 6:30-9:30 p.m.
B. S. King.

An introduction to the att of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.
BlO G 301 Biology and Society: The Social Construction of Llfe (also Biology and Society 301 and Science and Technology Studies 401)
Fall. 4 credits. Prerequisite: one year of introductory biology.

Sems and discs, M W 2:30-4:25.
P. J. Taylor

Controversial issues, past and present, in the life sciences and tools for analysis of the social, historical, and conceptual underpinnings of these issues. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology and reproductive interventions, and ecology and environmental change. Analytic themes include bias, metaphor, historical semantics, styles of explanation, determinism, causality, interest, social construction, and gender. Through discussions and writing assignments, students develop analytic skills and their own responses to current issues.

## BIO G 305 Basic Immunology, Lectures

 (also Veterinary Microbiology 315)Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor.

Lecs, T R 8:30-9:55. Evening prelims:
Sept. 22, Oct. 13, and Nov. 10.
A. J. Winter.

A survey of immunology, with emphasis on the biological functions of the immune response.
BIO G 400 Undergraduate Seminar in Biology
Fall or spring. Variable credit ( $1-3$ credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional.

> Sem to be arranged. Staff.

From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology please see descriptions under appropriate section.

## BIO G 401 Introduction to Scanning Electron Microscopy

Fall or spring, weeks $1-8.1$ credit. Limited to 8 students (fall), 12 students (spring).
Prerequisite: permission of instructor. S-U grades optional

Lec, M 10:10; lab, T R or F 9:05-12:15 or T W or R 1:25-4:25. Fee may be charged. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

## BIO G 403 Transmission Electron Microscopy for Biologists

Fall. 1, 2, or 3 credits. 3 credits if student takes both sections. Limited to 12 students. Prerequisites: BIOAP 313, BIOPL 345 or 443 , or written permission of instructor. S-U grades optional.

Lec, T 11:15; labs, M W or T R 1:25-4:25 Two sections: Sec 01, 1 credit, weeks $1-4$; $\sec 02,2$ credits, weeks 5-8. Students may register for one or both sections. Fee may be charged. M. V. Parthasarathy.
Section 01, 1 credit, weeks $1-4$, covers the principles and use of the transmission electron microscopy (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 2 credits, weeks 5-8, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixtures, cryofixations, ultrathin sectioning, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

## BIO G 405 Electron Microscopy in Molecular Blology

Fall, weeks 9-12. 1 credit. Limited to 12 students. Prerequisites: BIO G 403 or proficiency in transmission electron microscopy and written permission of instructor. S-U grades optional.

Lec, T 11:15; labs, M W or T R 1:25-4:25. Fee may be charged. M. V. Parthasarathy, M. Kyle.

An introductory course to electron microscopy (EM) for use as a tool in analyzing molecular structure, interactions, and processes. Methods considered to be most generally applicable to current studies in molecular biology are covered, including visualization of nucleic acids, heteroduplexes, protein molecules and filaments, and EM immunolabelling.

## BIO G 408 Viruses and Disease (also

 Veterinary Microblology 417) (formorly Bio $\$ 308$ and VETMI 317) Spring. 3 credits. Prerequisites: BIOMI 290, 291; BIO G 305; and permission of instructor Recommended: BIOGD 281Lecs, M W $7: 30$ p.m. J. Casey.
The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasis are highlighted in the context of
approaches to prevent or reduce the severity of diseases.

## Blo G 450 Light and Video Microscopy for Biologists

Spring. 3 credits. Limited to 12 students. Prerequisite: one year of introductory biology and permission of instructor.

Lecs, T R 1:25-2:30; lab, R 2:30-4:30.
R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffmanmodulation contrast, interference, differentialinterference contrast, and fluorescence microscopy, as well as video- and computerbased digital image enhancement, are studied. Students leam both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

## B10 G 469 Food, Agriculture, and Society (also Biology and Society 469 and Science and Technology Studles 469)

Spring. 3 credits. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Limited to 20 students.

Lecs, T R 1:25-2:40. A. G. Power A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

## BIO G 498 Teaching Experience

Fall or spring. 1-4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. S-U grades optional, with permission of instructor. Students in the College of Arts and Sciences may not count credits from this course toward the 120 credits required for graduation.

Hours to be arranged. Staff.
Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105-106; BIOAP 311, 319; BIOBM 231, 330, 430; BIOES 274, 475; and BIOMI 291, 292.

## BIO a 499 Undergraduate Research in

 BlologyFall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office for Academic Affairs in 200 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices and in 200 Stimson Hall.) S-U grades
optional. Any faculty member in the Division of Biological Sciences may act as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as cosigner, taking full responsibility for the quality of the work.

Hours to be arranged. Staff.
Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may not be used in completion of the following programs of study: animal physiology and anatomy; biochemistry; cell biology; ecology and evolutionary biology; genetics and development; microbiology; plant biology. No more than 4 credits of research may be used in completion of the program of study in neurobiology and behavior.

## BIO 0606 Freeze-Fracture Technique

 Spring, weeks 9-14. 1 credit. Primarily for graduate students. Limited to 8 students.Prerequisites: BIO G 403 or equivalent, and permission of instructor. S-U grades only. Lec, M 10:10; disc to be arranged; labs, M W 1:25-4:25. Fee may be charged.
M. V. Parthasarathy.

Principles of freeze-fracturing and freezesubstitution technique, freezing artifacts, and interpretation of images.

## BIO 0608 Advanced Electron Microscopy for Biologists

Spring, weeks 10-14. 1 credit. Primarily for graduate students. Limited to 6 students. Prerequisite: BIO G 403 or equivalent. S-U grades only.

Hours to be arranged. Fee may be
charged. M. V. Parthasarathy.
Project in biological ultrastructure.

## Blo © 702 X-Ray Elemental Analysis in

 BiologySpring, weeks 7-14. 1 credit. Limited to 6 students. Prerequisites: BIO G 403 or equivalent, and permission of instructor. S-U grades only. Offered altemate years.

Lec and lab to be arranged. Fee may be
charged. M. V. Parthasarathy,
C. Daugherty.

Principles of X-ray elemental analysis are discussed, with special reference to the energy-dispersive system. Emphasis is on qualitative elemental analysis of biological specimens and preparation of material for such analysis, including freeze-substitution technique. A brief incroduction to quantitative elemental analysis is also given.

## [BIO G 705 Advanced Immunology

 Lectures (also Veterinary Microbiology 705)Spring. 3 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W F 9:05. Coordinator:
A. J. Winter.

Coverage at an advanced level of molecular and cellular immunology.]

## BIO G 706 Immunology of Infectlous

 Diseases and Tumors (also Veterinary Microbiology 719)Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades with permission of instructor. Offered alternate years.

Lec, R 10:10-12:05. Coordinator:
A. J. Winter.

Coverage at an advanced level of the immunology of diseases caused by selected bacterial, viral, protozoan, and helminthic parasites, and tumor immunology.

Related Courses in Other Departments
The Sea: An Introduction to Oceanography (Biological Sciences [BIOES] 154)
Medicine and Civilization (Biology and Society 322)
Pathogenic Bacteriology and Mycology (Biological Sciences [BIOMI] 304 and Veterinary Microbiology 318)

## ANIMAL PHYSIOLOGY (BIOAP)

## BIOAP 212 Human Physiology for MonBiology Majors

Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students.
This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any Program of Study in the biological sciences major. Lecs, M W F 1:25; disc, M W or F 2:15. Evening prelims: Mar. 2 and Apr. 18.
P. Concannon and staff.

Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by staff of research physiologists and cooperating physicians.

## BIOAP 214 Biological Basis of Sex Differences (also Biology and Soclety 214 and Women's Studies 214)

Fall. 3 credits. Limited to non-biology majors and freshman and sophomore biology majors. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years.

Lecs, T R 8:30-9:55; occasional discussion to be arranged. J. E. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction; where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

## BIOAP 311 Introductory Animal Physiology, Lectures (also Veterinary Physiology 346)

Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor.

Lecs, M W F 11:15. Evening prelims: Sept.
20 and Oct. 27. E. R. Loew and staff. A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function
relationships are stressed along with underlying physico-chemical mechanisms.

## BIOAP 312 Farm Animal Behavior (also Animal Science 305)

Spring. 2 credits. Prerequisites: introductory course in animal physiology. Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lecs, T R 11:15. E. A. Oltenacu,
K. A. Houpt.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to feeding, reproduction, and social interactions of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

## BIOAP 313 Histology: The Biology of the Tissues

Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOAP $311,316,319$, or their equivalents; BIOBM 330 or 331 , or their equivalents; and organic chemistry.

Lecs, T R 1:25; labs, T R 2:30-5.
R. B. Silver.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with invertebrate or vertebrate animals.

## BIOAP 316 Cellular Physiology

Spring. 4 credits. Limited to 100 students, With preference given to students studying in animal physiology and anatomy. Each lab limited to 24 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333.

Lecs, M W F 9:05; lab, M T or W 1:25-5 (a
R 1:25-5 lab may be added if enrollment
exceeds 72 students). Evening prelims:
Feb. 28, Apr. 6, and May 2. A. Quaroni
and staff.
Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function in vivo and in vitro. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

## BIOAP 319 Animal Physiology <br> Experimentation

Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 4 afternoon laboratory sections limited to 20 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor based on previous meritorious performance in another introductory animal physiology course.

Lec, F 12:20; lab, M T W or R 12:20-5
(includes disc section). R. A. Corradino. A series of student-conducted in vilro and in vivo experimental exercises designed to illustrate basic physiological processes in animals and to introduce students to animal physiology research techniques, instrumenta tion, experimental design, and interpretation of results. Techniques include anesthesia dissection, vivisection under anesthesia, physiographic recording, and computer analysis. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals of several vertebrate species, including frogs, rats, and rabbits, which are euthanized in conjunction with the laboratory exercises. Written reports of laboratory activities are required. Grading is hased on evaluation of these reports, quizzes, and laboratory performance

## BIOAP 419 Advanced Animal Physiology

 ExperimentationSpring. 3 credits. Prerequisite: BIOAP 319 previous semester. Limited to 6 selected students.

Lab to be arranged. R. A. Corradino,
coordinator.
Advanced research on slected aspects of
laboratories conducted in BIOAP 319, Animal Physiology Experimentation.
BIOAP 458 Mammalian Physiology
Spring. 3 credits. Enrollment limited.
Graduate student auditors allowed. Prerequisite: BIOAP 311. Students not meeting this prerequisite must obtain written permission of instructor in 826 Vet Research Tower before the first class.

Lecs, M W F 10:10. K. W. Beyenbach and staff.
An in-depth treatment of selected topics in mammalian physiology and human physiology. Emphasis is on a conceptual and working knowledge of physiology rather than a factual, memorizing knowledge. Topics selected, in order of presentation, include recurrent themes in physiology; basic functional elements of biological systems; design of multicellular animals; mammalian fluid compartments; homeostasis; cardiovascular, respiratory, gastro-intestinal, and renal physiology; and energy metabolism. The course concludes with a discussion of integrative physiology by considering the multiple, parallel short-term responses of the human body to exercise. Recommended for biological sciences majors, pre-med and prevet students, and beginning graduate students in physiology, nutrition, and animal science.

## BIOAP 615 Nutrition, Physiology, and

 Biochemistry of Mineral Elements (also Veterinary Physiology 759 and Nutritional Sciences 659)Spring. 2 credits. Prerequisites: courses in basic physiology, intermediate biochemistry, and general nutrition.

Lec, T 2:30-4:25. R. Schwartz,
R. H. Wasserman, D. R. Van Campen,
C. C. McCormick.

Lectures on nutritional aspects and physiological, biochemical, and hormonal relationships of the major macroelements and microelements, with emphasis on recent developments. Discussions of methodologies of mineral research and essentiality, transport, function, homeostasis, interrelationships, and toxicity of various mineral elements.
[BIOAP 618 Biological Membranes and Nutrient Transfer (also Veterinary Physiology 752
Spring. 2 credits. Prerequisites: courses in animal or plant physiology, quantitative and organic chemistry, and physics. Recommended: a course in cellular physiology. S-U grades optional, with permission of instructor Offered alternate years. Not offered 1994-95.

Lecs, T R 11:15. R. H. Wasserman.
An introduction to elementary biophysical properties of biological membranes; theoretical aspects of permeability and transport; mechanism of transfer of inorganic and organic substances primarily across epithelial membranes; and characteristics and properties of transporting macromolecules and ion channels.]

## BIOAP 619 Lipids (also Nutritional Sciences 602)

Fall. 2 credits.
Lecs, T R 11:15. A. Bensadoun
Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology; function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

## [BIOAP 658 Molecular Mechanisms of Hormone Action (also Veterinary Physiology 758)

Spring. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years. Not offered 1994-95

Lecs, T R 10:10. R. A. Corradino
An advanced course developed from the current literature on endocrine mechanisms Primarily a lecture course with student discussion.]

## BIOAP 710-718 Special Topics in

 PhysiologyFall or spring. 1 or 2 credits for each topic May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor Lectures, laboratories, discussions, and seminars on specialized topics.
Fall 1994: four topics are offered.

## BIOAP 711 Stress Physiology

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years.

Lec, 1 hour each week to be arranged. K. A. Houpt.

Emphasis of course is on physiological and behavioral assessment of stress in domestic and laboratory animals.

BIOAP 713 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years.
Lec, 1 hour each week to be arranged. R. F. Gilmour.

Survey of cardiac action potentials, passive membrane properties, ion channels, and cardiac arrhythmias. Emphasis on non-linear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

## BIOAP 715 Acid-Base Relations (also

 Veterinary Physiology 627)Fall or spring. 2 credits.
Autotutorial. A Dobson.

BIOAP 717 Proteolysis in Physiological Function and Dysfunction

## Fall. 1 credit

Lec, 1 hour each week to be arranged. J. F. Wooton.

Spring 1995: two topics are offered.
BIOAP 714 Physiology of Pregnancy
Spring. 2 credits. Offered alternate years.
Lec, 2 hours each week to be arranged.
P. W. Nathanielsz.

Seminar course covering aspects of maternal, placental, and fetal function. Emphasis on fetal growth, respiration, neural and endocrine and cardiovascular functions, myometrial activity, parturition, and placental function

## BIOAP 715 Acid-Base Relations (also

 Veterinary Physiology 627)Fall or spring. 2 credits.
Autotutorial. A Dobson.
BIOAP 719 Graduate Research in Animal Physiology (also Veterinary Physiology 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 725. S-U grades optional.

Hours to be arranged. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

## [BIOAP 757 Current Concepts in

 Reproductive BiologyFall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lec, 2 hours each week to be arranged;
disc, 1 hour each week to be arranged.
J. E. Fortune, W. R. Butler, and staff. A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/ function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.]

## BIOAP 811 Advanced Physiological

 Methods IFall. 2 credits. Enrollment limitecl. Prerequisites: graduate student status or permission of course coordinator. S-U grades only.

Lab to be arranged. Staff. (Coordinator: K. Beyenbach).

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/ methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

## BIOAP 812 Advanced Physiological Methods II

Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only.

Lab to be arranged. Staff. (Coordinator: K. Beyenbach).

This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques, methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

Integration and Coordination of Energy Metabolism (Biological Sciences [BIOBM] 637 and Nutritional Sciences 636)
Neuroanatomy (Veterinary Anatomy 504)
Sensory Function (Biological Sciences [BIONB] 492)

Teaching Experience (Biological Sciences [BIO G] 498)

Undergraduate Research in Biology (Biological Sciences [BIO G] 499)

## BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

## BIOBM 132 Orientation Lectures in

 BiochemistrySpring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lec, S 10:10-11:00, for first 3 S of semester. Section chair and staff.
Discussions by six professors about their research and promising areas for research in the future.

## BIOBM 231 General Biochemistry

Fall. 3 credits. Intended for students who have not studied biochemistry previously and who do not expect to pursue it further. Not recommended for students who have taken organic chemistry. Prerequisite: Chemistry 104 or 208 or equivalent. Preregistration with instructor required (306 B Rice Hall). S-U grades optional.

Lecs, M W F 12:20. J. M. Griffiths. A brief introductory section relating organic chemistry to biochemistry is given, followed by the biochemical material in the usual onesemester introductory courses. Topics of general interest are also included.

## BIOBM 232 Recombinant DNA

Technology and Its Applications (also Biology and Society 232)
Spring. 3 credits. S-U grades optional.

Limited to freshmen with AP 4 or 5 in biology. Possible fee for course material.

Lecs and disc, M W F 11:15. J. M. Calvo,
J. M. Fessenden MacDonald.

An introduction to molecular approaches to biology. Basic concepts underlying recombinant DNA technology together with strategies for cloning genes are discussed. Much of the course deals with applications of recombinant DNA technology to basic research and to biotechnology. Applications to be discussed include screening for genetic diseases, animal and plant improvement, and production of proteins useful in medicine, agriculture, and industry. Scientific, historical, regulatory, social, and ethical issues are presented and discussed. Recommended especially for students desiring a firm background in recombinant DNA technology in preparation for taking genetics and biochemistry.

## BIOBM 330-331 Principles of

 BiochemistryIntroductory biochemistry is offered in two formats: individualized instruction (330) and lectures ( 331 and 332). Individualized instruction is offered to a maximum of appruximately 200 students each semester. Lectures given fall semester (331) and spring

## (332) semesters.

## BIOBM 330 Principles of Biochemistry, Individualized Instruction

Fall or spring. 4 or 5 credits (5-credit option includes 4 additional papers and 4 other activities). Prerequisite: One year introductory biology for majors, Chem 253 or 358 or equivalent, or permission of instructor. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only.

Hours to be arranged. Evening prelims:
fall, Oct. 18; spring, Mar. 14.
J. E. Blankenship, G. S. Albrecht,
P. C. Hinkle, R. Wu, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, INA. RNA, protein synthesis, and an introduction to gene cloning. No formal lectures; autotutorial format. The four-credit option includes discussion sessions on three research papers on protein structure and function. The five-credit option includes four additional research papers on molecular biology and four other activities that include use of a silicon-graphics workstation, discussion of review articles, or discussion of other research papers.

## BIOBM 331 Principles of Biochemistry:

 Proteins and MetabolismFall. 3 credits. Prerequisites: One year introductory biology for majors and Chem 253 or 358 or equivalent, or permission of instructor. May not be laken for credit after BIOBM 330 or 333 . S-U grades with permission in instructor.

Lecs, M W F 10:10. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include methods for studying proteins, protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

## BIOBM 332 Principles of Blochemistry: Molecular Biology

Spring. 2 credits. Prerequisites: One year general biology and one semester organic chemistry or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional with permission of instructor.

Lecs, T R 12:20. T. C. Huffaker. A comprehensive course in molecular biology that covers the structure and properties of DNA. DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

## BIOBM 333 Principles of Biochemistry,

 LecturesSummer ( 6 -week session). 4 credits.
Prerequisite: Chem 253 or 358 or equivalent. Lecs, M-F 9-11. J. M. Griffiths.
The chemistry of biological substances and their transformations in living organisms. The major areas of biochemistry are covered comprehensively. For advanced undergraduates and graduate students; a prerequisite for the intermediate and advanced courses in biochemistry offered during the fall and spring terms or a terminal course.

## BIOBM 430 Basic Biochemical Methods

 Fall or spring. 4 credits. Enrollment limited. Prerequisites: Either BIOBM 330 or 333 or 332 and concurrent enrollment in 331, organic chemistry lectures and laboratory, and permission of instructor obtained by preregistering in Rice 306 B. Concurrent registration in BIOBM 330 or 331 may be arranged in the fall term for graduate students.Lec and disc, F 1:25; labs, M W or T R 12:20-4:25. R. R. Alexander, J. M. Griffiths, and staff.
A laboratory course designed to introduce students to the biochemical techniques commonly used in the study of biological materials. Various assay methods, chromatography, electrophoresis, and use of the scintillation counter are taught. Students work in small groups and rotate through three modules. An enzymology module teaches methods used in protein isolation, purification, the study of enzyme kinetics and of enzyme characterization. In the nucleic acids module, students are introduced to recombinant DNA methodology and isolating and studying some of the properties of calf thymus DNA. In the fall, the third module is a study of lipids. Students isolate and purify lipids from a source of individual choice, quantify the material for lipid content and degree of fatty acid saturation, identify the various lipids by thin layer chromatography, and analyze for phosphate and cholesterol content. During the spring term, the third module introduces students to techniques used in the clinical laboratory. Methods used in blood and urine analyses are applied to the students' own samples; some nutritional assays are done for protein and vitamin content of foods.

## BIOBM 432 Survey of Cell Biology

Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades optional for graduate students only.

Lecs, M W 11:15-12:30. W. J. Brown and staff.
A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437; BIOGD 483: BIOBM 632, 636, and 639.

## BIOBM 435-436 Undergraduate

 Biochemistry Seminar435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOBM 330 or 333 or 331 and 332 or written permission of instructor. S-U grades only.

Sem to be arranged. Organizational
meeting first W of each semester at 4 p.m. Fall: G. P. Hess; spring: Staff. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

## BIOBM 437 Oncogenes and Cancer Viruses

Fall. 3 or 4 credits ( 4 credits for participation in the writing component of the course). Undergraduates are required to do the 4 -credit option. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281. S-U grades optional, with permission.

Lecs, T R 12:20-1:35; disc, W 7:30 p.m. D. I. Shalloway.

The use of animal cells in culture as an experimental system for studying the cellular mechanisms involved in carcinogenesis through the use of recombinant DNA and biochemical methods. Topics include immortalization of cells, the cell cycle, differences between normal and neoplastically transformed cells, growth factors, molecular biology and biochemistry of cancer viruses, and structure and function of viral and cellular oncogenes. Understanding of relevant experimental techniques, experimental design and comprehension of primary research literature is emphasized. This is not a sunvey course; it is designed primarily for students planning a career in research. A series of exercises to develop scientific writing skills are required for undergraduate students except by special permission. Depending on availability, graduate students may also participate in this writing component. Four credits are given when the writing component is included.

## BIOBM 438 Yeast Genetics and

 Molecular BlologySpring. 2 credits. Prerequisites: BIOGI) 281 and BIOBM 330 or 332 or 333 , or permission of instructor. S-U grades optional. Offered alternate years.

Lec W 8-9:55 p.m. B. K. Tye. An advanced overview of genetic studies in yeast, primarily Saccharomyces cerevisiae. Special attention is given to the use of yeast as a model for studying problems in cell biology in eukaryotes. Both genetic and molecular approaches to selected problems of biological interest are discussed.

## BIOBM 630 Laboratory in Cell Biology

Spring. 4 credits. Enrollment limited. Prerequisites: Either BIOBM 330 or 333 or 332 and concurrent enrollment in 331, or a course in cell biology, and permission of instructor obtained by negistering in 258 Biotechnology Building with J. Gibson.

Labs, M W 1:25-4:25 or R 9:05-4:25; disc
to be arranged. J. Gibson, B. Tyler. The course emphasizes approaches to experimental design and theory of experimental techniques as well as providing experience in handling and experimenting with cells of different kinds. Limited numbers of vertebrate animals are used for two experiments where no alternative approach exists.

## BIOBM 631 Protein Structure and Function

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, physical chemistry, and organic chemistry. S-U grades optional Lecs, M W F 9:05. P. A. Karplus Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

## [BIOBM 632 Membranes and Bioenergetics

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Not offered 1994-95.

Lecs, T R 11:15. P. C. Hinkle.
Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria.]

## BIOBM 633 Biosynthesis of

## Macromolecules

Fall. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332. Recommended: BIOGD 281.

## Lecs, T R 9:05. J. W. Roberts,

D. B. Wilson.

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

## BIOBM 635 Enzymes, Coenzymes, and Metabolic Regulation (also

## Nutritional Sciences 635)

Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and Chem 358 or 360 , or permission of instructor. Offered alternate years.

Lecs, T R 9:05. M. N. Kazarinoff.
Lectures on the identification and characterization of regulatory steps in metabolism, considered from both theoretical and practical aspects. The intracellular mechanisms of regulation are emphasized, with specific examples in mammalian metabolism examined in detail.

## BIOBM 636 Cell Biology

Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 , and 432 , or their equivalents.

Lec, T 9:05-11:00. A. P. Bretscher. Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with BIOBM 632 and 639, this course provides broad coverage of the cell biology subject area.

## [BIOBM 637 Integration and

Coordination of Energy Metabolism (also Nutritional Sciences 636)
Fall. 3 credits. Prerequisite: BIOBM 330 or 331 or 333 or equivalent. Not offered 1994-95.

Lecs, M W F 9:05. Evening prelims to be arranged. W. J. Arion.
The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with
physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in vivo are analyzed in the contexts of selected physiologic and pathologic stresses.]

## BIOBM 638 Intermediate Biochemical

 MethodsFall or spring. 4 credits. Limited to 24 students. Prerequisite: Either BIOBM 330 or 333 or 332 and concurrent enrollment in 331 or equivalent biochemistry course. Primarily for graduate students minoring in the field of Biochemistry, Molecular and Cell Biology, and undergraduates in the biochemistry program of study. Admission to the course requires an interview with the instructor or the teaching support specialist ( $\mathrm{x} 5-8072$ ). There is no admission to the course without the interview. Students are urged to schedule their interviews at least 3 weeks before the start of classes. May not be taken for credit after BIOBM 430.

Lab, T 9:05-4:25 (fall); lab, T or R 9:05-
4:25 (spring). V. M. Vogt and staff. Selected experiments on proteins (purification, enzymology, methods of detection) and DNA (cloning, restriction mapping, sequencing, PCR). The course emphasizes quantitative aspects as well as experimental design in modern biochemical research

## BIOBM 639 The Nucleus

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Recommended: BIOGD 281

Lec, M 7:30-9:25 p.m. J. T. Lis. Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 632 and 636, provides broad coverage of the cell biology subject area

## BIOBM 648 Plant Biochemistry

Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 , organic chemistry, and a course in plant physiology. Offered alternate years.

Lecs, M W F 9:05. A. T. Jagendorf,
R. L. Last, T. G. Owens.

Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

## BIOBM 692 Protein-Nucleic Acld

 Interactions (BIOMI 692)Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and 633.

Lecs, T R 10:10-11:25. J. D. Helmann. The physical and chemical bases of proteinnucleic acid interactions are explored including both theory and specific examples Proteins considered include: bacterial nonspecific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

## BIOBM 732-737 Current Topics in

 BiochemistryFall or spring. $1 / 2$ or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

## BIOBM 738 Macromolecular

Crystallography (also Chemistry 788) Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years.

Lecs, M W F 10:10. S. A. Ealick,
P. A. Karplus, J. C. Clardy.

Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the 3 -dimensional structures of macromolecules. These include crystallization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

BIOBM 750 Cancer Cell Biology (also Veterinary Pathology 750)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent.

Lecs to be arranged. J. Guan, R. Levine,
B. Pauli, D. Shalloway, A. Yen. This course focuses on the role of oncogenes, tumor suppressor genes, extracellular matrix and cell surface adhesion receptors in tumorigenesis and tumor progression. The course is taught in large part from the contemporary literature. Course topics include cell proliferation and oncogenes, regulatory effects of cell-substrate and cell-cell interactions, and angiogenesis, invasion, and metastasis.

BIOBM 751 Ethical Issues and Professional Responsibilities (also Toxicology 751 and Science and Technology Studies 751)
Fall or spring. 1 credit. Limited to graduate students beyond first year. S-U grades only. Sem, 2:30-4:15 (ten weeks). Additional
sections may be offered. Organizational
meeting W 3:35 (Fall: 8/31; spring: 1/25).
J. Fessenden MacDonald.

Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual properties; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

## BIOBM 830 Blochemistry Seminar

Fall or spring. No credit.
Sem, F 4:30. Staff.
Lectures on current research in biochemistry, presented by distinguished visitors and staff members.

## BIOBM 831 Advanced Blochemical

 Methods IFall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional.

Labs and discs, 12 hours each week to be arranged. Organizational meeting first $R$ of semester, 10:10. B. Tyler and staff. This course emphasizes experimental design and the concepts implicit in current ap-
proaches to research in biochemistry and cell biology. Students are required to read papers and participate actively in discussions in order to design their own protocols before performing experiments using the techniques most common in the recent literature of these fields.

## BIOBM 832 Advanced Blochemical

 Methods IISpring 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only.

Lab to be arranged. Staff (coordinator:
J. M. Calvo, graduate faculty representative).
Research in the laboratories of two or three different professors chosen by the student. Arrangements are made jointly between the graduate field representative and the research adviser.

## BIOBM 833 Research Seminar in

 BiochemistryFall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only.

Sem, T 5-6:30 p.m. T. C. Huffaker,
W. J. Brown, J. T. Lis.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.
BIOBM 835-836 Methods and Logic in Biochemistry, Molecular and Cell Biology
835, fall; 836, spring. 1 credit each term. Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc to be arranged. Fall:
S. E. Ealick, G. P. Hess; spring:
T. C. Huffaker.

A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

## Related Courses in Other Departments

Lipids (Biological Sciences [BIOAP] 619 and Nutritional Sciences 602)

Molecular Aspects of Development (Biological Sciences [BIOGD] 483)

Molecular Mechanisms of Hormone Action (Biological Sciences [BIOAP] 658 and Velerinary Medicine 758)
Teaching Experience (Biological Sciences [BIO G] 498)

Undergraduate Research in Biology (Biological Sciences [BIO G] 499)

## ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

## BIOES 154 The Sea: An Introduction to

 Oceanography (also Geological Sciences 104)Spring. 3 credits. S-U grades optional, with permission of either instructor

Lecs, M W 11:15; lab, M or W 7:30-10 p.m or MTWR or F 2-4:25. Evening prelims: Feb. 23 and Apr. 6. C. H. Greene,
A. L. Bloom.

The oceans remain one of the last frontiers, yet they affect our everyday lives in many subtle ways. This course surveys what is known of the physics, chemistry, geology, and biology of the oceans. Topics include seafloor spreading and plate tectonics; geology and biology of mid-ocean ridges; biological and geological control on the chemistry of seawater; ocean currents and circulation; the oceans and climate, including El Niño, the greenhouse effect, and the Ice Ages; ecology of open-ocean, ocean-bottom, and near-shore communities; coastal processes; marine pollution and waste disposal; mineral and biological resources of the sea; and Law of the Sea. At the level of Scientific American.

## BIOES 261 Ecology and the Environment

 Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional.Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or $3: 35$. Evening prelim: Oct. 6.
T. E. Dawson, R. B. Root.

An introduction to principles of ecology concerning the interactions between organisms and their environment. The course deals with both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual population, community, and ecosystem levels of organization are discussed. These principles are extensively applied to current environmental problems and issues.

## BIOES 263 Field Ecology

Fall. 2 credits. Limited to 20 students Prerequisite: concurrent or previous enrollment in BIOES 261.

Lec, R 1:25; lab, F 12:20-5. One weekend field trip to the Hudson Valley. Small fee for field trip. R. B. Root.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

## [BIOES 272 Functional Ecology: How

 Animals WorkSpring. 4 credits. Enrollment limited to 60 students ( 15 per laboratory section); preference given to sophomores and juniors. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1994-95.

Lecs, M W F 9:05; lab, M T W or R 1:25-
4:25. Fee, $\$ 15$. Staff.
An introductory course for students interested in organismal biology. The features of the physical environment that are important to insects and vertebrates are used to illustrate the interaction of physiological, behavioral, and morphological characteristics in organismal activity and homeostasis. Laboratories include a survey of the diversity of endothermal and ectothermal animals, ecophysiological measurements, and measurements of important environmental parameters in local habitats. This course uses live and preserved vertebrate animals for field observations and laboratory exercises.]

## BIOES 274 Functional and Comparative

 Morphology of VertebratesSpring. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years. Lecs, M W F 12:20; labs, M T or W 1:254:25. Evening prelims Feb. 23, Apr. 6, and May 4. Fee, \$15. D. K. McClearn. An exploration of the relations between form and function in biological systems with an emphasis on trends in vertebrate evolution. Lectures integrate data from topics such as locomotion, feeding, size, and scaling with issues of historical importance and current interest (e.g., correlation of body parts, adaptationist explanations, developmental constraints, criteria for determining biomechanical and energetic "efficiency"). Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations (motion analysis, surface electrode, and force-plate recordings).

## [BIOES 275 Human Biology and

 Evolution (also Anthropology 275 and Nutritional Sciences 275)Fall. 3 credits. S-U grades optional, with permission of either instructor. Offered alternate years. Not offered 1994-95.

Lecs, W F 10:10; disc, M 10:10.
K. A. R. Kennedy, J. D. Haas. An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of longterm evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.]

## [BIOES 371 Human Paleontology (also

 Anthropology 371)Fall. 4 credits. Prerequisite: one year of introductory biology or Anthr 101 or permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W F 2:30; lab, one hour each
week to be arranged; occasional field trips.
K. A. R. Kennedy.

A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.]

## [BIOES 373 Biology of the Marine

 InvertebratesFall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1994-95.

Lecs, M W F 10:10; lab, W 1:25-4:25;
1 optional weekend field trip to Shoals
Marine Laboratory. $\$ 60$ fee for optional
field trip. C. D. Harvell.
An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals field trip is an
excellent opportunity to study representatives of most of the major phyla in their natural habitat. Laboratory demonstrations on campus involve live marine and freshwater invertebrates.]

## BIOES 378 Evolutionary Biology

Spring. 4 credits. Limited to 300 students. Prerequisite: one year of introductory biology or permission of instructor. S-U grades optional. This course is undergoing major revisions that were not ready at press time; please check your fall registration packets or go to the Office for Academic Affairs, 200 Stimson Hall for up-io-date information.

Lecs, M W F 10:10; disc, 1 hour each week to be arranged. Evening prelims: Mar. 2 and Apr. 6. R. G. Harrison.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction.

## BIOES 452 Herblvores and Plants: Chemical Ecology and Coevolution (also Entomology 452)

Spring. 3 credits. Prerequisites: One year of introductory biology, BIOES 261, Chem 253 or $357 / 358$ and 251 or 301 , or permission of instructor. S-U grades optional. Offered alternate years.

Lecs, M W 11:15; disc, F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of $F$ disc P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; and implications for human food and agriculture.

## [BIOES 455 Insect Ecology (also

 Entomology 455)Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and Entom 212 or knowledge of another taxon. Offered alternate years. Not offered 1994-95.

Lecs, W F 11:15; disc, M 11:15. R. B. Root. Topics include the nature and consequences of biotic diversity, BIO Geography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.]

## BIOES 456 Stream Ecology (also Entomology 456)

Spring. 4 credits. Recommended: BIOES 261. S-U grades optional, with permission of instructor.

Lecs, T R 9:05; labs, T W or R 1:25-4:25.
Field project with term paper.
B. L. Peckarsky, M. B. Bain.

Lectures address the question: How does flow influence the patterns and processes occurring in stream ecosystems? Patterns include channel structure and formation, chemical suspension and dissolution,
watershed influences, and plant, invertebrate, and fish community structure. Processes include nutrient cycling and downstream transport, trophic dynamics, plant and animal colonization and succession, community dynamics, conservation, and the impacts of natural and anthropogenic disturbances. Laboratory: a field project is designed to teach descriptive and experimental techniques and to test hypotheses related to stream environmental assessment.

## BIOES 457 Limnology: Ecology of Lakes,

 LecturesFall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Offered alternate years.

Lecs, M W F 11:15. N. G. Hairston, Jr. The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrients, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

## BIOES 459 Limnology: Ecology of Lakes, Laboratory

Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Offered alternate years.

Lab, T W or R 1:25-4:25; 1 weekend field trip. Fee, \$10. N. G. Hairston, Jr. and staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip

## BIOES 461 Population and Evolutionary

 EcologySpring. 4 credits. Prerequisites: BIOES 261 or 378 plus two semesters of calculus, or permission of instructor. S-U grades optional. Offered alternate years.

Lecs, M W F 9:05; lab, M or T 1:25-4:25.
D. W. Winkler, A. S. Kondrashov. Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness definition by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

## BIOES 462 Marine Ecology

Spring. 3 credits. Prerequisite: BIOES 261 Offered alternate years.

Lecs and disc, M W F 10:10. C. D. Harvell. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology.

## BIOES 463 Plant Ecology and Population

 Biology, LecturesFall. 3 credits. Prerequisite: BIOES 261 or 378 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Offered alternate years Lecs, M W F 11:15. M. A. Geber, P. L. Marks.

This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered first. Plant populations are then studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

## [BIOES 464 Microevolution and

 Macroevolution (also Entomology 464)Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 378 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1994-95. Next offered spring 1996, and alternate spring semesters thereafter.

Lecs, T R 10:10-11:30; disc, 1 hour each
week to be arranged. A. R. McCune,
S. Via.

An advanced course in evolutionary biology integrating macroevolutionary and microevolutionary approaches. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction in populations and higher taxa, the origins and fate of variation, and causes of major evolutionary transitions. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.!

## BIOES 465 Plant Ecology and Population

 Biology, LaboratoryFall. 1 credit. Prerequisite: concurrent enroilment in BIOES 463. Offered alternate years.

Lab, F 12:05-5. M. A. Geber, P. L. Marks. Laboratory and field exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on simple data analysis.

## [BIOES 466 Physiological Plant Ecology, Lectures

Spring. 3 credits. Limited to 35 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10-11:25. T. E. Dawson. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.]

## [BIOES 468 Physiological Plant Ecology, Laboratory

Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Not offered 1994-95

Lab, T 1:25-4:25, plus additional lab hours to be arranged; 1 weekend field trip required. Fee, $\$ 15$. T. E. Dawson. A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/ week in additional lab time for this course.)

## BIOES 470 Ecological Genetics (also

 Entomology 470)Spring. 4 credits. Prerequisite: BIOES 378 or permission of instructor. S-U grades optional. Offered alternate years.

Lecs, T R 10:10-11:30; disc, 1 hour each
week to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

## [BIOES 471 Mammalogy

Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W F 9:05; lab, M T or W 1:25-4:25;
1 weekend field trip required. Carpooling
to the Vertebrate Collections at Research
Park is necessary several times during the
semester. Fee, \$15. D. K. McCleam.
Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

## [BIOES 472 Herpatology

Spring. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, T R 12:20; labs, M W or T R 1:25-
4:25; occasional field trips and special projects. Fee, $\$ 15$. Staff.
Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are used in the laboratory for non-
destructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.)

## BIOES 473 Ecology of Agricultural

 Systems (also Soil, Crop, and Atmospheric Sciences 473)Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years.

Lecs and discs, T R 2:30-3:45. During the first 6 weeks of class the Thursday meetings may run to $5: 00$ because of field trips. A. G. Power, T. W. Scott. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.
BIOES 474 Laboratory and Field Methods in Human Blology (also Anthropology 474)

Spring. 5 credits. Limited to 16 students with permission of instructor obtained by preregistering in E231 Corson. Prerequisite; one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years.

Lecs and labs, T R 10:10-12:05; additional hours to be arranged. Independent research project required.
K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist. There is a dissection of a profused (dead) nonhuman primate, usually a macaque or baboon Students attend demonstrations of the dissection prepared by the presector (a hired graduate student).

## BIOES 475 Ornithology

Fall. 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E241 Corson. Recommended BIOES 274. S-U grades optional, with permission of instructor. Offered altemate years.

Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research
Park is necessary once a week. Fee, $\$ 15$.

## D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and BIO Geography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

## BIoEs 476 Blology of Fishes

Fall. 4 credits. Limited to 24 students Recommended: BIOES 272 or 274 or equivalent experience in vertebrate zoology

S-U grades optional, with permission of instructor. Offered alternate years. Lecs, M W F 10:10; lab, M 1:25-4:25. A small lab fee may be required. A. R. McCune.

An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

## BIOES 478 Ecosystem Biology

Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Offered alternate years.

Lecs and discs, T R 10:10-12:05.
R. W. Howarth, L. O. Hedin. Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective

## [BIOES 479 Paleobiology (also

 Geological Sciences 479)Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 272 or 274, GEOL 375, BIOES 373, or permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W F 12:20. J. L. Cisne and staff. A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.]
[BIOES 660 Field Studies in Ecology and Systematics
Spring. Variable credit. Prerequisites: BIOES 261, a taxon-oriented course, and permission of instructor. Estimated cost of room and board (exclusive of transportation) to be announced. Not offered 1994-95.

Lecs and labs to be arranged. R. B. Root, P. L. Marks.

This course provides students an opportunity to learn techniques and a new biota by participating in an intensive series of field exercises. An extended field trip is scheduled during either intersession or spring break. The region visited, trip objectives, and other details are announced by the instructor in charge in the division's catalog supplement issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.]

BIOES 661 Environmental Policy falso ALS 661 and Biology and Society 461)

Fall and spring. 3 credits each term.
(Students must register for 6 credits each term, since an " $R$ " grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor.

Sem, R 2:30-4:30. D. Pimentel.
This course uses an interdisciplinary approach to focus on complex environmental and energy problems. Ten to twelve students, representing several disciplines, investigate
significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.
[BIOES 662 Mathematical Ecology (also Statistics and Biometry 662)
Spring. 3 credits. Prerequisites: one year of calculus and a course in statistics. Recommended: a general ecology course. S-U grades optional, with permission of instructor Offered alternate years. Not offered 1994-95. Lecs, M W F 12:20. C. Castillo-Chavez and staff.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis. Deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, simulation, and analytical techniques.]

## [BIOES 664 Seminar in Insect-Plant

 Interactions (also Entomology 684)Spring. 2 credits. Intended for seniors and graduate students. Limited to 15 students. Prerequisites: courses in entomology, ecology, evolution, and organic chemistry and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

Sem to be arranged. Staff.
Presentations and discussions by students on the evolution of patterns of interaction between plants and insects, emphasizing critical evaluation of concepts and evidence.]

## [BIOES 665 Limnology Seminar

Spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1994-95.

Sem to be arranged. N. G. Hairston, Jr. A seminar course on advanced topics in freshwater ecology.]

## [BIOES 668 Principles of Biogeochemistry

Spring. 4 credits. Limited to 20 students Prerequisite: solid background in ecology, environmental chemistry, or related environmental science. Permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs and discs, T R 10:10-12:05.
R. W. Howarth

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.]
[BIOES 669 Plant Ecology Seminar
Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Not offered 1994-95

Sem to be arranged. Staff. Includes review of current literature, student research, and selected topics of interest to participants.]

BIOES 670 Graduate Seminar in Vertebrate Biology
Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only.

Sem to be arranged. Staff.
Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

## [BIOEs 672 Graduate Seminar in

 Physiological EcologySpring. 2 credits. Limited to 12 students. Prerequisite: a course in plant or animal physiology, especially BIOES 466 or 467 Permission required for undergraduates. May be repeated for credit. S-U grades only Offered alternate years. Not offered 1994-95.

Sem, 2 hours each week to be arranged.
T. E. Dawson and staff.

Discussion of topics on water balance, energetics, and temperature regulation emphasize parallels and contrasts in the relations of animals and plants to their biophysical environments. Each student leads a discussion and prepares a written review of a topic, drawing on the primary literature of his or her own research interests.]

## BIOES 673 Human Evolution: Concepts,

 History, and Theory (also Anthropology 673)Fall. 3 credits. Prerequisite: one year of introductory biology, Anthr 101, or permission of instructor. Offered altemate years.

Lec, M 2:30; sem and disc, W 7:30-9:30 p.m. K. A. R. Kennedy.

The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature

## [BIOES 674 Principles of Syatematics

 (also Entomology 674)Spring. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. Recommended: an introductory biological systematics course. Offered alternate years. Not offered 1994-95.

Lecs, discs, and labs, M W 1:25-4:25
Q. D. Wheeler and staff.

An introduction to modern theory and methods of systematic biology. Lectures are on theoretical systematics and include species concepts, classification, phylogenetics, and BIO Geography. Laboratories include modern methods of analysis of data, including cladistic hand and computer methods and numerical methods. Laboratory grade is based in part on a final paper.]

## BIOES 760 Special Topics in Evolution

 and EcologyFall or spring. $1-3$ credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor.

Hours to be arranged. Staff.
Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

## BIOES 767 Current Topics in Ecology

 and Evolutionary BiologyFall. 4 credits. Prerequisites: BIOES 261 and 378 or their equivalents. S-U grades optional Lecs and discs, T R 10:10-12:05. One weekend field trip. R. G. Harrison and staff.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance

## GENETICS AND DEVELOPMENT (BIOGD)

## BIOGD 184 Understanding Genetics

Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282 . This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group $B$ distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any Program of Study in the biological sciences major. S-U grades optional.

Lecs, M W F 9:05. T. D. Fox
An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future
applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetics methods to alter the properties of organisms and the influence of inheritance on behavior.

## BIOGD 281 Genetics

Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introduc tory biology or equivalent; written permission of instructor required for students who have taken BIOGD 282. No admittance after first week of classes.

Lecs, T R 10:10-12:05; lab, T W or F 2:304:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes
T. D. Fox, M. L. Goldberg, R. J. MacIntyre. A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genetic aspects of differentiation, genes in populations, breeding systems, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

## BIOGD 282 Human Cenetics

Spring. 2 or 3 credits ( 2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. S-U grades optional.

Lecs, M W 10:10 (lecs, also F 10:10 1st 3 weeks only); disc, R 10:10 or F 10:10 or

## 11:15. R. A. Calvo.

A course designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

## BIOGD 385 Developmental Biology

Fall. 3 credits. Prerequisite: BIOGD 281 Lecs, M W F 11:15. K. J. Kemphues. An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

## [BIOGD 389 Embryology

Spring or summer. 3 credits. Limited to seniors. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Not offered 1994-95.

Lecs, T R 10:10; labs, T R 2-4:25.
A. W. Blackler

A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue level. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy. Preserved materials are used in the laboratory.]

## BIOGD 481 Population Genetics

Fall. 4 credits. Prerequisite: BIOGD 281,
BIOES 378, or equivalents.
Lecs, M W F 10:10; disc, M 2:30 or T 1:25.
C. F. Aquadro.

Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

## BIOGD 482 Human Genetics and Society

 Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 331 and 332. S-U grades optional.Disc, T 2:30-4:25 and R 2:30-3:30.
R. A. Calvo, H. T. Stinson.

Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are new reproductive strategies, eugenics, genetic counseling, genetic screening (prenatal, neonatal, presymptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead most discussions. There is a major writing component in the course.

## BIOGD 483 Molecular Aspects of

 DevelopmentSpring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred) or 330 or 333; and BIOGD 385. Offered alternate years.

Lecs, T R 10:10-11:25. M. F. Wolfner. An examination of the molecular biology of developing systems, with emphasis on the genomic, transcriptional, post-transcriptional, translational, and post-translational mechanisms involved in regulating development. Both prokaryotic and eukaryotic systems are considered, but emphasis is on the latter. Topics to be discussed include changes in chromatin structure, DNA rearrangements, control of RNA synthesis and processing, translational controls, nucleo-cytoplasmic interactions, and genetic responses to hormone treatment. The regulation of selected developmental systems is considered in detail.

## [BIOGD 484 Molecular Evolution

Spring. 3 credits. Prerequisites; BIOGD 281 and organic chemistry. Offered alternate years. Not offered 1994-95.

Lecs, T R 11:15. R. J. MacIntyre. An analysis of evolutionary changes in proteins and nucleic acids. Theories on the evolution of the genetic code and the
construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.]

## BIOGD 485 Microbial Genetics (BIOMI 485)

Fall. 2 credits. Limited to upperclass and graduate students. Prerequisite: BIOGD 281 Recommended: BIOMI 290 and BIOBM 330 or 331 and 332 or 333 . S-U grades optional.

Lec, W 7:30-9:25 p.m. V. J. Stewart. Concepts and principles of formal genetic analysis as applied to microorganisms, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination, and mapping; complementation; transposons; suppression, including allele-specificity; epistasis; genome organization and dynamics; and gene expression and regulation.

## [BIOGD 682 Fertilization and the Early Embryo

Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred), 330 or 333; and BIOGD 385. Offered alternate years. Not offered 1994-95.

Lec, R 2:30-4:25. M. F. Wolfner. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization, pronuclear fusion, triggering mitosis, cleavage divisions, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture, and midblastula transition.]

## BIOGD 684 Advanced Topics in Population Genetics

Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years.

Lec, T 2:30-4:25. C. F. Aquadro. An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

## [BIOGD 686 Mammalian Development

Spring. 3 credits. Limited to 25 students. Prerequisites: BIOGD 281, BIOBM 330 or 332, and BIOGD 385, or their equivalents. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10-11:25. W. H. Mark. An in-depth study of mammalian development using the mouse as the animal model. The course covers classical embryology beginning with gametogenesis followed by morphogenetic and biochemical analyses of pre- and post-implantation development. Current topics in experimental embryology, including genetic analysis of mutants, study of cell lineage with chimeras, in vitro culturing of embryonic stem cells, and molecular approaches to understanding development are examined.]
BIOGD 687 Developmental Genetics
Fall. 2 credits. Limited to 20 students. Prerequisites: B1OGD 281 and 385 or their equivalents. S-U grades optional. Offered alternate years.

Lec to be arranged. K. J. Kemphues. Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in Drosophila, Caenorbabditis, and mouse. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are given the opportunity to discuss each topic in class.

## BIOCD 780 Current Topics in Genetics

Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor.

Sem to be arranged. Staff.
A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

## BIOQD 781 Problems in Genetics and Development

Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development.

Disc to be arranged. Staff.
An introduction to the research literature in selected areas through weekly problem sets and discussions.

## BIOCD 782-783 Current Genetics/

 Development TopicsFall or spring. $1 / 2$ or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced.

## BIOGD 786 Research Seminar in

 Genetics and DevelopmentFall and spring. 1 credit. Required of second, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20-1:30. Staff.
Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

## BIOGD 787 Seminar in Genetics and

 DevelopmentFall or spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only.

Sem, M 4-5. Staff.
Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

## MICROBIOLOGY (BIOMI)

## BIOMI 192 Microorganisms on the Planet

 EarthSpring. 3 credits. S-U grades optional. Lecs, M W F 11:15. R. P. Mortlock. A course in microbiology designed to introduce students who have a limited background in science. The course introduces students to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archeae, some of the microeukaryotes, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology and should not be taken for credit after BIOMI 290.

## BIOMI 290 General Microbiology,

 LecturesFall, spring, or summer ( 6 -week session). 2 or 3 credits ( 2 credits if taken after BIOMI 192). Prerequisites: one year of introductory biology for majors and Chem 104 or 208, or equivalent. Recommended: concurrent registration in BIOMI 291.

Lecs, M W F 11:15. M. L. Cordts,
S. M. Merkel.

A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. The biology of eukaryotic microorganisms and viruses is also discussed briefly. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and immunology and medical microbiology.

## BIOMI 291 General Microbiology,

 LaboratoryFall or spring, 2 credits. Summer (6-week session), 2 or 3 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290.

Labs, M W 2-4:25, or T R 11:15-1:45 or 2-4:25. C. M. Rehkugler.
A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

## BIOMI 292 Ceneral Microblology,

## Discussion

Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only.

Disc to be arranged. C. M. Rehkugler,
E. Seacord.

A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 300 Seminar in Microbiology
Spring. 1 credit. Required of biological science students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only.

Sem, W 12:20. Staff.
A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

## [BIOMI 304 Pathogenic Bacteriology and Mycology (also Veterinary Microbiology 318)

Spring. 2 or 4 credits ( 4 credits with lecture and laboratory). Limited to 40 students. Prerequisites: BIOMI 290 and 291. Strongly recommended: BIO G 305. Offered altemate years. Not offered 1994-95.

Lecs, T R 1:25; labs, T R 2:25-5.
E. Tullson.

The study of the major bacterial and fungal agents of infectious disease, with emphasis on the function of virulence mechanisms and the host-parasite interaction. Lectures cover the significance of normal flora, antibiotic therapy and drug resistance, and vaccine development. Laboratories emphasize techniques for isolation, culture, and identification of infectious agents. Animal models are used to help understand certain pathogenic mechanisms.]
BIOMI 305 Basic Immunology, Lectures (BIO G 305) (also Veterinary Microblology 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and gentics. S-U grades optional, with permission of instructor.

Lec, T R 8:30-9:55. Evening prelims: Sept. 22 , Oct. 13, and Nov. 10. A. J. Winter. A survey of immunology, with emphasis on the biological functions of the immune response.

## BIOMI 391 Advanced Microbiology

 LaboratoryFall. 3 credits. Prerequisites: BIOMI 290. 291 , and BIOBM 330 or 331 or 333. Preference given to biological sciences students in the microbiology program of study.

Lab, M W or T R 1:25-4:25; disc, F 1:25.
J. B. Russell and staff.

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology,
2) physiology, 3) genetics, and 4) structure and function. Students select a topic from one of the modules and conduct a two-week independent experiment at the end of the semester.

## BIOMI 398 Environmental Microbiology (also Soil, Crop, and Atmospheric Sciences 398)

Spring, 3 credits, Prerequisite: BIOES 261 or BIOMI 290 or SCAS 260 or permission of instructor. Offered alternate years.

Lecs, M W F 10:10. W. C. Ghiorse, E. L. Madsen.

Behavior and function of microorganisms in natural environments and the role of microorganisms in ecologically significant processes including nutrient cycling and the transformation of pollutants.

## BIOMI 406 Clinical Microbiology

Fall and spring. 15 credits each semester. Prerequisite: permission of instructor

Hours to be arranged. R. P. Mortlock. Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology. This is a full-time program, taking place from September to August of the student's senior year.
BIOMI 408 Viruses and Disease (Bio G 408) (also Veterinary Microbiology 417)

Spring. 3 credits. Prerequisites: BIOMI 290, 291; Bio G 305; and permission of instructor. Recommended: BIOGD 281.

Lecs, M W 7:30 p.m. J. Casey
The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasis are highlighted in the context of approaches to prevent or reduce the severity of diseases.
BIOMI 415 Bacterial Diversity, Lectures Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOBM 330 or 331 or 333.

Lecs, M W F 11:15. S. H. Zinder A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

## BIOMI 416 Microbial Physiology,

 LecturesSpring. 3 credits. Prerequisites: BIOMI 290, 291 , and BIOBM 330 or 331 or 333 , or their equivalents. Recommended: BIOMI 415. S-U grades optional for students not specializing in the microbiology program of study.

Lecs, M W F 11:15. J. P. Shapleigh The concern is with the physiological and metabolic functions of microorganisms. Consideration is given to chemical structure, regulation, growth, and the energy metabolism of prokaryotic organisms. Special attention is given to those aspects of microbial metabolism and carbohydrate catabolism not normally studied closely in biochemistry courses.

## [BIOMI 451 Structure and Function of

 Bacterial CellsFall. 3 credits. Prerequisites: BIOMI 290 and BIOBM 330 or 331 or 333 or permission of instructor. Recommended. BIOMI 415 . S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, M W F 10:10. W. C. Ghiorse. Morphology, ultrastructure, macromolecular organization, and life cycles of bacterial cells are considered with regard to chemical composition and physiological and ecological function of cellular components.]

## BIOMI 485 Microbial Genetics

Fall. 2 credits. Limited to upper-class and graduate students. Prerequisite: BIOGD 281 Recommended: BIOMI 290 and BIOBM 330 or 331 or 333. S-U grades optional.

Lecs, w 7:30-9:25 p.m. V. J. Stewart Concepts and principles of formal genetic analysis as applied to microorganisms, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation; transposons; suppression, including allele-specificity; epistasis; genome organization and dynamics; and gene expression and regulation.

## BIOMI 652 (Section 04) Molecular

 Plant-Microbe Interactions (BIOPL 652, Sec 04)Spring. 1 credit. Prerequisites: BIOGD 281,
BIOBM 330 or 331 or 333 , and BIOPL 653 (section 01) or their equivalents. S-U grades optional.

Lecs, M W F 10:10 (12 lecs) Mar. 29-Apr.
24. S. C. Winans, T. A. LaRue.

Course focuses on the interactions of Agrobacteria and Rbizobia with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis, and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization and function of the sym plasmid, nodule development, and plant genetics involved in plantmicrobe interaction.

## BIOMI 692 Protein-Nucleic Acid

## Interactions

Spring. 3 credits. Prerequisites: BIOBM 330 or 331 or 333 and 633.

Lecs, T R 10:10-11:25. J. D. Helmann. The physical and chemical bases of proteinnucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial nonspecific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

## BIOMI 694 Genetics of Diverse Bacteria

Spring. 3 credits. Prerequisite: BIOMI 485 or equivalent.

Lecs, M W 2:30-3:45. S. C. Winans Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.
BIOMI 795-796 Current Topics in
Microbiology
Fall, 795 ; spring, $796.1 / 2$ or 1 credit for each
topic. May be repeated for credit. Designed
primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only.

Lecs to be arranged. Staff.
Lectures and seminars on special topics in microbiology.

## BIOMI 797 Graduate Seminar in

 MicrobiologyFall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only.

Sem to be arranged. Staff.
BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only.

Sem to be arranged. Staff.
A seminar relating to the research activities of those enrolled. Students who have completed the Bio S 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

## BIOMI 799 Microbiology Seminar

Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested.

Sem to be arranged. Staff.

Plant Virology (Plant Pathology 645)

## NEUROBIOLOGY AND BEHAVIOR (BIONB)

## BIONB 221 Neurobiology and Behavior I: Introduction to Behavior

Fall. 3 or 4 credits ( 4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior, Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional.

Lecs, M W F 12:20; disc to be arranged.
S. T. Emlen and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hommonal mechanisms of behavior.
BIONB 222 Neurobiology and Behavior II: Introduction to Ne urobiology
Spring. 3 or 4 credits ( 4 credits with discussion and written projects). 4 -credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year of introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional

Lecs, M W F 12:20; disc to be arranged. R. M. Harris-Warrick.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory.

## BIONB 322 Hormones and Behavior (also Psychology 322)

Spring. 3 or 4 credits; the 4 -credit option involves a one-hour section once a week, in which students are expected to read original papers in the field andparticipate in discussion. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: one year of introductory biology, BIONB 221 or 222 or a course in psychology S-U grades optional.

Lecs, M W F 11:15; disc to be arranged. D. Gudermuth.

Following a review of the neural and endocrine systems, this course connects endocrine physiology to specific behaviors observed in various species, including humans. Although the relationship between sexual physiology and behavior is strongly emphasized, the lectures also describe hormonal contributions to parental behavior, aggression, stress, leaming and memory, homeostasis, and biology rhythms. Topics for the discussion sections are chosen by the students within the context of homonal influences on behavior.

## BIONB 324 Biopsychology Laboratory (also Psychology 324)

Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BIONB 221 and 222 or Psych 123 and 222; and permission of instructor.

Labs, T R 1:25-4:25. T. J. DeVoogd. Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

## BIONB 325 Neurodiseases - Molecular

 AspectsFall. 3 credits. Prerequisites: Two of the following three courses: BIONB 222, BIOGD 281, or BIOBM 330 or 331; co-registration in one of two is acceptable. S-U grades optional Offered alternate years.

Lecs, T R 9:05; disc, T 2:30. T. R. Podleski. The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example,
Alzheimer's, Huntington's, color blindness, affective disorders, disorders affecting ion channels, and muscular dystrophies. In addition to the molecular studies, when appropriate, time is devoted to discussions of other aspects of the diseases. Emphasis is placed on how these studies provide a useful approach to studying the nervous system by exposing the functions of genes that would be difficult to identify in other ways.

## [BIONB 326 The Visual System

Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Offered altemate years. Not offered 1994-95.

Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland.
The visual systems of vertebrates and invertebrates are discustsed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.]

## BIONB 328 Biopsychology of Learning and Memory (also Paychology 332)

Spring. 3 credits. Prerequisites: one year of biology and either a course in biopsychology or BIONB 222.

Lecs, M W F 11:15. T. J. IDeVoogd. This course surveys the approaches that have been or are currently being used to understand the biological bases for leaming and memory. Topics include invertebrate, "simple
system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature
[BIONB 396 Introduction to Sensory Systems (also Psychology 396) Spring. 3 or 4 credits ( 4 credits with term paper). Registration for the 4 -credit option requires permission of instructor. No auditors. Prerequisites: an introductory course in biology or biopsychology, and a second course in neurobiology or behavior or perception or cognition or biopsychology; students are expected to have elementary knowledge of perception, neurophysiology behavior, and chemistry. Offered alternate years. Not offered 1994-95.

Lecs, M W F 10:10. B. P. Halpern. This course employs the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. Classroom discussion can increase, but not decrease, a student's final grade. There are two preliminary exams and a final exam. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. Two or more textbooks, and a course packet of reproduced articles are used. At the level of An Introduction to the Physiology of Hearing, by J. O. Pickles; Pbysiological acoustics, neural coding, and psychoacoustics, by W. L. Gulick, G. A. Gescheider, and R. D. Frisina; The Retina: An approachable part of the brain, by J. E. Dowling; Handbook of Pbysiology-The Nervous System. III. Sensory Processes, edited by J. M. Brookhard and V. B. Mountcastle.]

## BIONB 420 Topics in Neurobiology and

 BehaviorFall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional.

To be arranged. Staff.
Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division's catalog supplement issued at the beginning of the semester
BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also Psychology 431 and 631)
Fall. 3 or 4 credits ( 4 credits with term paper) Limited to 25 students. Prerequisites: Introductory course in biology or psychology, plus a second course in perception or neurobiology, cognition, or biopsychology. S-U grades optional. Offered alternate years

Lecs, T R 10:10-11:25. B. P. Halpern. A literature-based examination of postmaturation changes in the perceptual, structural, and physiological characteristics of somesthetic, chemosensory, visual, and auditory systems. There is emphasis on human data, with non-human information included when especially relevant. The course examines the current developments in human sensory prosthetic devices, and in
regeneration of receptor structures. Brief written statements (preferably by electronic mail) of questions and problems related to each set of assigned readings are required at least one day in advance of each class meeting. This course employes the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with the subject matter of the course.

## [BIONB 423 Neurogenetics

Fall. 3 credits. Limited to junior, senior, and graduate students. Prerequisites: Permission of instructor, one year of introductory biology or equivalent, and BIONB 222 and BIOGD 281. S-U grades optional. Offered alternate years. Not offered 1994-95

Lecs, T R 2:30; disc, R 3:35.
A. M. Schneiderman.

Lectures, discussions, and student presentations focus on the uses of genetics for the study of the nervous system. Emphasis is on recent advances in genetic and molecular biological techniques and their application to the study of neural development and behavior. Both invertebrate and vertebrate systems are discussed, and main consideration is given to the fruit fly and the mouse. Readings are taken primarily from original journal articles.]

## BIONB 424 Neuroethology (also Psychology 424)

Spring. 3 credits. Prerequisites: BIONB 221 and 222. Offered alternate years. Offered spring 1995,1996 , and alternate spring semesters thereafter.

Lecs, M W F 9:05; disc to be arranged.
C. D. Hopkins.

From the 1950 s through the 1970 s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of acoustic communication in insects and in verebrates, echolocation in bats and sound localization in owls, electroreception and electrolocation, chemical communication, and visual processing. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts. Assigned readings include original articles from the scientific literature. A term paper or poster on neuroethology is required.

BIONB 426 Electronics for Neurobiology Spring. 3 credits. Limited to 20 students. Prerequisites: BIONB 222 and one year of introductory physics. Offered alternate years. Lecs, T R 9:05; lab, 4 hours each week to be arranged. Staff.
The course deals with electronics as applied to neurobiology and behavior. Analog circuits centered around operational amplifiers are emphasized. Topics include a review of basic electrical concepts; the cell as circuit, voltage, and current amplifiers; transducers (temperature, light, pressure, etc.); filtering; timing circuits; radiotelemetry; basic trouble shooting; and reading schematics. In the last third of the term, students design and construct a circuit (both circuit board and housing box) of
their own choosing relative to their research and/or interests.

BIONB 427 Animal Social Behavior
Fall. 4 credits. Limited to 30 students.
Prerequisites: BIONB 221 and BIOES 261 or 378 , and advance permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years.

Lecs and discs, M W 2:30-4:25.
P. W. Sherman.

An intensive course for upper-division students interested in behavorial ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, senescence, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

## BIONB 428 Topics in Behavior

 Fall or spring. 2-4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit. Primarily for undergraduates. S-U grades optional.Sem to be arranged. Staff.
Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, biorhythms, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester

## [BIONB 429 Olfaction and Taste: Structure and Function (also Psychology 429)

Fall. 3 or 4 credits ( 4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see Psych 629. Prerequisite: a 300-level course in biopsychology or equivalent. S-U grades optional for graduate students only. Offered alternate years. Not offered 1994-95.

Lecs, T R 9:05. B. P. Halpern
The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes, as well as at the molecular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.]

## BIONB 491 Principles of

Neurophysiology
Fall. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students.

Lecs, M W 10:10; lab, M or W 12:20-4:25;
additional hours to be arranged
B. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern
cellular neurophysiology. Lecture time is used to present laboratory exercise results, to supplement laboratory topics, and for discussion of primary research papers. Intracellular and extracellular recording techniques are used to analyze neuronal properties such as resting potentials, electrical and chemical synaptic transmission, ionic currents under voltage-clamp, and functional expression of foreign membrane proteins in Xenopus oocytes. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

## BIONB 492 Sensory Function (also Psychology 492)

Spring. 3 or 4 credits. (The 4 -credit option involves a one-hour section once a week, in which students are expected to participate in discussion. The 4 -credit option is not always offered.) Prerequisite: a 300-level course in biopsychology or BIONB 222 or BIOAP 311, or permission of instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years

Lecs, M W F 10:10; disc, hours to be
arranged. B. P. Halpern, H. C. Howland. This course covers classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, the development of sensory system, nonclassical topics such as
electroreception and internal chemoreceptors. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of The Senses, edited by Barlow and Mollon, and $A n$ Introduction to the Physiology of Hearing, 2nd edition, by Pickles.

## BIONB 493 Developmental Neurobiology

 Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years.Lecs, M W F 9:05. R. Booker. Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

## BIONB 494 Comparative Vertebrate

 NeuroanatomySpring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or equivalent. S-U grades optional. Offered alternate years.

Lecs, T R 10:10-11:30. A. H. Bass. Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior

BIONB 495 Membrane Ion Channels
Spring. 3 credits. Limited to 15 students. Prerequisites: BIONB 222, college introductory physics, and calculus, or permission of instructor. S-U grades optional. Offered alternate years.

Lecs, M W F 10:10. Staff.
The functional and mechanistic aspects of membrane ion channels, beginning with basic concepts and model systems. Theories of ion permeation and channel gating are discussed. Development of membrane ion channels during neuron differentiation and the role of membrane channels in disease states are also considered.

## BIONB 496 Bioacoustic Signals in

 Animals and ManSpring. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: one year of introductory biology, Phys 101-102 or 207-208, and permission of instructor. S-U grades optional. Offered alternate years.

Lecs, $M$ W 9:05; lah to be arranged.
C. Clark, R. R. Hoy.

Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior This course teaches students about animal acoustical communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class Class research projects on a selected topic in bioacoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/ A data acquisition boards

## BIONB 497 Neurochemistry and

Molecular Neurobiology
Fall. 3 credits. Limited to 30 students. Prerequisites: BIONB 222 and either BIOBM 330 or $331 / 332$, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, T R 9:05; disc, T 2:25.
R. M. Harris-Warrick.

This course focuses primarily on the biochemistry/molecular biology of neurons. Emphasis is on the molecular properties of these cells that account for their unique function. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Readings are selected primarily from research journals.]

## BIONB 623 Chemical Communication

 (also Chemistry 622)Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and Chem 358 or equivalent. Offered alternate years.

Lecs, M W 1:25; disc, F 1:25. Coordinators
J. Meinwald, T. Eisner, W. L. Roelofs, and guest lecturers.
The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

The discussion sessions focus on readings from the recent literature and involve studentled discussions of contemporary topics.

## BIONB 626 Sex Differences in Brain and Behavior (also Psychology 524)

Spring. 2 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor.

Discs and sems, M W 3:35-5:30.
T. J. DeVoogd.

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.
BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.

Sem to be arranged. Staff and students. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior

## BIONB 721 Introductory Graduate

Survey in Neurobiology and Behavior Fall. 2 credits each term. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only.

Lecs and discs, T R 11:15-12:05, alternate weeks. Staff.
Lectures by faculty and student-led discussions on topics of current importance in neurobiology and behavior. Topics are linked to the materials presented in BIONB 221 and 222. Class meets twice a week, every other week Students are required to write four term papers, over the two semesters, on selected topics in two of three sub-areas: (1) cellular and molecular neurobiology; (2) integrative neurobiology; (3) behavior.

## BIONB 723 Advanced Topics in Animal

 BehaviorFall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.

Sem to be arranged. Staff A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester

## BIONB 724 Field Methods in Animal

 BehaviorFall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional.

Sem and fieldwork to be arranged. Staff. A seminar-field experience course designed for first-year graduate students in animal
behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

## BIONB 790 Advanced Topics in Cellular and Molecular Meurobiology

Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BIONB 222. S-U grades optional.

Lecs and sem to be arranged. Staff. A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

## BIONB 792 Advanced Laboratory in

Cellular and Molecular Neurobiology Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students Prerequisites: BIOBM 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional

Lab to be arranged. Staff.
A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

## BIONB 793 Advanced Topics in Integrative Neurobiology

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional.

Lecs and discs to be arranged. Staff. A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.
BIONB 794 Advanced Laboratory Techniques in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview

Lab to be arranged. Staff.
A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

## PLANT BIOLOGY (BIOPL)

BIOPL 241 Introductory Botany

## Fall. 3 credits.

Lecs, T R 9:05; lab, M T W R or F 1:25-
4:25, or M or W 7:30-10:30 p.m.
K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOPL 242 Plant Physiology, Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences, but also for any Biological Sciences students wanting to know about plant function. Suitable as a secondlevel course for nonmajors to satisfy the biology distribution requirement. Prerequisites: one year of introductory biology and/or BIOPL 241. Recommended: one year introductory chemistry. Concurrent enrollment in BIOPL 244 required of undergraduates except those majoring in the social sciences or humanities, for whom it is recommended. May not be taken for credit after BIOPL 342 except by written permission of instructor.

Lecs, M W F 10:10. P. J. Davies. How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development-hormones, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering.

## 〔BIOPL 243 Taxonomy of Cultivated

 PlantsFall. 4 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Not offered 1994-95.

Lecs, M W 10:10; labs, M W 2-4:25.
M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.]
BIOPL 244 Plant Physiology, Laboratory Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344.

Disc and lab, M T W or R 12:20-4:25. C. Reiss.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

## BIOPL 245 Plant Biology

Summer (6-week session). 3 credits. Limited to 24 students.

Lecs, M-F 11:30-12:45; labs, M W 1:45 3:45. S. Williams.
Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of angiosperms. Much of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

## BIOPL 246 Plants and Civilization

## Spring. 3 credits.

Lecs, T R 11:15; disc, T or W 1:25 or W or R 12:20. D. M. Bates.
A consideration of the role that plants have played and continue to play in the evolution of human cultures. Emphasis is on the interactions between humans and the plant environment, the nature of plants and manner in which humans use and integrate them into their cultures, and the problems and concerns related to contemporary and future use of plant resources.
BIOPL 248 Taxonomy of Vascular Plants Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional.

Lecs, M W F 9:05; lab, W or R 1:25-4:25.
J. I. Davis.

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

## BIOPL 342 Plant Physiology, Lectures (formerly Bio \$ 341)

Spring. 3 credits. Prerequisites: one year of introductory biology, organic chemistry, and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be
taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25. A. T. Jagendorf, T. G. Owens.

The behavior, growth, transport processes, and environmental response of plants. Topics include membrane properties, solute and water transport, and function of osmotic forces; mineral and organic nutrition; stress resistance; growth and development controls; metabolism, including photosynthesis and respiration; and responses to environmental influences.

BIOPL 343 Molecular Biology and Genetic Engineering of Plants
Fall. 2 credits. S-U grades optional. Prerequisite: BIOGD 281 or PL BR 225 or permission of instructor.

Lecs, T R 11:15. M. E. Nasrallah. An introduction to current studies involving recombinant DNA technology and its application to the analysis of basic plant processes. The course emphasizes genetic transformation methodology, molecular genetic approaches to the study of selected plant systems, and prospects for plant improvement using biotechnology. The course is directed at undergraduates who wish to become familiar with plants as experimental organisms. Selected topics attempt to illustrate the uniqueness of plant life and how it differs from other systems.

## BIOPL 344 Plant Physiology, Laboratory (formerly Bio S 349)

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level.

Lab, W 1:25-4:25; disc, W 12:20. C. Reiss. Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

## [BIOPL 345 Plant Anatomy

Fall. 4 credits. Limited to 15 students. Prerequisite: one year of introductory biology or a semester of botany. Offered altemate years. Not offered 1994-95.

Lecs, M W 9:05; labs, M W 2-4:25.
D. J. Paolillo.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.]

## [BIOPL 346 Algal Physiology

Fall. 3 credits. Prerequisites: one year of introductory biology for majors and BIOPL 242 or 342 , or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, T R 8:30-9:55. T. G. Owens. This course takes an interdisciplinary approach to the study of algae with an emphasis on the physiology, biochemistry, and ecology of this diverse group of organisms. The algal classes are briefly described with consideration of traditional and emerging criteria for classification of the algae. The majority of the course focuses on interactions of algae with the physical/chemical environment, uptake of inorganic compounds, algal photosynthesis, metabolic strategies, and population dynamics of planktonic algae and benthic macrophytes. There is no laboratory section with this course.]

BIOPL 347 Laboratory in Molecular Biology and Cenetic Engineering of Plants
Fall. 2 credits. Limited to 24 students. S-U grades optional. Prerequisite: BIOPL 343 or permission of instructor

Lab, W 12:25-4:25. M. E. Nasrallah.
The laboratory provides experience in handling and experimenting with the plant Arabidopsis thaliana. Selected experiments include the preparation and analysis of nucleic acids, methods used in the detection and isolation of plant genes, analysis of gene expression using antibody and nucleic acid probes, mutant isolation, and methods of gene transfer to plants.
[BIOPL 359 Biology of Grasses
Fall. 3 credits. Limited to 24 students. Prerequisite: one year of introductory biology or an introductory plant taxonomy course, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10; lab, T 1:25-4:25
J. I. Davis.

Systematics and ecology of the graminoid plant families (grasses, sedges, and rushes), with principal emphasis on grasses. Major topics include taxonomy, phylogenetics, physiology, reproductive biology, ecotypic variation, speciation, biogeography, and population biology. The role of graminoids as ecosystem dominants, weeds, and the origins of cultivated species are discussed. Laboratory concentrates on the diversity of grasses.]

## BIOPL 441 Crop Plant Evolution

Fall. 2 credits. Prerequisite: an advancedlevel course in the plant sciences with taxonomic content or permission of instructor Offered alternate years. Not offered 1994-95.

Lecs, T R 11:15. D. M. Bates.
An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.]

## [BIOPL 443 Research Methods in Systematic Botany

Fall or spring. 2 credits. Limited to 10 students. Prerequisite: BIOPL 248 or equivalent Offered alternate years. Not offered 1994-95.

Lab, F 1:25-4:25; additional hours to be arranged. Bailey Hortorium staff. An introduction to the methodology of plant systematic research: field studies; sampling and collecting methods; preparation of taxonomic revisions and monographs; numerical methods of data analysis; and laboratory methods in cytogenetics, comparative anatomy, and comparative chemistry, as applied to problems in plant systematics.]

## BIOPL 444 Plant Cell Biology

Fall. 4 credits. Limited to 24 students Prerequisites: one year of introductory biology or permission of instructor Lecs, M W F 9:05; lab, M or W 1:25-4:25. R. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its
environment, and the processes that give rise to multicellular differentiated plants are investigated.

## BIOPL 445 Photosynthesis

Fall. 3 credits. Prerequisites: Chem 104 or 208, Math 106 or 111, and either Phys 102 or 208 or permission of instructor. Offered alternate years.

Lecs, M W F 10:10. T. G. Owens A detailed study of the processes by which plants use light energy to grow. Structure of the photosynthetic apparatus, light absorption and antenna processes, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.

## [BIOPL 447 Molecular Plant Systematics

 Fall. 3 credits. Prerequisites: BIOPL 248, and BIOGD 281, or written permission of instructor. Offered alternate years. Not offered 1994-95.Lecs, T R 10:10-11:30. J. J. Doyle. The study of variation at the molecular level and its application to the taxonomy and evolution of plants, particularly angiosperms. Emphasis is on the use of molecular evidence, particularly DNA data, for reconstructing phylogenies. Theory and methods of phylogenetic reconstruction are discussed. The organization and evolution of nuclear, mitochondrial, and chloroplast genomes, genes, and gene products are described from the standpoint of their utility for addressing a diversity of evolutionary questions. These questions span the entire taxonomic spectrum, and include such issues as the origin of angiosperms, evolution of species related to important crop plants, and population studies of hybridization.]

## BIOPL 448 Plant Evolution and the Fossil

 RecordSpring. 3 credits. Prerequisite: BIOPL 241 or equivalent, or permission of instructor. Offered altemate years.

Lecs, T R 9:05; lab, R 12:20-2:15.
K. J. Niklas.

An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

## [BIOPL 453 Principles and Practice of Historical Biogeography (also

 Entomology 453)Fall. 3 credits. S-U grades optional. Prerequisite: a course in systematics or permission of instructor. Not offered 1994-95.

Lecs, T R 10:10; lab/disc, R 2:30-4:25.
J. K. Liebherr, M. A. Luckow.

This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.!

## BIOPL 641 Laboratory In Plant Molecular

 BiologySpring. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. S-U grades optional.

Lab, T 9:05-4:30. J. B. Nasrallah,
M. R. Hanson, S. D. Tanksley,
P. F. Palukaitis.

Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems. Students may have additional lab time to complete assignments.

## BIOPL 642 Plant Mineral Nutrition (also

 Soil, Crop, and Atmospherlc Sciences 642)Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years.

Lecs, M W F 10:10. L. V. Kochian,
R. M. Welch.

A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and comparmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics

## BIOPL 643 Plant Physiology, Advanced

 Laboratory TechniquesFall. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only.

Lab, T or W 8-5; disc, M 4:30-5:30
A. T. Jagendorf and staff.

An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes fluorescence measurements, infrared $\mathrm{CO}_{2}$ analysis, gel electrophoresis and Western blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment

## [BIOPL 644 Plant Growth and Development

Spring. 3 credits. Prerequisites: BIOPL 345 and either 242 or 342 or their equivalents, or written permission of instructor. Offered alternate years. Not offered 1994-95.

Lecs, M W F 9:05. P. J. Davies,
D. J. Paolillo.

Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue differentiation, organ formation, embryo development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.]

## [BIOPL 645 Families of Tropical

 Flowering PlantsFall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1994-95.

Lec and disc, F 11:15. K. C. Nixon. The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships
in these families for the student venturing into the tropics.]

## [BIOPL 646 Families of Tropical

 Flowering Plants: Field Laboratory Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: BIOPL 243 or 248 or equivalent. Recommended: BIOPL 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered alternate years. Not offered 1994-95.K. C. Nixon.

An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "wholebiology" context.]

## BIOPL 647 Seminar in Systematic Botany

Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional.

Sem, T 11:15-1:10. Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany

## BIOPL 648 Plant Biochemistry

Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered altemate years.

Lecs, M W F 9:05. A. T. Jagendorf and staff.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

## [BIOPL 649 Transport of Solutes and

 Water in PlantsFall. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years. Not offered 1994-95.

Lecs, T R 10:10-11:30. R. M. Spanswick. Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport; and water relations of single cells and whole plants.]

## BIOPL 651 Quantitative Whole-Plant

 PhysiologyFall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years.

Lecs, T R 10:10-11:30. R. M. Spanswick. An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

BIOPL 652 Plant Molecular Biology II
Spring. 1-4 credits (1 credit per section). Prerequisites: BIOGD 281, and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

## Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 662)

1 credit.
Lecs, M W F 10:10 (12 lecs) Jan. 25-Feb. 20. P. F. Palukaitis, O. C. Yoder,
A. R. Collmer.

An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (viruses, bacteria, and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

## Section 02 Molecular Biology of Plant Organelles

1 credit. S-U grades optional.
Lecs, M W F 1:25 (12 lecs) Jan. 25-Feb. 20. M. R. Hanson (even years), D. B. Stern (odd years).
An in-depth examination of the molecular biology of plant mitochondria (even years) and plastids (odd years). Topics include the organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Special topics include cytoplasmic male sterility and gene regulation during plastid development.

## Section 03 Molecular Aspects of Plant Development II

1 credit. S-U grades optional.
Lecs, M W F 10:10 (12 lecs) Feb. 22-Mar. 27. S. H. Howell.

A systems approach to the study of plant development from a molecular perspective. Topics include molecular genetics of flowering, embryogenesis, meristem function, vascular formation, root development; consideration of cell lineages and positional information.

## Section 04 Molecular Plant-Microbe

## Interactions

1 credit. S-U grades optional.
Lecs, M W F 10:10 (12 lecs) Mar. 29-Apr.
24. S. C. Winans.

Course focuses on the interactions of Agrobacteria and Rhizobia with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization and function of the sym plasmid, nodule development, and plant genetics involved in plantmicrobe interaction.

## Section 05 Plant Gene Evolution 1 credit.

> Lecs, M W F 1:25 (12 lecs) Mar. 29-Apr. 24. J. J. Doyle.

Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of
sequence evolution, paralogy and othology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

## BIOPL 653 Plant Molecular Biology I

Fall. $1-4$ credits ( 1 credit per section) Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents. Recommended: BIOBM 331. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

## Section 01 Concepts and Techniques in Plant Molecular Biology

1 credit.
Lecs, M W F 10:10 (12 lecs) Aug. 31-Sept. 26. R. Wu, D. B. Stern.

A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

## Section 02 Plant Biotechnology (also

 Plant Breeding 653 and Plant Pathology 663)
## 1 credit.

Lecs, M W F 10:10 ( 12 lecs) Aug. 31-Sept. 26. M. Zaitlin, E. D. Earle.

Applications of molecular biology and tissue culture to plant biotechnology are studied. Topics covered include gene introduction and tissue culture technologies; use of somaclonal variation; and use of cultured plant materials and transgenic plants to obtain resistance to insects, plant diseases, and herbicides, and to improve nutritional and food processing qualities. Regulatory and social issues relating to plant biotechnology are discussed.

## Section 03 Plant Genome Organization and Function (also Plant Breeding 653)

## 1 credit.

Lecs, M W F 10:10 (12 lecs) Oct. 3-Oct. 31. S. D. Tanksley.

Molecular structure and evolution of plant nuclear genomes are explored. Topics covered include mechanisms for packaging DNA into chromosomes, molecular structure of telomeres and centromeres, DNA replication and methylation, and molecular biology of plant transposons. Methods for genetic and physical mapping of plant genomes are discussed as well as applications of mapping tools for gene isolation and plant breeding.

## Section 04 Molecular Aspects of Plant

 Development I1 credit.
Lecs, M W F 10:10 ( 12 lecs) Nov. 2-Nov. 30. J. B. Nasrallah.

The module explores current approaches to the elucidation of molecular signals and signal transduction pathways as they relate to the establishment of the differentiated state of plant cells and organs. Topics include the use of classical and molecular genetics, gene tagging methods, and transgenic plants for the study of cellular differentiation, hormonal and light responses, and cell-cell signaling.
[BIOPL 654 Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1994-95.

Lec and disc to be arranged. R. P. Korf. An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.]

## BIOPL 655 Seminar in Ethnobotany (also Anthropology 627)

Fall. 2 or 4 credits ( 4 credits with independent tutorial). Prerequisite: written permission of instructor for undergraduates.

Lec, W 1:25; disc, W 2:30. D. M. Bates,
C. R. Franquemont.

An exploration of ethnobotany, the study of the interrelationships of people and plants viewed from anthropological and botanical perspectives. Contemporary issues, theory, and methodology are considered. Topics include subsistence systems, crop domestication, traditional medicine, indigenous resource management, and preceptions of nature, among others.

## BIOPL 656 Topics in Paleobotany

Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor.

Lab and disc to be arranged. K. J. Niklas. A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

## BIOPL 740 Plant Biology Seminar

Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology.

Sem, F 11:15. Staff.
Lectures on current research in plant biology, presented by visitors and staff.

## BIOPL 742 Current Topics in Plant

 Molecular BiologyFall or spring. 1 credit. Limited to 20 students. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only.

Sem, 1 hour each week to be arranged. Staff.
A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

## BIOPL 749 Graduate Research in Botany

Fall or spring. Variable credit. May be repeated for credit, S-U grades optional. Hours to be arranged. Staff.
Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

## BIOPL 840 Current Topics in Plant

 PhysiologyFall or spring. 2 credits. May be repeated for credit. S-U grades only.

Sem to be arranged. Staff.
Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

## COURSES IN MARINE SCIENCE

Comell offers an extensive listing of undergraduate courses in marine science.
Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology and Oceanography offered through the Division of Biological Sciences and the summer program of courses offered by the Shoals Marine Laboratory. Further information on both can be found at the Comell Marine Programs Office, G14 Stimson Hall.

## Undergraduate Specialization in Marine

 Biology and OceanographyBiological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the areas of marine biology and oceanography. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology and oceanography are encouraged to enroll in the following courses:

1) BIOES 154, The Sea: An Introduction to Oceanography,
2) BIOES 364, Field Marine Science or a $400-$ level BIOSM field course at the Shoals Marine Laboratory,
3) BIOES 462, Marine Ecology.

Students in this specialization are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

## SHOALS MARINE LABORATORY (BIOSM)

## G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants leam from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.
Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47 -foot research vessel, Jobn M. Kingsbury. Field experience is an integral component of all courses, using Appledore's extensive intertidal zone, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community,
The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association.
The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

## BIOSM 160 The Oceanography of the Gulf of Maine

Summer. 4 credits. S-U grades optional. Limited to 24 students. A special 3 -week course offered aboard the SSV Corwith Cramer and at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA 02543. Estimated cost (includes tuition, room and board aboard ship and on the island, and ferry transportation), $\$ 2,200$.

Daily lecs, labs, and fieldwork for 3 weeks.
SML faculty.
An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend ten days aboard the Sea Education Association's SSV Corwith Cramer and sail from Woods Hole, Mass., to the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven
days at the Shoals Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment

## BIOSM 161 Introduction to Field Marine Science

Summer. 4 credits. S-U grades optional. A special 2-week course offered at Comell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,700.

Daily lecs, labs, and fieldwork for 2 weeks SML faculty
This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

BIOSM 204 Biological Illustration
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, supplies, and ferry transportation), $\$ 850$.

Daily sessions for 1 week. SML faculty. General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual
attention can be emphasized.

## BIOSM 309 Coastal Ecology and Bioclimates

Summer. 4 credits. Prerequisite: one year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,650.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty
A study of the fundamentals of organismenvironment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipital wind, and currents. In-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

## BIOSM 327 Neurobiology of Animal Behavior

Summer. 4 credits. Prerequisite: permission of instructor and successful performance in college-level introductory biology and chemistry courses with laboratories. Recommended: course work in neurobiology, psychology, and animal behavior. S-U grades optional. A special 2 -week course offered at Cornell's Shoals Marine Laboratory (SML) on
an island off the coast of Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $\$ 1,650$.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty
Neural mechanisms underlie all behaviors, from simple reflexes to complex social interactions. The functional elements of those mechanisms often are common to both vertebrate and invertebrate nervous systems. The course focuses on neural mechanisms of behavior in marine organisms, a topic that has produced significant biomedical discoveries. Students gain hands-on experience with a spectrum of modern research techniques for behavioral, systems, cellular, and molecular approaches. A visiting scientist program allows student interaction with research scientists.

BIOSm 329 Ecology of Animal Behavior Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Comell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,650.

Daily lecs and fieldwork for 2 weeks. SML faculty.
The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.
BIOSM 363 Marine Blology for Teachers Summer. 3 credits. Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,200.

Daily lecs, labs, and fieldwork for 10 days. SML faculty.
Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastalzone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.

BIOSM 364 Field Marine Science
Summer. 6 credits. Prerequisite: one year of college biology. S-U grades optional. A special 4 -week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,550.

Daily lecs, labs, and fieldwork for 4 weeks 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies and commercial fishermen. SML faculty.
Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course

## BIOSM 365 Underwater Research

Summer. 4 credits. Prerequisites: one year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2 -week course offered at Comell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,750.

Daily lecs and fieldwork for 2 weeks.
Team-taught by a diving-safety officer, two
faculty members, and guest lecturers. For competent divers only. Covers special problems of underwater research, including random sampling, use of dive tables, underwater instrumentation, special diving equipment, photographic techniques, integration with boat and shore facilities, and emergency procedures. Students are required to conduct a transect study on both soft and hard substrates.

## BIOSM 366-370 SEA Semester

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory office offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (the six-week shore component) in Woods Hole, Mass., receiving instruction in oceanography, nautical science, and maritime studies. The second half of SEA Semester (the six-week sea component) is spent at sea aboard the R/V Westward or the R/V Corwith Cramer. Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. Comell students enrolled in the SEA Semester must take the entire sequence.
For more information, consult the Shoals Marine Laboratory office, G14 Stimson Hall, or call SEA directly at 1-800-552-3633. Program costs are to be paid in place of regular Comell tuition and fees: tuition for entire 17 -credit SEA Semester, about $\$ 8,500$; room and board about $\$ 2,500$.
Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

Shore Component (six weeks)
BIOSM 366 SEA Introduction to Oceanography
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea

## BIOSM 367 SEA Introduction to Maritime Studies

3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs

## BIOSM 368 SEA Introduction to Nautical Science

3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics.
Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

## Sea Component (six weaks)

Courses 369 and 370 take place aboard the R/V Westward, a 125 -foot steel auxiliarypowered staysail schooner built in 1961, or the R/V Corwith Cramer, a 134 -foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to twenty-four students round out the complement.

## BIO8M 369 SEA Practical

 Oceanography I4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

## BIOSM 370 SEA Practical

Oceanography II
4 credits. Prerequisites: BIOSM 368 and 369 Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and
the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

## BIOSM 372 SEA Practical <br> Oceanography III

Summer. 3 credits. Prerequisites: BIOSM 366,367 , and 368 . Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

## BIOSM 402 Marine Pollution

Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2 -week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,650.

Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.
Dispersion modeling and the effects of pollutants (including oil, outfalls, solid wastes, sludge and dredge spoils, and radioactive wastes) are discussed from the perspectives of elementary physical oceanography and biological processes. Laboratories include basic methods for targeting and tracing wastewater, organic carbon determinations, and practical field projects.

## BIOSM 409 Ciliophorology

Summer. 2 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$850

Daily lecs and labs for 1 week
SML faculty.
A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a detailed look at the ciliate faunules found in such diverse habitats as salt marshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

## BIOSM 413 Adaptations of Marine

 OrganismsSummer. 6 credits. Prerequisite: BIOSM 364 or a course in physiological ecology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,250.

Daily lecs, labs, and fieldwork for 3 weeks SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in vivo functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

## BIOSM 449 Marine Botany: Ecology of

 Marine PlantsSummer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$1,650.

Daily lecs, labs, and fieldwork for 2 weeks.
SML faculty.
An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

## BIOSM 477 Marine Vertebrates

Summer. 6 credits. Prerequisites: permission of instructor and a course in vertebrate biology. S-U grades optional. A special 3 -week course offered at Comell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$2,250.

Daily lecs, labs, and fieldowork for 3 weeks. SML faculty.
Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeletomuscular structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions
AGEC The History and Economics of Whaling in North Amorlea (Agricultural Economics 454 and History 413)
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the

SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$850

Daily lecs, labs, and fieldwork for 1 week.
D. H. Usner, J. M. Conrad.

The whaling industry of nineteenth-century America presents a rich tapestry for studying the people, resources, and technology that contributed to the economic development of the United States. This course examines the species of whales on which that industry was based, aboriginal and colonial whaling, the golden era of the American fishery, whaling in the western Arctic, and the decline and demise of the industry in the early twentieth century. Social relationships, cross-cultural influences, markets, resource dynamics, and technical change are all evident in the rise and fall of this unique American industry.

## ARKEO Archaeology of Maritime

 Communities (Archaeology 300: Individual Study in Archaeology) Summer. 2 credits. Prerequisite: a strong interest in history or permission of instructor A special 1-week course offered at Comell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition room and board, and ferry transportation), $\$ 850$.Daily lecs, labs, and fieldwork for 1 week. SML faculty.
Fieldwork on various land sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.

## ARKEO Archaeology Underwater

## (Archaeology 319)

Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Comell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $\$ 950$.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.
An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

## GEOL Marine and Coastal Geology (Geological Sciences 213)

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML
office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), \$850.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.
With "the New England coast" defined as beginning at the -200 meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area's bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macroscale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

## NTRES Coastal and Oceanic Law and Policy (Natural Resources 306)

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $\$ 850$.

Daily lecs and discs for 1 week. SML faculty.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

## NTRES Wetland Resources (Natural Resources 417)

Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Comell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $\$ 850$.

Daily lecs, labs, and fieldwork for 1 week. SML faculty.
An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including freshand salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

## COURSES IN BIOPHYSICS

Biophysics is an interdisciplinary undergraduate and graduate program. Information on this independent option is available in the Office for Academic Affairs, 200 Stimson Hall.

Graduate study and research in biophysics are available through several Graduate Fields. Students interested in graduate study in any of the fields offering biophysics can inquire of the Biophysics Program in the Applied Physics Office, 210 Clark Hall. There is a concentration in biophysics available through the Field of Biochemistry, Molecular and Cell Biology. The following courses are available for students interested in biophysics:

## Advanced Concepts in Biological Engineering

 (Chemical Engineering 645)Biomedical Engineering (Chemical Engineering 481)

Biomechanical Systems-Analysis and Design (Mechanical and Aerospace Engineering 465)
Chemistry of Nucleic Acids (Chemistry 677)
Computer Interlacing for Neurobiologists (Biological Sciences [BIONB] 422)
Electron Microscopy for Biologists (Biological Sciences [BIO G] 401, 403. 405, 606, 608)

Electronics for Neurobiology (Biological Sciences [BIONB] 426)

Kinetics and Regulation of Enzyme Systems (Chemistry 672)
Enzyme Catalysis and Regulation (Chemistry 672)
Introduction to Bioprocess Engineering (Chemical Engineering 643)
Molecular Biophysics of Cellular Dynamics (Applied and Engineering Physics 615)

Membranes and Bioenergetics (Biological Sciences [BIOBM] 632)
Membrane Ion Channels (Biological Sciences [BIONB] 495)
Neurochemistry and Molecular Neurobiology (Biological Sciences [BIONB] 497)
Neuroethology (Biological Sciences [BIONB] 424)
Photosynthesis (Biological Sciences [BIOPL] 445)
Physical Chemistry of Proteins (Chemistry 686)
Principles of Neurophysiology (Biological Sciences [BIONB] 491)

Protein Structure and Function (Biological Sciences [BIOBM] 631)
Special Topics in Biophysical and Bioorganic Chemistry (Chemistry 782)
Transport of Solutes and Water in Plants (Biological Sciences [BIOPL] 649)

## FACULTY ROSTER

## New York State College of Agriculture and Life Sciences

Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Anderson, John M., Ph.D., New York U. Prof. Emeritus, Genetics and Development
Banks, Harlan P., Ph.D., Cornell U. Liberty Hyde Bailey Prof. of Botany Emeritus, Plant Biology
Barker, Robert, Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology/Center for the Environment
Bates, David M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorium

Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology $\dagger$ Bruns, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development
Cade, Thomas J., Ph.D., U. of California at Los Angeles. Prof. Emeritus, Ecology and Systematics
Calvo, Joseph M., Ph.D., Washington State U. William T. Keeton Professor in Biological Sciences; Biochemistry, Molecular and Cell Biology
Chabot, Brian F., Ph.D., Duke U. Prof., Ecology and Systematics
Clayton, Roderick K., Ph.D., California Inst. of Technology. Prof. Emeritus, Plant Biology
Crepet, William L., Ph.D., Yale U. Prof., Bailey Hortorium
Daniel, Louise J., Ph.D., Cornell U. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
Davies, Peter J., Ph.D., U. of Reading (England). Prof., Plant Biology*
Davis, Jerrold I., Ph.D., U. of Washington. Assoc. Prof., Bailey Hortorium
Delwiche, Eugene A., Ph.D., Comell U. Prof. Emeritus, Microbiology
Dondero, Norman C., Ph.D., Cornell U. Prof. Emeritus, Microbiology
Doyle, Jeffrey J., Ph.D., Indiana U. Assoc. Prof., Bailey Hortorium
Dress, William J., Ph.D., Comell U. Prof. Emeritus, Bailey Hortorium
Ealick, Steven E., Ph.D., U. of Oklahoma. Prof., Biochemistry, Molecular and Cell Biology
Eisner, Thomas, Ph.D., Harvard U. Jacob Gould Schurman Professor, Neurobiology and Behavior
Emlen, Stephen T., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Feeny, Paul P., PhD., Oxford U. (England). Prof., Ecology and Systematics/Entomology
Fox, Thomas D., Ph.D., Harvard U. Prof., Genetics and Development
Ghiorse, William C., Ph.D. Rensselaer Polytechnic Inst. Prof., Microbiology
Gibson, Jane, Ph.D., U. of London (England). Prof., Biochemistry, Molecular and Cell Biology
Goldberg, Michael L., Ph.D., Stanford U. Assoc. Prof., Genetics and Development
Hanson, Maureen R., Ph.D., Harvard U. Prof., Genetics and Development
Harrison, Richard G., Ph.D., Comell U. Prof., Ecology and Systematics
Harris-Warrick, Ronald M., Ph.D., Stanford U. Prof., Neurobiology and Behavior
Harvell, C. Drew, Ph.D., U. of Washington. Assoc. Prof., Ecology and Systematics
Helmann, John D., Ph.D., U. of California at Berkeley. Asst. Prof., Microbiology
Hopkins, Carl D., Ph.D., Rockefeller U. Prof., Neurobiology and Behavior
Howarth, Robert W., Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. David R. Atkinson Professor in Ecology and Environmental Biology, Ecology and Systematics/Soil, Crop, and Atmospheric Sciences/Center for the Environment
Ingram, John W., Ph.D., U. of California at Berkeley. Prof. Emeritus, Bailey Hortorium
Jagendorf, Andre T., Ph.D., Yale U. Liberty Hyde Bailey Professor of Plant Physiology, Plant Biology
Keller, Elizabeth B., Ph.D., Cornell U. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
Kemphues, Kenneth J., Ph.D., Indiana U. Assoc. Prof., Genetics and Development

Kingsbury, John M., Ph.D., Harvard U. Prof. Emeritus, Plant Biology
Lis, John T., Ph.D., Brandeis U. Prof., Biochemistry, Molecular and Cell Biology*
Loew, Ellis R., Ph.D., U. of California at Los Angeles. Assoc. Prof., Physiology/ Veterinary Physiologyt
Luckow, Melissa A., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium
MacDonald, Russell E., Ph.D., U. of Michigan. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
MacIntyre, Ross J., Ph.D., Johns Hopkins U. Prof., Genetics and Development
Madsen, Eugene L., Ph.D., Cornell U. Asst. Prof., Microbiology
Marks, Peter L., Ph.D., Yale U. Prof., Ecology and Systematics*
McCune, Amy R., Ph.D., Yale U. Assoc. Prof., Ecology and Systematics
Mortlock, Robert P., Ph.D., U. of Illinois. Prof., Microbiology
Nasrallah, June B., Ph.D., Cornell U. Assoc. Prof., Plant Biology
Nasrallah, Mikhail E., Ph.D., Cornell U. Prof., Plant Biology
Naylor, Harry B., Ph.D., Cornell U. Prof. Emeritus, Microbiology
Niklas, Karl J., Ph.D., U. of Illinois. Prof., Plant Biology
Nixon, Kevin C., Ph.D., U. of Texas at Austin. Assoc. Prof., Bailey Hortorium
Owens, Thomas G., Ph.D., Cornell U. Assoc. Prof., Plant Biology
Paolillo, Dominick J., Jr., Ph.D., U. of California at Davis. Prof., Plant Biology
Parthasarathy, Mandayam V., Ph.D., Comell U. Prof., Plant Biology
Quaroni, Andrea, Ph.D., U. of Pavia (Italy). Assoc. Prof., Physiology
Reeve, H. Kern, Ph.D., Cornell U. Asst. Prof., Neurobiology and Behavior
Roberts, Jeffrey W., Ph.D., Harvard U. Robert J. Appel Professor of Molecular and Cell Biology, Biochemistry, Molecular and Cell Biology
Root, Richard B., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics/ Entomology
Russell, James B., Ph.D., U. of California at Davis. Prof., Microbiology
Seeley, Jr., Harry W., Ph.D., Cornell U. Prof. Emeritus, Microbiology
Shalloway, David I., Ph.D., Massachusetts Inst. of Technology. Greater Philadelphia Prof., Biochemistry, Molecular and Cell Biology
Shapleigh, James P., Ph.D., U. of Georgia. Asst. Prof., Microbiology
Spanswick, Roger M., Ph.D., U. of Edinburgh (Scotland). Prof., Plant Biology
Srb, Adrian M., Ph.D., Stanford U. Jacob Gould Schurman Prof. Emeritus, Genetics and Development
Steward, Frederick C., Ph D., U. of Leeds (England). Charles A. Alexander Prof. Emeritus, Biological Sciences
Stewart, Valley J., Ph.D., U. of Virginia. Assoc. Prof., Microbiology/Genetics and Development
Tye, Bik-Kwoon, Ph.D., Massachusetts Inst. of Technology. Prof., Biochemistry, Molecular and Cell Biology
Uhl, Charles H., Ph.D., Cornell U. Prof. Emeritus, Plant Biology
Uhl, Natalie W., Ph.D., Cornell U. Prof. Emeritus, Bailey Hortorium
Vogt, Volker M., Ph.D., Harvard U. Prof., Biochemistry, Molecular and Cell Biology
Walcott, Charles, Ph.D., Comell U. Prof., Neurobiology and Behavior/Laboratory of Ornithology

Wayne, Randy O., Ph.D., U. of Massachuserts. Assoc. Prof., Plant Biology
Winans, Stephen C., Ph_D., Massachusetts Inst. of Technology. Asst. Prof., Microbiology
Winkler, David W., Ph.D., U. of California at Berkeley. Assoc. Prof., Ecology and Systematics
Wu, Ray, Ph.D., U. of Pennsylvania. Prof., Biochemistry, Molecular and Cell Biology
Zahler, Stanley A., Ph.D., U. of Chicago. Prof., Genetics and Development
Zinder, Stephen H., Ph.D., U. of Wisconsin. Prof., Microbiology

## Other Teaching Personnel

Alexander, Renee R., Ph.D., Comell U. Sr. Lecturer, Biochemistry, Molecular and Cell Biology
Blankenship, James E., M.S., Cornell U. Lecturer, Biochemistry, Molecular and Cell Biology
Cordts, Marcia L., Ph.D., Cornell U. Sr. Lecturer, Microbiology
Ecklund, P. Richard, Ph.D., Oregon State U. Lecturer, Neurobiology and Behavior
Glase, Jon C., Ph.D., Cornell U. Sr. Lecturer, Neurobiology and Behavior
Griffiths, Joan M., Ph.D., Cornell U. Lecturer, Biochemistry, Molecular and Cell Biology
Heiser, John B., Ph.D., Cornell U. Sr. Lecturer, Ecology and Systematics
McFadden, Carol H., Ph.D., Cornell U. Sr. Lecturer, Physiology
Merkel, Susan, M.S., Cornell U. Lecturer, Microbiology
Rehkugler, Carole M., M.S., Comell U. Sr. Lecturer, Microbiology
Reiss, H. Carol, M.S., Cornell U. Sr. Lecturer, Plant Biology
Tyler, Bonnie M., Ph.D., Massachusetts Inst. of Technology. Lecturer, Biochemistry, Molecular and Cell Biology

## Joint Appointees

Bloom, Stephen E., Assoc. Prof., Poultry and Avian Sciences/Biological Sciences
Borror, Arthur C., Adjunct Prof., U. of New Hampshire/Biological Sciences
Butler, Walter R., Assoc. Prof., Animal Science/Physiology
Dhondt, André A., Edwin H. Morgens Prof. of Ornithology, Lab. of Ornithology/Ecology and Systematics
Edelstein, Stuart M., Adjunct Prof., U. of Geneva (Switzerland)/Biochemistry, Molecular and Cell Biology
Foote, Robert H., Jacob Gould Schurman Prof. Emeritus, Animal Science/Physiology
Greene, Charles H., Adjunct Asst. Prof., Center for the Environment/Ecology and Systematics
Howell, Stephen H., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Kochian, Leon V., Adjunct Assoc. Prof., USDA Science and Education Administration/Plant Biology
Korf, Richard P., Prof., Plant Pathology/Bailey Hortorium
LaRue, Thomas A., Adjunct Prof., Boyce Thompson Institute/Plant Biology
Last, Robert L., Adjunct Assoc. Prof., Boyce Thompson Institute/Genetics and Development
Leopold, A. Carl, Adjunct Prof., Boyce Thompson Institute/Plant Biology
Liebherr, James K., Assoc. Prof., Entomology/ Bailey Hortorium
McCarty, Richard E., Adjunct Prof., Johns Hopkins U./Biochemistry, Molecular and Cell Biology

Moffar, J. Keith, Adjunct Prof., U. of Chicago/ Biochemistry, Molecular and Cell Biology
Pimentel, David, Prof., Entomology/Ecology and Systematics
Richmond, Milo E., Assoc. Prof., USDI Fish and Wildife Service/Natural Resources/ Ecology and Systematics
Rossman, Michael J., Adjunct Prof., Purdue U./ Biochemistry, Molecular and Cell Biology Stern, David B., Adjunct Asst. Prof., Boyce Thompson Institute/Plant Biology
Thompson, John F., Adjunct Prof., USDA Science and Education Administration/Plant Biology
van Tienhoven, Ari, Prof. Emeritus, Physiology
Via, Sara, Assoc. Prof., Entomology/Ecology and Systematics
Weeden, Norman F., Assoc. Prof., Horticultural Sciences/Bailey Hortorium
Wheeler, Quentin D., Assoc. Prof., Entomology/Bailey Hortorium

## College of Arts and Sciences

Aquadro, Charles F., Ph.D., U. of Georgia. Prof., Genetics and Development/Ecology and Systematics
Bass, Andrew H., Ph.D., U. of Michigan. Assoc. Prof., Neurobiology and Behavior
Blackler, Antonie W., Ph.D., U. of London (England). Prof., Genetics and Development
Booker, Ronald, Ph.D., Princeton U. Asst. Prof., Neurobiology and Behavior
Bretscher, Anthony P., Ph.D., Leeds U. (England). Assoc. Prof., Biochemistry, Molecular and Cell Biology
Brown, William J., Ph.D., U. of Texas Health Science Center at Dallas. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Capranica, Robert R., Sc.D., Massachusetts Inst. of Technology. Prof. Emeritus, Neurobiology and Behavior
Dawson, Todd E., Ph.D., U. of Washington. Asst. Prof., Ecology and Systematics
Feigenson, Gerald W., Ph.D., California Inst. of Technology. Prof., Biochemistry, Molecular and Cell Biology
Geber, Monica A., Ph.D., U. of Utah. Asst. Prof., Ecology and Systematics
Gibson, Quentin H., Ph.D./D.Sc., Queen's U (Northem Ireland). Greater Philadelphia Professor Emeritus in Biological Sciences, Biochemistry, Molecular and Cell Biology
Gilbert, Perry W., Ph.D., Cornell U. Prof. Emeritus, Neurobiology and Behavior
Hairston, Nelson G., Jr., Ph.D., U. of Washington. Prof., Ecology and Systematics
Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology
Hedin, Lars O., Ph.D., Yale U. Asst. Prof., Ecology and Systematics
Heppel, Leon A., Ph.D., U. of California at Berkeley. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
Hess, George P., Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology
Hinkle, Peter C., Ph.D., New York U. Prof., Biochemistry, Molecular and Cell Biology
Howland, Howard C., Ph D., Comell U. Prof., Neurobiology and Behavior/Physiology
Hoy, Ronald R., Ph.D., Stanford U. Prof., Neurobiology and Behavior $\ddagger$
Huffaker, Tim C., Ph.D., Massachusetts Inst. of Technology. Asst. Prof., Biochemistry, Molecular and Cell Biology
Karplus, P. Andrew, Ph.D., U. of Washington. Assoc. Prof., Biochemistry, Molecular and Cell Biology

Kennedy, Kenneth A. R., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics
Kondrashov, Alexey S., Ph D., Res. Computer Center and Inst. of Developmental Biology (Russia). Asst. Prof., Ecology and Systematics
Leonard, Samuel L., Ph.D., U. of Wisconsin. Prof. Emeritus, Genetics and Development
MacDonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof., Biochemistry, Molecular and Cell Biology/Program on Science, Technology, and Society
Mark, Willie H., Ph.D., U. of Wisconsin at Madison. Asst. Prof., Genetics and Development
McClearn, Deedra K., Ph.D., Harvard U. Asst. Prof., Ecology and Systematics
McFarland, William N., Ph.D., U. of California at Los Angeles. Prof. Emeritus, Ecology and Systematics
Podleski, Thomas R., Ph.D., Columbia U. Prof., Neurohiology and Behavior
Power, Alison G., Ph.D., U. of Washington. Assoc. Prof., Ecology and Systematics/ Science and Technology Studies
Provine, William B., Ph.D., U. of Chicago. Charles A. Alexander Professor of Biological Sciences, Ecology and Systematics/History
Salpeter, Miriam M., Ph.D., Cornell U. Prof, Neurobiology and Behavior/Applied and Engineering Physicss
Schneiderman, Anne M., Ph.D., Harvard U Asst. Prof., Neurobiology and Behavior
Seeley, Thomas D., Ph.D., Harvard U. Prof., Neurobiology and Behavior
Sherman, Paul W., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Silver, Robert B., PhD., U. of California at Berkeley. Assoc. Prof., Physiology
Turgeon, Robert, Ph.D., Carleton U. (Canada). Assoc. Prof., Plant Biology
Wilson, David B., Ph.D., Stanford U. Prof. Biochemistry, Molecular and Cell Biology
Wolfner, Mariana F., Ph.D., Stanford U. Assoc Prof., Genetics and Development

## Other Teaching Personnel

Albrecht, Genia S., Ph.D., U. of Washington. Sr. Lecturer, Biochemistry, Molecular and Cell Biology
Calvo, Rita A., Ph.D., Cornell U. Sr. Lecturer, Genetics and Development
Eberhard, Carolyn, Ph.D:, Boston U. Sr. lecturer, Plant Biology

## Joint Appointees

Adkins-Regan, Elizabeth, Prof., Psychology/ Neurobiology and Behavior
Levin, Simon A., Adjunct Prof., Princeton U./ Ecology and Systematics $\ddagger$
Likens, Gene E., Adjunct Prof., Institute of Ecosystem Studies/Ecology and Systematics

## New York State College of Veterinary Medicine

Corradino, Robert A., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Fortune, Joanne E., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Gasteiger, Edgar L., Ph.D., U. of Minnesota. Prof. Emeritus, Physiology
Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Physiologyt
Hansel, William, Ph.D., Cornell U. Liberty Hyde Bailey Prof. Emeritus, Physiology
Lengemann, Frederick W., Ph.D., U. of Wisconsin at Madison. Prof. Emeritus, Physiology

Robertshaw, David, Ph.D., Glasgow U. (Scotland). Prof., Physiology/Veterinary Physiology
Sirois, Jean, Ph.D., Comell U. Asst. Prof. Physiology
Tapper, Daniel N., Ph D., Cornell U. Prof., Physiology/Veterinary Physiology
Wasserman, Robert H., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology/ Nutritional Sciences* $\ddagger$

## Other Teaching Personnal

Concannon, Patrick W., Ph.D., Cornell U. Sr. Lecturer, Physiology

## Joint Appointees

Dobson, Alan, Prof., Veterinary Physiology/ Physiology
Houpt, Katherine A., Prof., Veterinary Physiology/Physiology
Houpt, T. Richard, Prof., Veterinary Physiology/Physiology
Nathanielsz, Peter W., Leading Prof., Clinical Sciences/Veterinary Physiology/Physiology
Sellers, Alvin F., Prof. Emeritus, Veterinary Physiology/Physiology
Wootton, John F., Prof., Veterinary Physiology/Physiology

## College of Engineering

## Joint Appointees

Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences
Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

## Division of Biological Sciences

Stinson, Harry T., Jr., Ph.D., Indiana U. Prof., Biological Sciences/Genetics and Development*

## Division of Nutritional Sciences

## Joint Appointees

Arion, William J., Prof., Nutritional Sciences/ Biochemistry, Molecular and Cell Biology
Bensadoun, Andre, Prof., Nutritional Sciences/ Physiology
Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Wright, Lemuel D., Ph.D., Oregon State Coll. Prof. Emeritus, Nutritional Sciences/ Biochemistry, Molecular and Cell Biology
*Joint appointment with the College of Arts and Sciences.
Joint appointment with the College of Veterinary Medicine.
$\ddagger$ Joint appointment with the College of Agriculture and Life Sciences.
§oint appointment with the College of Engineering

## ADMINISTRATION

John E. Hopcroft, dean
Michael S. Isaacson, associate dean for research and graduate studies

Gerald Rehkugler, associate dean for undergraduate programs
Mark K. Spiro, associate dean for administration

Murray Death, assistant dean for development and alumni relations
Richard Hale, assistant dean and director of admissions

Claude J. Poux, director of minority programs Richard K. Mosher, registrar

## FACILITIES AND SPECIAL PROGRAMS

Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.
Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Computing equipment, for example, is available through centers administered by the university and by the College of Engineering, as well as in laboratories run by schools, departments, or programs. The university facilities include personal computers for student use, terminals connected to the mainframe, computer-graphics equipment, and a supercomputer. The College of Engineering operates, in addition to several computing centers for student use, the Computer-Aided Design Instructional Facility, which provides advanced computer-graphics equipment used in course work throughout the college.
Cornell programs and centers of special interest in engineering include the following:
Center for Applied Mathematics. A crossdisciplinary center that administers a graduate program.
Center for the Environment. A sponsor of interdisciplinary programs that are currently in the areas of environmental law and policy, ecosystem research, remote sensing, water resources, the global environment, biological resources, waste management, and solid-waste combustion.

Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A national supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

Cornell High Energy Syncbrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Cornell Program in Power Systems Engineering. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.
Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.
Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.
Materials Science Center. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated equipment.
Mathematical Sciences Institute. An interdisciplinary program in applications of mathematics funded by the U.S. Army.
National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Comell in Puerto Rico.
National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation at a group of universities in New York State to study response and design of structures in earthquake environments.
National Institutes of Healtb/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

National Nanofabrication Facility. A center that provides equipment and services for research in the science, engineering, and technology of structures (including electronic components) with dimensions as small as nanometers.
Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.
Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.
SRC Center for the Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.
Statistics Center. Coordinates a universitywide program in statistics and probability.
Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research
Programs sponsored by College of Engineering units include several for industrial affiliates. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

## DEGREE PROGRAMS

Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.
General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.
Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

## UNDERGRADUATE STUDY

Bachelor of Science (B.S.) degrees are offered in the following areas:
Agricultural and biological engineering $\dagger$
Chemical engineering
Civil engineering
College program

Computer science
Electrical engineering
Engineering physics
Geological sciences
Materials science and engineering

## Mechanical engineering

Operations research and engineering
Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum with a bioengineering option within one of the field programs or through the College Program. Information about the bioengineering option is available in the Office of Undergraduate Programs, 221 Carpenter Hall. Students interested in environmental engineering may pursue the environmental tract offered by the School of Civil and Environmental Engineering.

- Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.
$\dagger$ To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first and second years, and jointly in that college and the College of Engineering for the third and fourth years. However, students enrolled in the College of Engineering for the first two years may affiliate with the field of agricultural and biological engineering and become jointly enrolled in the Colleges of Agriculture and Life Sciences and Engineering for the third and fourth years.

## Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. The Common Curriculum has recently been revised, and currently there are two phases of degree requirements. Phase I pertains to students in the Classes of 1995, 1996, and 1997; Phase II begins with students entering the college in the Class of 1998.* The Common Curriculum is explained below with the differences in Phase I and Phase II indicated. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 1994-95 edition of the Engineering Undergraduate Handbook.)
*Students in the Classes of 1995, 96, or 1997 may elect to pursue the course of study
available in Phase II with the permission of their field or department office.

## Phase I: Applicable through the Class of 1997

Course Category Credits

1) Mathematics 16
2) Physics 12
3) Chemistry 4
4) Freshman writing seminar 6
5) Computer programmingt 4
6) Engineering distribution ( 4 courses) 12
7) Liberal studies distribution ( 6 courses)
8) Electives:

Approved electives
9
Free electives
6
Technical electives
9) Field Program 30-46

## Phase II: Beginning with students in the Class of 1998

Course Category Credits

## 1) Mathematics

16
2) Physics 12
3) Chemistry
4) Freshman writing seminar*
5) Computer programmingt
6) Engineering distribution (3 courses)
a. One Introduction to Engineering
b. Two other distribution courses

6
7) Liberal studies distribution (6 courses) 18
8) Approved electives
9) Field program
a. Field required courses
$30 \mathrm{cr} . \mathrm{min}$.
b. Field approved electives
c. Courses outside the field
*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.
†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.
A minimum of 123 credit hours is required for graduation; the specific number of required credit hours will vary depending on which field program is chosen. (See field curricula for specific field requirements.) Two terms of physical education must be taken in the freshman year to satisfy a university requirement.

## Mathematics

The normal program in mathematics includes Mathematics 191,192, 293, and 294. Every student must attain a grade of at least C - in Mathematics 191, 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next
course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

## Physles

The normal program in physics includes Physics 112, 213, and 214 or the corresponding honors courses (Physics 116, 217, and 218). Engineering students are required to have attained a minimum grade of C - in Mathematics 191 or equivalent hefore taking Physics 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite ( e g., C - in Mathematics 192 before taking Physics 213, or C-in Mathematics 293 before taking Physics 214).
Students in the field programs of ABEN, CEE (environmental tract), or OR\&IE may substitute Chemistry 208 for Physics 214.

## Chemistry

Chemistry 211 or 207 is required for all students.
Chemistry 211 is a course designed for students who do not intend any further study in chemistry and may be taken either in the fall or spring of the freshman year.
In general, students intending to affiliate with the following departments and schools should take Chemistry 211: electrical engineering, operations research and industrial engineering, computer science, mechanical and aerospace engineering, applied and engineering physics (applied and engineering physics students should discuss this option with the field consultant), and civil engineering (not students in environmental engineering). Students in chemical engineering must take Chemistry 207 in the fall of their freshman year, to be followed by Chemistry 208 in the spring term. All students considering environmental engineering, materials science and engineering, geological sciences, or a health-related career such as medicine should take Chemistry 207.

## Freshman Writing Seminars

Each semester of their freshman year, students choose a freshman writing seminar from among more than seventy courses offered by over twenty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

## Technical Writing

In addition to the two Freshman Writing Seminars required, engineering students entering in the fall of 1990 or later, and transfer students matriculating in the fall of 1992 or later, must take a course that includes a significant amount of technical and scientific writing. This course may be used to satisfy another graduation requirement. A student can fulfill the technical writing requirement by enrolling in an engineering course specifically designed to include a writing-intensive component or by taking a course in technical or scientific writing. Courses that currently satisfy this requirement are A\&EP 264, CHEM E 432, COMM $352^{\circ}$, COMM $360^{\circ}$, COMM $363^{\circ}$, COMM $365^{\circ}$, ELE E 315, ENGRC 350, ENGRC 435, M\&AE 427, MS\&E 435, and MS\&E 443444 if both courses are taken. Students
participating in the Engineering Cooperative Program may also arrange for a writingintensive co-op experience to satisfy this requirement. Additional courses are being reviewed. Updated information on these approved courses may be obtained from Engineering Advising, 167 Olin Hall.
"Note that there is limited enrollment in all Communications Department writing courses.

## Computing

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 475, COM S 212, ENGRD 211, ENGRD 222, ENGRD 241, ENGRD 264, ELE E 423, M\&AE 389, M\&AE 489, M\&AE 575, M\&AE 578 , and M\&AE 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 222 or 241; in Computer Science, ENGRD 211 or COM S 212; in Electrical Engineering, ENGRD 211; in Civil Engineering, ENGRD 241; in Mechanical Engineering, M\&AE 389, M\&AE 489, M\&AE 575, or M\&AE 670; and in Operations Research and Engineering, ENGRD 211.

## Engineering Distribution

## Phase I: Applicable through the Class of

 1997Four engineering distribution courses (12 credits) are required. These courses must be selected from four of the eight areas listed below. A student may use only one of the possible substitutions described.

## 1) Introduction to engineering

Several courses are offered to introduce freshmen to the various fields of engineering. Some of these courses, which begin with ENGRI 110, may not be included in this announcement. A full listing will be available in the Course and Room Roster at the time of registration.

## 2) Scientific computing

ENGRD 211, Computers and Programming
ENGRD 222, Introduction to Scientific Computing
ENGRD 241, Engineering Computation
Students in the Field Program in Computer
Science may substitute COM S 212 for ENGRD 211 (also COM S 211).
3) Materials science

ENGRD 261, Introduction to Mechanical Properties of Materials
ENGRD 262, Introduction to Electrical Properties of Materials
4) Mechanics

ENGRD 202, Mechanics of Solids ENGRD 203, Dynamics
Students in the Field Program in Engineering Physics may substitute A\&EP 333 for ENGRD 203.

## 5) Probability and statistics

ENGRD 260, Introduction to Engineering Probability

ENGRD 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute ELE E 310 for ENGRD 260. Students in the Field Program in Engineering Physics may substitute ELE E 310 or Mathematics 471 for ENGRD 260. Students in the Field Programs in Civil Engineering and Agricultural Engineering may substitute CEE 304 for ENGRD 270.

## 6) Electrical sciences

ENGRD 210, Introduction to Electrical Systems
ENGRD 230, Introduction to Digital Systems
ENGRD 264, Computerized-Instrumentation Design
7) Thermodynamics and energy balances

ENGRD 219, Mass and Energy Balances
ENGRD 221, Thermodynamics
Students in the Field Program in Electrical Engineering may substitute ELE E 480 for ENGRD 221.

## 8) Earth and life sciences

ENGRD 201, Introduction to the Physics and Chemistry of the Earth

## Phase II: Beginning with students in the Class of 1998

Three engineering distribution courses ( 9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRI), and the other two should be chosen from two different categories listed below.
The Introduction of Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for currently offered courses. (During the 1994-95 academic year, a freshman may petition to have another engineering course satisfy the Introduction to Engineering Course requirement.)

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described. (See Field Program curricula for recommended courses.)

1) Scientific computing

ENGRD 211, Computers and Programming
ENGRD 212, Modes of Algorithmic Expression
ENGRD 222, Introduction to Scientific Computing
ENGRD 241, Engineering Computation
2) Materials science

ENGRD 261, Introduction to Mechanical Properties of Materials
ENGRD 262, Introduction to Electrical Properties of Materials
3) Mechanics

ENGRD 202, Mechanics of Solids ENGRD 203, Dynamics
Students in the Field Program in Engineering Physics may substitute A\&EP 333 for ENGRD 203.

## 4) Probability and statistics

ENGRD 270, Basic Engineering Probability and Statistics
Students in the Field Program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the Field Program in Engineering Physics may substitute ELE E 310 or Mathematics 471 for ENGRD 270. Students in the Field Programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.
5) Electrical sciences

ENGRD 210, Introduction to Electrical Systems
ENGRD 230, Introduction to Digital Systems
ENGRD 264, Computerized-Instrumentation Design
6) Thermodynamics and energy balances

ENGRD 219, Mass and Energy
Balances
ENGRD 221, Thermodynamics
7) Earth and life sciences

ENGRD 201, Introduction to the Physics and Chemistry of the Earth
8) Biology and chemistry

BIO S 101 and 103, Biological Sciences, Lecture and Laboratory
BIO S 105, Introductory Biology
BIO S 107, General Biology (summer only)
CHEM 389, Physical Chemistry I

## Liberal Studies Distribution

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts.

At least two courses must be chosen from category (a). No more than 3 credits toward this requirement may be taken in category (d) At least two courses in categories (a) or (b) must be from the same field of study. One of these courses must be at or above the 200level or be an explicit prerequisite of the other.
This new liberal studies distribution requirement affects engineering students graduating in 1994 or later. No combination of courses permitted under the previous rules should be excluded by the new rules,

No freshman seminar may be used to meet the liberal studies requirement.
Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising Office.

## a) Humanitles or History

Architecture, 181, 182
Art 317, 318
Africana Studies, 202, 204, 205, 211, 219, 280, 285, 344, 350, 360, 361, 370, 381, 405, 422, $425,431,432,455,460,471,475,482,483,490$
Anthropology 290, 355, 356, 420
Archeology (courses in Old World Archeology and 493)

## ENGINEERING - 1994-1995

Asian Studies (courses in Asian art, literature, religion or cultural history)
Classics (all courses except 356, 360, 361 and language courses)
Collective Bargaining, Labor Law and Labor History 100, 101, 303, 304, 305, 381, 384, 385, 386, 406, 482
Comparative Literature (all courses)
Economics 315, 323, 324, 325, 326
Engineering 250, 292
English (all courses except writing courses, whose numbers end in the 80s; e.g., 288, 289, 382, etc.
French Literature (all courses)
German Literature (all courses)
History (all courses)
History of Art (all courses)
International and Comparative Labor Relations 430
Italian Literature (all courses)
Jewish Studies 274, 351, 352
Labor Economics 448
Music (only introductory, music theory, and music history courses)
Natural Resources 407
Near Eastern Studies (courses listed under history, civilization, or literature)
Philosophy (all courses except courses in logic)
Religious Studies 101
Russian Literature (all courses)
Spanish Literature (all courses)
Theater Arts (only courses in Theater Studies, film analysis and history)
Women's Studies 227, 238, 273, 307, 336, 357 , 426

## b) Social Sciences

Africana Studies 171, 172, 190, 191, 231, 280, $290,301,302,344,345,346,352,382,400$, $410,420,451,460,481,484,485,495$
Agricultural Economics 100, 252, 332, 430 , 431, 450, 464, 492
Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)
Archeology (all courses except those in
Methodology and Technology)
Architecture 342
City and Regional Planning 100, 101, 218, 261, 314, 382, 404
Collective Bargaining, Labor Law and Labor History 384
Communication 116, 120, 314, 416
Consumer Economics and Housing (110, 111, 247 , and any course having one or more of these as a prerequisite)
Design and Environmental Analysis 150, 250
Economics (all courses except 105, 315, 317,
318, 319, 320, 326. Engineering students should generally take Economics 203-204 and not 101-102, unless they have had no calculus.)
Education, 210, 211, 212, 271, 310, 311, 317, 321, 322, 360, 378, 477

Engineering 360
Government (all courses)
Human Development and Family Studies (all courses)
Human Service Studies (all courses)
International and Comparative Labor Relations (all courses)
Labor Economics (all courses)
Linquistics (all courses)
Natural Resources 201
Organizational Behavior (all courses)
Psychology (all courses except 123, 307, 322,
$324,326,332,350,361,396,422,425,426$,
$429,465,470,471,472,473,475,476,478$, $479,492)$
Rural Sociology (all courses)
Sociology (all courses)
Textiles and Apparel 245
Women's Studies 210, 218, 220, 238, 244, 277, $281,297,305,321,353,362,365,366,372$, $406,408,425,428,438,450,454,463,468$, $479,480,493$

## c) Foreign Language

This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, then they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits according to these rules.

## d) Expressive Arts

Africana Studies 303, 425, 430
Art (studio courses)
Biological Sciences 208, 209
Communications (all courses)
Design and Environmental Analysis 101, 102, 114
Engineering (all Engineering Communications courses, which are designated ENGRC)
English (expository and creative writing
courses, whose numbers end in the 80 's, e.g., $288,289,382$, etc.)
Floriculture (courses in Freehand Drawing and Scientific Illustration)
Industrial and Labor Relations 452
Music (courses in musical performance and musical organizations and ensembles)
Theater Arts (all courses except those listed in category (a) above)

## Electives

## Phase I: Applicable through the Class of 1997

There are three kinds of electives: approved, free, and technical. Approved electives must be an appropriate part of an overall educational plan or objective.* This constraint allows flexibility for individual goals while maintaining a coordinated program. A free elective may be any course in the university, $\dagger$ although all course selections must be approved by the student's faculty adviser. Technical electives
are generally taken in the junior and senior years. They are usually upper-level courses in engineering, mathematics, or the physical sciences, but they also may be courses in other areas as designated by the student's field program.
Approved electives can help develop the skills of a broadly educated engineer, so students should give serious thought to their educational objectives and not propose approvedelective courses haphazardly. Advisers generally accept as approved electives: one introduction to engineering course, engineering distribution courses, courses stressing oral or written communication, upper-level engineering courses, advanced courses in mathematics, and rigorous courses in the biological and physical sciences. Courses in business, economics, and language are often approved by advisers when they serve a student's educational and academic objectives. In other cases, the student's interests are better served by approved electives that expand the field program or other parts of the curriculum, including the humanities and social sciences requirement.
-No ROTC courses may be used as approved electives unless they are co-listed by an academic department.
$\dagger$ Except supplementary courses and ROTC courses at the 100 and 200 level not colisted by an academic department. Up to 6 credits of ROTC courses at the 300 level or above may be used as free electives.
Additional ROTC courses not co-listed by an academic department may not be used to meet graduation requirements.
Phase II: Beginning with students in the Class of 1998
Six credits of approved electives are required. Approved electives can help develop the skills of a broadly educated engineer, so students should give serious thought to their educational objectives and not propose approvedelective courses haphazardly. Advisers generally accept as approved electives: one introduction to engineering course, engineering distribution courses, courses stressing oral or written communication, upper-level engineering courses, advanced courses in mathematics, and rigorous courses in the biological and physical sciences. Courses in business, economics, and language are often approved by advisers when they serve a student's educational and academic objectives. In other cases, the student's interests are better served by approved electives that expand the field program or other parts of the curriculum, including the humanities and social sciences requirement.*
In addition, nine credits of electives are determined by field approval. These electives are designated by the field program faculty and the field program faculty advisers. These electives are a part of a coordinated field curriculum, and students should refer to the Field Program curricula for descriptions of the field approved electives.
To ensure breadth of engineering studies, field programs also will include nine hours of courses outside the major.
Students are encouraged to take as many courses offered at the university in addition to the minimum engineering curriculum requirement as they wish.

No ROTC courses may be used as approved electives unless they are co-listed by an academic department

## Social Issues of Technology

It is important for engineers to realize the social and ethical implications of their work Consequently, in selecting their humanities, social sciences, approved electives, and free electives, students are urged to consider courses listed within the "Science, Technology, and Society" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

## Engineering Advising Office

From the time that students enter the college as freshmen until they become affiliated with a major field or the College Program after the fall term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office also offers general advising and counseling services, publishes a college newsletter, and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in engineering office provide additional specialized services.

To remain in good standing, students in the College of Engineering must apply to affiliate with a field by the end of the first term of their sophomore year. Transfer students from outside Cornell usually affiliate with a field of study on matriculation

## Freshman Year

At the end of the freshman year, students are expected to have completed or received credit for at least eight courses, including Math 191 Math 192, Chemistry 211 or 207, Physics 112, COM S 100 , two terms of Freshman Writing Seminars, and an Introduction to Engineering course. In addition, students need to complete two terms of physical education during their first year. Many variations in the fresbman scbedule are possible, depending on the individual student's background, advanced placement credit, and career goals. Those receiving advanced placement for first term calculus may take Physics 112 in term one. Students with an interest in bioengineering may take biology in terms one and two as approved electives. Students preparing to study medicine should take one year of biology and Chemistry 207 and 208 in the first year

## Field Program

The specific program for each field is described in the following pages. Students with a grade-point average of at least 2.0 who are making normal progress toward their degree are expected to apply for affiliation with a field program by the end of the first term of their sophomore year. Change of field affiliation is permitted in the following terms. If the change occurs during the fifth term or later, however, completion of the field program may require an additional semester of study.
Some fields require a specific engineering distribution course as a prerequisite for the
upperclass course sequence. These require ments are:
Chemical Engineering: ENGRD 219
Civil Engineering: ENGRD 202, ENGRD 219 (for environmental tract)

Computer Science: ENGRD 211 or ENGRD 212

Electrical Engineering: ENGRI) 230
Materials Science and Engineering: ENGRD 261

Mechanical Engineering: ENGRD 202
Operations Research and Engineering: ENGRD 270

## College Program

Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.
Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives.
Further information about the College Program may be obtained from the associate dean for undergraduate programs, 221 Carpenter Hall

## Bioengineering Option

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses ( 12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two from the bioengineering
course list. Each student interested in the bioengineering option can request through the Engineering Advising Office a bioengineering adviser who would assist the student in course selection for this option. The bioengineering adviser is in addition to the student's regular academic adviser

A list of approved courses is available in 221 Carpenter Hall.

## International Programs

An international perspective, sensitivity to other cultures, and the ability to speak a second language are increasingly important to roday's engineers. The College of Engineering encourages students to study or work abroad during their undergraduate years to prepare for participation in the global marketplace. A special International Scholars College Program is available for students to minor in international studies and study abroad during their junior year. As with other College Programs (see above), students apply in the first semester of their sophomore year. For further information on the International Scholars College Program and study or work abroad, contact Professor Richard Lance, 322 Thurston Hall; telephone: 255-5064. Information on co-op programs abroad is available from the Engineering Co-op Office in 148 Olin Hall.

## Dual Degree Option

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and a Bachelor of Arts degree can be earned in about five years. Students registered in the College of Engineering or the College of Arts and Sciences may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact the coordinator of dual degree programs, 172 Goldwin Smith Hall; the associate dean for undergraduate programs in 223 Carpenter Hall; or an adviser in Engineering Advising, 167 Olin Hall.

## Double Major in Engineering

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field in the normal way and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual field consultant offices.

## Engineering Communications Program

The ability to communicate effectively is an essential aspect of successful professional practice. The Engineering Communications Program offers instruction in written, oral, and visual presentation. Engineering Communications (ENGRC 350) and Writing for Engineering Managers (ENGRC 435) are three-credit seminar courses designed for students who desire intensive work in these areas. Examples from real-life engineering contexts are analyzed, and many specific assignments are presented as professional case studies Students learn to address audiences having different levels of technical expertise and to investigate the social and ethical implications of written and oral communication. These courses fulfill the college's technical writing
requirement (see Requirements for Graduation). The program also offers courses on topics of special interest and independent studies or projects in technical/professional communications. In addition to offering freestanding communications courses, the program works with engineering fields to integrate communications into technical courses. The program's faculty also advises student publications, facilitates writing and oral presentation competitions, and arranges discussions of professional communications with students and alumni. For further information, contact the director, 205 Carpenter Hall.

## EngIneering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineeringrelated enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.
Sophomores in the upper half of their class are eligible to apply for the co-op program. (Students in computer science and agricultural and biological engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.
Further information may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

## MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Comell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.
M.Eng.(Aerospace): Mechanical and aerospace engineering

## M.Eng.(Agricultural and Biological): <br> Agricultural and biological engineering

M.Eng.(Chemical): Chemical engineering
M.Eng.(Civil \& Environmental): Civil and environmental engineering
M.Eng.(Computer Science): Computer sciences
M.Eng.(Electrical): Electrical engineering
M.Eng.(Engineering Physics): Applied and engineering physics
M.Eng.(Geology): Geological sciences
M.Eng.(Materials): Materials science and engineering
M.Eng.(Mechanical): Mechanical and aerospace engineering
M.Eng.(Engineering Mechanics): Theoretical and Applied Mechanics
M.Eng.(Nuclear): Nuclear science and engineering
M.Eng.(OR\&IE): Operations research and industrial engineering
Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any one of the fields listed above. The microelectronics manufacturing option is offered in the fields of electrical engineering, engineering physics, materials science and engineering, and chemical engineering. Both specializations are attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.
An M.Eng. option of potential interest to engineers from all fields is the program in engineering management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng.(Civil \& Environmental) degree. A new management option in the M.Eng.(Chemical) degree program is also available.
Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S. Industrysponsored internships, which extend the program to two years, are also available to residents of the United States. Application forms and further information are available from the graduate field offices.

## Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which Comell students enter during their undergraduate career, makes it possible to eam the B.S., M.Eng., and M.B.A. in six years-one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students at Cornell interested in the six-year program should seek advice and information from the department with whose field they intend to affiliate during their upperclass years. Information about admission to either program and about special scholarship aid may be obtained from the Engineering Professional Programs Office, 148 Olin Hall.

## ACADEMIC PROCEDURES AND POLICIES

## Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students may qualify for AP credit in one of two ways:

1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or
2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before fall-term classes begin. Advanced placement is granted only to first-term freshmen, and the placement examinations are scored before the students begin classes.
Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.
3) They may enroll in a more advanced course in the same subject right away.
4) They may substitute an elective course from a different area.
5) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.
A detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced
Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

## Transfer Credit

Entering freshmen and entering transfer students who have completed courses at recognized and accredited colleges may. under certain conditions, have credits for such courses transferred to Comell. Such courses
must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.
College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit if students demonstrate academic proficiency by taking the appropriate CEEB or Comell departmental placement examination, as described above.
After matriculation no more than 18 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses at Cornell are the only exception to this rule.
A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet Advanced Placement and Transfer Cnedit for First-Year Engineering Students, available from Engineering Advising, 167 Olin Hall.

## Academic Standing

The requirements for good standing in the college vary slightly among the different divisions. First-term freshmen must have a grade point average of 1.7 or higher with no failing, unsatisfactory, or incomplete grades; must attain a minimum grade of C - in their common curriculum mathematics course; and must be making adequate progress toward the degree. Second-term freshman and sophomore requirements are the same, except that the grade-point average must be at least 2.0 . Upperclass requirements for good standing, graduation, and for satisfactory performance in courses that are prerequisite for field courses vary slightly for different fields of study, as specified in the following sections, the Engineering Undergraduate Handbook, or student handbooks prepared by the individual schools and departments.

## Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 or higher with no failing, unsatisfactory, or incomplete grades (even in physical education) and 12 credits or more of letter grades. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

## S-U Grades

The option of receiving a grade of "satisfactory" or "unsatisfactory" (S-U) in a particular course, rather than a grade on a graduated scale, may be selected only in the following circumstances. Students who want to take a course on an S-U basis must have completed at least one full semester of study at Cornell, and they may take only one course per semester on an S-U basis. Only courses in the liberal studies, approved electives, and free electives categories may be taken as S-U courses. Students may preregister for the S-U option. To change a grading option, a properly completed and approved add/drop form must be filed with the registrar of the College of Engineering by the end of the first three weeks of the semester. After this deadline, the grading option may not be
changed under any circumstances, even by petition, and no courses may be added with the S-U option selected.
The S-U policy does not apply to courses in physical education and other courses that are not taken to fulfill degree requirements.
When a particular course is offered only on an S-U basis, a student may petition to take a second S-U course in the same term.

## Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as fulltime students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.
Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses extramurally through the School of Continuing Education and Summer Sessions. Students who have been asked to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor's degree in engineering.
Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Comell Abroad office, 474 Uris Hall. Programs should be planned in consultation with Professor Richard Lance, 322 Thurston Hall, or with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

## Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Comell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.
Students who wish to transfer into the College of Engineering can make application to the Office of Engineering Admissions-application forms are available in the Carpenter Hall Annex. Students who would enter the college as second-semester sophomores or upperclassmen must be accepted by a field program as part of the admission process. Others may be accepted into the college without the requirement of field affiliation.
Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, and physics that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

## Leave of Absence and Withdrawal

Students may interrupt their studies for a period of time by taking a leave of absence. A formal petition must be filed and written approval granted. Leaves of absence are granted for a minimum of six months, and
can be granted for a period of up to two years. Credit earned while on leave of absence is subject to the limitation placed on extramural and transfer credit.
Students who voluntarily withdraw from the engineering degree program sever all connection with the college, and if they subsequently want to return, they must make a formal application for readmission. Students who fail to register in the first three weeks of the semester, without having received a leave of absence or permission for study in absentia, may be classified, by action of the faculty, as having withdrawn.

## ENGINEERING CAREER SERVICES

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. Also, interviews are arranged between students and more than 250 national companies that visit the campus to recruit technical graduates. A rêsumé referral service is also available. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Office of Engineering Placement and Career Services, 201 Carpenter Hall (255-5103).

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

L. P. Walker, M. F. Walter

## Bachelor of Science Curriculum

The Field Program in Agricultural and Biological Engineering prepares students for engineering practice in biological and physical systems represented in agriculture and its supporting industries and agencies, environmental or resource protection agencies, the biotechnological industries, the health industries, international enyineering, and the food industries. Engineering is applied to production, handling, storage, processing, distribution, and use of plant and animal products and biomass. Issues of environmental quality and safety and preservation of soil, water, and energy resources are important. Emerging areas of study include engineering aspects of biotechnology and animal and human health. Biological sciences are integrated into the field program along with engineering design and studies in the physical sciences. Areas of concentration include agricultural engineering, biological engineering, and environmental systems engineering.
The program is jointly administered by the College of Engineering and the College of Agriculture and Life Sciences. Students are enrolled only in the College of Agriculture and Life Sciences during their first four semesters and jointly in the College of Engineering in the remaining semesters. Engineering college tuition is required for one year and is typically
paid during the fifth and sixth semesters of study. Additional information about the program may be found in the section on the College of Agriculture and Life Sciences in this publication.
Graduates find employment in agricultural and food-related industries, environmentally related firms and agencies, and the biotechnology and health industries. Many graduates pursue a professional (Master of Engineering) or research (Master of Science or doctoral) degree. Agricultural and biological engineers are employed in private industry, consulting firms, government agencies, utility companies, and educational institutions. The unique blend of engineering and the biological sciences and the breadth of education of the agricultural and biological engineer is often attractive to employers.
For further details see the department's undergraduate programs publication, available at 104 Riley-Robb Hall, or contact the field's Coordinator of Instruction at 255-2499.
The field program requirements are outlined below
Basic Subjects Credits
Math 191, 192, 293, 294, Calculus for Engineers and Engineering Mathematics

Chem 211, General Chemistry, or equivalent
Phys 112, 213, 214, Physics I, II, and III (organic chemistry or biochemistry may be substituted for Physics 214)
Introductory biological sciences
ABEN 151, Introduction to
Computer Programming
ABEN 200, Undergraduate Seminar
Engineering distribution (two courses, including Mechanics of Solids)
Liberal studies (two freshman seminars and at least two courses in humanities or history)
Advanced and Applied Subjects
Engineering sciences in any field
(must include fluid mechanics and thermodynamics), plus ABEN 250 , 350 , and 496 (Engineering Applications in Biological Systems, Transport Principles, and Senior Design in Agricultural and Biological Engineering, respectively) and a minimum of three agricultural and biological engineering courses (at least 9 credits) chosen from courses numbered 450 to 495
Biological or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level)
Approved electives (at least 3 credits in the College of Agriculture and Life Sciences)
Total (minimum)

## Master of Engineering (Agricultural and Biological) Degree Program

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an
extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.
A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include aquaculture, agricultural engineering, biological engineering, energy, environmental resource engineering, food engineering, structures and their environments, and highway engineering. Engineering electives are chosen from among subject areas relevant to agricultural and biological engineering, such as thermodynamics, heat transfer and fluid mechanics, process engineering, mechanical design and analysis, theoretical and applied mechanics, structural engineering, hydraulics, environmental engineering, soil engineering, waste management and treatment, machine vision, and sensor technology.

## APPLIED AND ENGINEERING PHYSICS

R. A. Buhrman, director; M. S. Isaacson, associate director; B. W. Batterman, J. D. Brock, T. A. Cool, H. G. Craighead, H. H. Fleischmann, A. L. Gaeta, B. R. Kusse, R. V. E. Lovelace, T. N. Rhodin (emeritus), J. Silcox, W. W. Webb, F. W. Wise; dual appointments: K. B. Cady, D. D. Clark, V. O. Kostroun, R. L. Liboff, R. N. Sudan, G. J. Wolga; adjunct faculty: D. H. Bilderback; senior research associate: E. J. Kirkland

## Bachelor of Science Curriculum

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.
The industrial demand for graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-statedevice development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced
science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.
The engineering physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are A\&EP 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); A\&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A\&EP 363, Electronic Circuits (a sophomore/junior course); Physics 410, Advanced Experimental Physics; A\&EP 436, Physical and Integrated Optics (senior courses); and A\&EP 438, Computational Engineering Physics (a senior computer laboratory).
Undergraduates who plan to enter the Field Program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take Physics 112 or Physics 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course A\&EP 264. Engineering physics students need to take only two engineering distribution courses, since A\&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A\&EP 363 in the spring semester of the sophomore year. Students with a year of advanced placement in math may wish to enroll in A\&EP 321 and 322 in their sophomore year.
In addition to the requirements of the Engineering Common Curriculum,* the upperclass course requirements of the field program are as follows:
Course
Credits
A\&EP 333, Mechanics of Particles and Solid Bodies
A\&EP 355, Intermediate Electromagnetism
A\&EP 356, Intermediate Electrodynamics
A\&EP 361, Introductory Quantum Mechanics
A\&EP 363, Electronic Circuits 4
A\&EP 423, Statistical Thermodynamics 4
A\&EP 434, Continuum Physics
Physics 410, Advanced Experimental Physics
A\&EP 321, Mathematical Physics I;
Mathematics 421; or T\&AM 610
(applied mathematics)

A\&EP 322, Mathematical Physics II; Mathematics 422; or T\&AM 611 (applied mathematics)
Applications of quantum mechanics $\dagger$
3 or 4

## Four technical electives $\ddagger$

12-16
A third approved elective (in addition to the two required by the Common Curriculum)
Total field credits $=58$ credit hours minimum.
-The Engineering Common Curriculum allows students to take only 4 courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, inctividualized educational program in their latter years, and for best maintaining such options as a semester or year abroad, or early graduation.
†Some courses (though the list is not allinclusive) that will satisfy this requirement are Physics 444, Nuclear and High-Energy Particle Physics; Physics 454, Introductory Solid-State Physics; A\&EP 436, Physical and Integrated Optics; A\&EP 438, Computational Engineering Physics; A\&EP 440, Quantum and Nonlinear Optics; A\&EP 609, Low-Energy Nuclear Physics; ELE E 430, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.
$\ddagger$ If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.
Areas of concentration. A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of dual majors or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Michael S. Isaacson.
Electives need not be all formal course work: Qualified students are encouraged to
undertake informal study under the direction of a member of the faculty (A\&EP 490). This may include research or design projects in areas in which faculty members are active.
The variety of course offerings and many electives provide a sizable flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.
The Engineering Physics program requires a minimum GPA of 2.7 in all physics and mathematics courses before entering the Engineering Physics field. Once in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C - or better in specifically required courses, and to attain each term an overall grade point average of at least 2.3. In addition, students with a cumulative GPA of 3.5 or greater who elect to do an independent study project (A\&EP 490) are eligible for a degree "with honors."

## Master of Engineering (Engineering Physics) Degree Program

The M.Eng.(Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, microstructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.
One example of a specific area of study is solid-state physics and chemistry as applied to microstructure science and technology. Core courses in this specialty include the microcharacterization of materials (A\&EP 661) and the microprocessing and microfabrication of materials (A\&EP 662). The design project may focus on such areas as semiconductor materials, device physics, microstructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.
Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)
2) an integrated program of graduate-level courses, as discussed below ( 14 to 20 credits)
3) a required special-topics seminar course ( 4 credits)
The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.
The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.
Students interested in the M.Eng.(Engineering Physics) degree program should contact Professor R. V. E. Lovelace.

## APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, Engineering and Theory Center Building.
There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in applicationoriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.
A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and
Programs."

## CHEMICAL ENGINEERING

W. L. Olbricht, director; A. B. Anton, P. Clancy, C. Cohen, T. M. Duncan, J. R. Engstrom, K. E. Gubbins, D. A. Hammer,
P. Harriott, D. L. Koch, R. P. Merrill,
A. Panagiotopoulos, F. Rodriguez,
M. L. Shuler, P. H. Steen, W. B. Streett

## Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 as an approved elective during the freshman year. The program for the last three years, for students who have taken two engineering distribution courses during the first year and entered Cornell before Fall 1994 is as follows:

## Term 3

Credits
Math 293, Engineering Mathematics 4
Phys 213, Electricity and Magnetism
Chem 389, Physical Chemistry
(approved elective)
CHEME 219 (engineering
distribution course)
Humanities or social sciences course 3
Term 4
Math 294, Engineering Mathematics
Phys 214, Optics, Waves, and Particles 4
Chem 290-390, Physical Chemistry
Engineering distribution course
Humanities or social sciences course

## Term 5

Chem 253, Organic Chemistry** 4
Chem 251, Organic Chemistry Laboratory 2
CHEMF. 313, Chernical Engineering Thermodynamics
CHEME 323, Fluid Mechanics
Humanities or social sciences course

## Term 6

Applied Science elective $\dagger$
CHEME 101, Nonresident Lectures
CHEME 324, Heat and Mass Transfer
CHEME 332, Analysis of Separation

## Processes

CHEME 390, Reaction Kinetics and Reactor Design
Humanities or social sciences course
Term 7
CHFME 432, Chemical Engineering
Laboratory

Electives*

Humanities or social sciences course 3
Term 8
CHEME 462, Chemical Process Design4
CHEME 472, Process Control ..... 3
Electives* ..... 3
Humanities or social sciences course ..... 3
*The electives in terms seven and eight comprise 6 credits of technical electives, and 3 credits of CHEME process or systems elective. CHEME process or systems electives include CHEME 564, Design of Chemical Reactors; CHEME 566, Systematic Methods for Process Design; CHEME 640, Polymeric Materials; CHEME 643, Introduction to Bioprocess Engineering; CHEME 656, Separations Using Membranes or Porous Solids; CHEME 661, Air Pollution Control.
${ }^{* *}$ Chemistry 357 may be substituted for CHEM 253. The applied science elective must then be CHEM 358.
$\dagger$ Applied science electives include Biological Sciences 290, General Microbiology Lectures; Biological Sciences 330 and 331, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEME 640, Polymeric Materials; CHEME 673, Adsorption and Reactions on Chemically Reactive Solids; Food Science 409, Food Chemistry; MS\&E 331, Structure of Materials; MS\&E 332, Electrical and Magnetic Properties of Materials; MS\&E 441, Microprocessing of Materials; MS\&E 449, Introduction to Ceramics; MS\&E 452, Properties of Solid Polymers; any A\&EP course numbered 333 or above; any Chemistry course numbered 301 or above; any Physics course numbered 300 or above.
Students entering in Fall 1994 or later should contact the field office for a copy of the curriculum.

## Master of Engineering (Chemical) Degree Program

The professional master's degree,
M.Eng.(Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.
Specific requirements include

1) two courses in advanced chemical engineering fundamentals chosen from CHEME 711, 713, 731, 732, and 751
2) two courses in applied chemical engineering science chosen from CHEME $564,566,640,643,656$, and 661
3) a minimum of 3 credits of a design project, CHEME 565
Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

## CIVIL AND ENVIRONMENTAL ENGINEERING

A. H. Meyburg, director; M. J. Sansalone, associate director; J. F. Abel, J. J. Bisogni, Jr., W. H. Brutsaert, G. G. Deierlein, R. I. Dick, P. Gergely, J. M. Gossett, M. D. Grigoriu, D. A. Haith, K. C. Hover, A. R. Ingraffea, G. H. Jirka, F. H. Kulhawy, J. A. Liggett, L. W. Lion, P. L-F. Liu, D. P. Loucks, W. R. Lynn, L. K. Nozick, T. D. O'Rourke, T. Peköz, W. D. Philpot, R. E. Schuler, C. A. Shoemaker, J. R. Stedinger,
H. E. Stewart, M. A. Turnquist, R. N. White

## Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the degree of civil engineer: civil engineering or environmental engineering. Within civil engineering, students may emphasize structural engineering, technical engineering, hydraulics and hydrology, and transportation. The environmental engineering curriculum emphasizes study of environmental engineering, environmental and water resource systems, and hydraulics and hydrology. Sample curricula are available in the school office, 220 Hollister Hall.
Students planning to enter the Field Program in Civil and Environmental Engineering are required to take ENGRD 202, Mechanics of Solids, either before or during the sophomore year.
Required and Recommended Engineering Distribution Courses:

The recommended engineering distribution course for students planning to enter the environmental engineering curriculum is ENGRD 219, Mass and Energy Balances. Students entering the environmental curriculum who have not taken ENGRD 219 will be required to do so as part of the Field Program.
Recommended engineering distribution courses for students planning to enter the civil engineering curriculum are:
ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or hydraulics/ hydrology;
ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering; or
ENGRD 211, Computers and Programming, for students interested in transportation.

## Field Program:

## Environmental Engineering

For the Field Program in Environmental
Engineering, students must take CHEM 208 in place of PHYS 214. The following courses are required in addition to those required for the Common Curriculum:
Courses Credits
ENGRD 241, Engineering Computation*
3
CEE 351, Environmental Quality
Engineering
CEE 331, Fluid Mechanics 4
CHEM 253, Elementary Organic Chemistry
BIO S 290, General Microbiology, Lectures

CEE 304, Uncertainty Analysis
in Engineering

## CEE 323, Engineering Economics

CEE 341, Introduction to Geotechnical Engineering
ABEN 475, Environmental System Analysis
Additional requirements include a set of three field approved electives and two design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

## Civil Engineering

As of the priting of this Courses of Study, final details are unavailable on the Civil Engineering curriculum. The following is tentative, and final details may be obtained beginning in Fall 94 from the school office.
For the Field Program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. A set of courses from the following list of courses will be required in addition to those required for the Common Curriculum.

## Courses

Credits
ENGRD 241, Engineering Computation*
ENGRD 203, Dynamics
CEE 304, Uncertainty Analysis in Engineering $\dagger$

CEE 323, Engineering Economics

## CEE 331, Fluid Mechanics

CEE 341, Introduction to Geotechnical Engineering
CEE 351, Environmental Quality Engineering

CEE 361, Transportation Engineering

## CEE 371, Structural Behavior

Additional requirements include a set of three field approved electives and two design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.
"ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement.
$\dagger$ ENGRD 270 may be accepted (on petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.
These field program requirements will apply to all students in the Class of 1998, and students in the Class of 1997 are strongly encouraged to follow these new curriculum options as well.

## Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a $30-$ credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broadbased background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30 -credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, fulltime, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 503) and a twocourse design project (CEE 501 and 502)
2) Specialization in a major-three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering
3) Two courses in a single related or minor area
4) Technical electives (up to two courses) Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Management Practice (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval
The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration
degrees. See the introductory section under College of Engineering

Applications for the six-year B.S./M.Eng. M.B.A. program must be submitted at the beginning of the sixth term of study.

## COMPUTER SCIENCE

R. L. Constable, chair; K. Birman, B. Bloom, C. Cardie, T. Coleman, B. Donald, D. Gries, J. Hartmanis, T. Henzinger, J. E. Hopcroft,
D. Huttenlocher, D. Kozen, P. Pedersen,
K. Pingali, M. Rauch, R. A. Rubinfeld,
G. Salton, F. B. Schneider, B. Smith,
D. Subramanian, R. Teitelbaum, S. Toueg, N. Trefethen, C. Van Loan, S. Vavasis, T. vonEicken, R. Zabih

## Bachelor of Science Curriculum

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process.
A student entering the Field Program in Computer Science must take COM S 211 or 212 and COM S 280 before beginning the upperclass sequence. Students who do not earn a grade of B - or better in both COM S 211 or 212 and COM S 280 are strongly advised against attempting the computer science field program. Students who have not maintained an average of at least 3.0 in the mathematics courses required by the Common Curriculum are also discouraged from entering the program. Apart from these requisites and those of the college, the courses required for the Field Program in Computer Science are:

## Course Work

Credits
Systems sequence
COM S 314, Systems and Organization
COM S 410, Data Structures
COM S 414, Systems Programming and Operating Systems

Theory sequence
8
COM S 381 or 481 , Theory of Computing
COM S 482, Analysis of Algorithms
Numerical Analysis
COM S 222, Scientific Computation, or
COM S 421, Numerical Solutions of Algebraic Equations

## Computer science electives

Two nonrequired computer science courses numbered 400 or above,* plus a laboratory project course (for example, COM S 413, 415, $418,433,463$, or 473).
Related electives 14-16
One mathematically oriented course plus three courses forming an upper-level concentration in mathematics, operations research, electrical engineering, or another technical area.
*Must be three or more credits.
For more information, refer to the Computer Science Undergraduate Handbook, available from 303 Upson Hall
The performance of students in the Field of Computer Science is reviewed each term. To remain in good standing with the department, they must have an overall term average of at least 2.3 with no courses failed and a term average for field program courses of at least 2.7 with no course grade less than $C$-, and
they must be making satisfactory progress in the field.

Note: Computer Science majors are expected to take COM S 280 and COM S 314. ELE E 230 will only be counted toward the course requirements of Computer Science majors who are double majoring with Electrical Engineering.

## Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S.
M.Eng.(Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students should contact the assistant director of undergraduate programs in Upson Hall

## Master of Engineering (Computer Science) Degree Program

The one-year program leading to the degree of M.Eng. (Computer Science) admits forty to seventy students a year. A strong undergraduate background in computer science or a related field is required. Early admission is available for Comell seniors who apply in the fall semester

The emphasis of the curriculum can be on programming languages and systems or theory of algorithms and theory of computation or numerical analysis, artificial intelligence, or information processing, which includes databases and information organization and retrieval. The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language, or the solution of a significant engineering problem using computer science techniques.

## ELECTRICAL ENGINEERING

J. S. Thorp, director; J. M. Ballantyne, T. Berger, A. W. Bojanczyk, G. M. Brown H.-D. Chiang, R. C. Compton,
H. G. Craighead, D. F. Delchamps,
L. F. Eastman, D. T. Farley, T. L. Fine, C. Heegard, C. R. Johnson, Jr., M. C. Kelley,
P. M. Kintner, R. Kline, J. P. Krusius,
M. E. Leeser, R. L. Liboff, Y.-H. Lo,
N. C. MacDonald, P. R. McIsaac, J. A. Nation,
N. F. Otani, T. W. Parks, A. Phillips Jr.,
C. R. Pollock, C. Pottle, A. P. Reeves,
C. E. Seyler, Jr., J. R. Shealy, R. N. Sudan,
C. L. Tang, R. J. Thomas, H. C. Torng,
C. B. Wharton, G. J. Wolga

## Bachelor of Science Curriculum

The undergraduate Field Program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline.
Concentrations include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma
physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

## New Curriculum (starting with Class of 1998)

Students planning to enter the Field Program in Electrical Engineering must take ELE E 230, Introduction to Digital Systems, as an engineering distribution course. The fall of the sophomore year is the preferred term for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are encouraged to take COM S 211 as an
engineering distribution course prior to entry into the field program. In addition, the field program begins normally in the spring of the sophomore year, as shown below. Many of these courses are taught only once a year, either spring or fall, as indicated in the course descriptions.

## Course

Credits

## Field Requined Courses

ELE E 210, Introduction to
Electrical Systems
ELE E 215, Electrical Systems Laboratory

## ELE E 301, Electrical Signals and

 Systems IELE E 303, Electromagnetic Waves and Fields I
ELE E 315, Electrical Laboratory 4
A choice of three courses from among: 12
ELE E 302, Electrical Signals and Systems II
ELE E 304 Electromagnetic Waves and Fields II
ELE E 306, Fundamentals of Quantum and Solid State Electronics

ELE E 308, Fundamentals of Computer Engineering
ELE E 310, Probability and Random Signals*

## Field Elective Courses

Electrical Engineering Approved Electivest
Electives Outside Field $\ddagger$ (3 courses)

## Total minimum field credits

*ELE E 310 can be taken in place of ENGRD 260 or 270 or TAM 310 to satisfy the college application of probability and statistics requirement.
$\dagger$ Must include two electrical engineering laboratory courses.
$\ddagger$ See Electrical Engineering Handbook for detailed definitions.

All students graduating with a B.S. degree must fulfill the engineering design require ment. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available in the electrical engineering undergraduate program office.
At least one of the required electrical engineering laboratory courses must be selected from a list including ELE E 320, 425, $430,453,457,475$ and 530 . The other may be selected from the above list or from among

ELE E 423, 426, 433, 451, 452, 471, 472, 481, $526,536,539,554$, and 558 . Note, however, that ELE E 539 counts as one electrical engineering laboratory course.
Undergraduate specialization is achieved through the various electrical engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates.

Maximum technical course scheduling flexibility in the field program is preserved only for those students who do not complete their 6 credits of college approved electives prior to entry into the field program. Accordingly, intended electrical engineering students are advised to consider course selection carefully during their first three terms in engineering.
An electrical engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires additional courses, a required undergraduate research or design project, and an honors thesis. Details are available in the 1994-95 Electrical Engineering Handbook.

Students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin the Master of Electrical Engineering program in their last semester of undergraduate course work so long as 8 or fewer credits remain toward B.S. degree requirements and a 3.0 GPA has been maintained
All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than Cmay be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester in the Field Program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical Engineering Handbook to remain active participants.

## Former Curriculum (applicable through

 Class of 1997)Students planning to enter the Field Program in Electrical Engineering must take ELE E 210, Introduction to Electrical Systems, as an engineering distribution course. In addition, the field program requires twelve courses, as shown below. Many of these courses are taught only once a year, either spring or fall, as indicated in the course descriptions.

## Course

Credits
ELE E 230, Introduction to Digital Systems
ELE E 301, Electrical Signals and Systems I
ELE E 303, Electromagnetic Waves and Fields I

ELE E 315, Electrical Laboratory
A choice of three courses from among: ELE E 302, Electrical Signals and Systems II
ELE E 304, Electromagnetic Waves and Fields II
ELE E 306, Fundamentals of Quantum and Solid State Electronics ELE E 308, Fundamentals of Computer Engineering
ELE E 310, Probability and Random Signals
ELE E 310 can be taken in place of ENGRD
260, T\&AM 310, or ENGRD 270 to satisfy the college application of probability and statistics requirement.
Electrical engineering electives
with laboratory ( 3 courses)
Electrical engineering electives ( 2 courses) 6

## Total field credits

"Credits in excess of 46 may be used to fill approved-, technical-, or free-elective requirements of the College Curriculum.
All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available in the undergraduate program office.
Electrical engineering electives may be selected from all courses taught in electrical engineering. At least one of the required electrical engineering electives with laboratory must be selected from a list including ELE E $318,320,425,430,453,457,475$, and 530. The other two may be selected from the above list or from among ELE E 423, 426, 433, 451, 452, 471, 472, 481, 526, 536, 539, 554, and 558. (If ELE E 539 is taken for 6 credits, it counts as two courses. One course will count as an ELE E elective with laboratory, and the other credits may be used as electrical engineering electives or to meet any other degree requirement that can be satisfied by a 500-level technical course credit.)
Specialization is achieved through the five electrical engineering elective courses, as well as other courses in electrical engineering or related subjects taken as technical, approved, or free electives. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates. Students with advanced standing frequently take one or more graduate-level courses prior to graduation.
Students majoring in electrical engineering are expected to meet the following academic standards:

1) Students must achieve a grade-point average of at least 2.3 every semester.
2) No course with a grade of less than Cmay be used to satisfy degree requirements in the field program or technical elective categories, or serve as a prerequisite for an electrical engineering course. (It may count as a free or possibly an approved elective, however, unless it must be repeated.)
3) Students must complete ELE E 301, 303, and 315 by the end of the first semester of
the junior year, and accumulate at least 10 credits each semester toward the remaining degree requirements in the field program and technical elective categories

## Master of Engineering (Electrical) Degree Program

The M.Eng.(Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.
The program requires 30 credits of advanced technical course work, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8 -credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 8 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.
Although admission to the M.Eng. (Electrical) program is highly competitive, all wellqualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

## GEOLOGICAL SCIENCES

B. L. Isacks, chair; R. W. Allmendinger, K. Attoh, M. Barazangi, W. A. Bassett, J. M. Bird, A. L. Bloom, L. D. Brown,
L. M. Cathles, J. L. Cisne, T. E. Jordan,
D. E. Karig, R. W. Kay, S. Mahlburg Kay, F. H. T. Rhodes, W. B. Travers, D. L. Turcotte, W. M. White

## Bachelor of Science Curriculum

Study in geological sciences is offered for engineering students who are preparing for careers in solid-earth sciences and for those who want a broad background in the geological sciences as preparation for careers in other engineering fields. The Department of Geological Sciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.
All geology majors take substantially the same set of upper-level geology courses regardless of their college affiliation. The difference between the curricula for students in engineering (B.S.-degree candidates) and those in arts and sciences (B.A.-degree candidates) is in their respective college requirements such as distribution courses, languages, social sciences, and humanities requirements. Both B.S.- and B.A.-degree programs stress a balanced overview of geology, without specialization. Within the B.S.-degree program, substantial specialization can be achieved by careful selection of field approved electives.

Students in the College of Engineering who may wish to affiliate with the Field Program of Geological Sciences may take ENGRI 122 as a distribution course. As a prerequisite for the major, they should take either GEOL 101 or 103 as a field approved elective or take GEOL 201 (ENGRD 201), preferably during their freshman or sophomore year. For those interested in geobiology, BIO S 101-103 and 102-104 are recommended. Chemistry 208 may be substituted for PHYS 214 with approval of the adviser.
Geological Sciences requires the following courses for the engineering major: GEOL $210,214,326,355,356,375$, and 388 . GEOL 210 plus 214 count as one course for purposes of graduation requirements. At least two field approved electives should be GEOL 300-, 400, or 600 -level courses. A summer field geology course is also required.
Core courses may be taken in any reasonable sequence, except that GEOL 355, which is offered in the fall, should be taken before GEOL 356, which is offered in the spring. GEOL 326, 355, 356, and 375 should be taken relatively early in the major program as preparation for the summer field camp, which usually follows the junior year. Students with adequate preparation may attend field camp at an earlier time.
It is recommended that students intending to specialize in geopbysics select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.
A\&EP 333, Mechanics of Particles and Solid Bodies
A\&EP 355, Intermediate Electromagnetism
A\&EP 356, Intermediate Electrodynamics
A\&EP 434, Continuum Physics
Phys 410, Advanced Experimental Physics
T\&AM 310-311, Advanced Engineering Analysis I and II
It is recommended that students intending to specialize in geochemistry (including petrology and mineralogy) select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.

## CEE 654, Aquatic Chemistry

Chem 207, 208, General Chemistry
Chem 287-288, Introductory Physical Chemistry
Chem 300, Quantitative Chemistry
Chem 301, Experimental Chemistry I
Chem 302, Experimental Chemistry II
Chem 303, Experimental Chemistry III
Chem 357-358, Introductory Organic Chemistry
Chem 389-390, Physical Chemistry I and II
MS\&E 331, Structural Characterization and Properties of Materials
MS\&E 335, Thermodynamics of Condensed Systems
It is recommended that students intending to specialize in geobiolog $y$ select most of their
field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students' choice of other electives outside the major field.

Bio S 241, Introductory Botany
Bio S 261, Ecoliogy and the Environment
Bio S 274, Functional and Comparative Morphology of Vertebrates
Bio S 371, Human Biology and Evolution Bio S 373, Biology of the Marine Invertebrates Bio S 448, Plant Evolution and the Fossil Record
Bio S 378, Evolutionary Biology
Chem 253, Elementary Organic Chemistry
It is recommended that students who want to pursue further training or immediate employment in applied geology (environmental and engineering geology, geohydrology, petroleum geology, or geological engineering) select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents, with two of the four from the same field; these guidelines also apply to the students' choice of other electives outside the major field.
GEOL 204 (also SCAS 371 and ABEN 371), Hydrology and the Environment
ABEN 475, Environmental Systems Analysis
ABEN 671, Analysis of the Flow of Water and Chemicals in Soils
SCAS 361, Genesis, Classification, and
Geography of Soils
SCAS 366, Soil Chemistry
SCAS 667, Soil Physics
CEE 331, Fluid Mechanics
CEE 332, Hydraulic Engineering
CEE 341, Introductory Soil Mechanics
CEE 351, Environmental Quality Engineering
CEE 611, Remote Sensing Applications
CEE 612, Physical Environment Evaluation
CEE 615, Digital Image Processing
CEE 633, Flow in Porous Media and Groundwater
CEE 640, Foundation Engineering
MS\&E 331, Structural Characterization and Properties of Materials
MS\&E 445, Mechanical Properties of Materials
OR\&IE 260, Introductory Engineering Probability
OR\&IE 370, Introduction to Statistical Theory with Engineering Applications
Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses and should select most of their field approved electives from the groups of courses listed above for geochemistry and applied geology plus the following additional courses; these guidelines also apply to the students' choice of other electives outside the major field.
CEE 654, Aquatic Chemistry
CEE 741. Rock Engineering

Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field approved electives from the same field, at a level comparable to the courses listed above. The electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GFOL 491 and 492, Undergraduate Research, for a fourth-year field approved elective.
Students intending to pursue graduate study in geology are reminded that some graduate schools require proficiency in reading the scientific literature in one or two of the three languages, French, German, and Russian. Undergraduate preparation in foreign languages is advantageous for many careers, as well.

## Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) degree is intended to provide future professional geologists with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Students may choose a program from one of several options, or tailor a program to meet their special interests with the help of a faculty adviser.
The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.

## MATERIALS SCIENCE AND ENGINEERING

C. Y. Li, director; D. G. Ast, J. M. Blakely, R. Dieckmann, E. Giannelis, D. T. Grubb, E. J. Kramer, C. S. Nichols, C. Ober, R. Raj, A. L. Ruoff, S. L. Sass, M. O. Thompson

## Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take MS $\$ E 261$, Introduction to Mechanical Properties of Materials, or MS\&E 262, Introduction to Electrical Properties of Materials, before the end of their junior year. They are strongly urged to take it as an engineering distribution course during their sophomore year. Students in materials science and engineering must concentrate in a specialization which may cover areas such as materials science, solid state, metallic materials, ceramic materials, polymeric materials, or electronic materials. Specialization is achieved through the selection of technical electives in the junior and senior years. The materials science and engineering field program leading to the Bachelor of Science degree consists of

Courses
Credits
MS\&E 331, Structural Characterization of Materials 4
MS\&E 332, Electrical and Magnetic
Properties of Materials
3
Field-approved electives* 6
MS\&E 335 Thermodynamics of Condensed Systems 4
MS\&E 336, Kinetics, Diffusion, and Phase Transformations
MS\&E 441, Microprocessing of Materials 3
MS\&E 442, Macroprocessing of Materials 3
MS\&E 443/435, Senior Materials
Laboratory I or Senior Thesis I
MS\&E 444/435, Senior Materials
Laboratory II or Senior Thesis II
MS\&E 445, Mechanical Properties of Materials
MS\&E 447, Materials Design
Concepts I \& II
37/39
*These courses serve as two of the four required specialization courses. The other specialization courses are technical electives. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.
Students without two semesters of chemistry must select a chemistry-related course as one of their specialization courses (e.g., MS\&E 414, MS\&E 452, CHEM 253). To continue in good standing in the Field of Materials Science and Engineering, students must

1) Maintain an overall 2.0 term average
2) Maintain an average of 2.3 , with no grade below $C$, in the department's basic curriculum.
3) Complete MS\&E 261 or 262 prior to the end of the junior year.
The department's basic curriculum consists of all the required MS\&E courses including MS\&E 261 and the four courses comprising the student's area of specialization.
An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved. Students are urged to plan such curricula as early as possible.

## Master of Engineering (Materiais) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng.(Materials) program. This program consists of 30 credits, including course work and a master's design project.

The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although analytical projects are also possible.
Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS\&E. One 3 -credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS\&E undergraduate requirements.

## MECHANICAL AND AEROSPACE ENGINEERING

The Sibley School of Mechanical and Aerospace Engineering is concluding a complete review of course offerings and degree requirements. As this announcement goes to press, there are undetermined aspects of implementing the new curriculum requirements approved by the school and by the college. Students are strongly encouraged to check with their adviser and with the school office ( 112 Upson Hall) about new course offerings, modifications, and cancellations. It is likely that some courses will be offered in semesters other than indicated below.
D. A. Caughey, director; P. L. Auer,
C. T. Avedisian, D. L. Bartel, J. F. Booker, I. D. Boyd, A. H. Burstein, P. R. Dawson, P. C. T. deBoer, E. M. Fisher, A. R. George, F. C. Gouldin, S. Kannapan, S. Leibovich, M. Y. Louge, J. L. Lumley, M. P. Miller, F. C. Moon, F. K. Moore, R. M. Phelan, S. B. Pope, M. L. Psiaki, E. L. Resler, Jr., S.-f. Shen, D. L. Taylor, K. E. Torrance, H. B. Voelcker, K. K. Wang, Z. Warhaft, R. Warkentin, C. H. K. Williamson, N. Zabaras

Members of the faculty of the graduate Fields of Aerospace Engineering and Mechanical Engineering are listed in the Announcement of the Graduate School.

## Bachelor of Science Curriculum In Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.
Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and beattransfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of
engineering activity (including pollutants and noise), and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering; heat, energy, and power engineering; and thermo-fluid sciences.
Affiliation: The Mechanical Engineering Program strongly encourages affiliation before sophomore pre-registration to optimize course selection and flexibility. The program is structured so that students affiliating as late as the first term of the sophomore year are not at a disadvantage.
The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering Program take ENGRD 202 (also T\&AM 202) as an engineering distribution course. They also are urged to take ENGRD 221 (also M\&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course.
The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five elective courses ( 24 credits).
The eleven required courses are:
M\&AE 212, Mechanical Properties and Processing of Engineering Materials
M\&AE 221, Introduction to Thermodynamics
M\&AE 225, Mechanical Design and Synthesis
T\&AM 203, Dynamics
ELE E 210, Introduction to Electrical Systems M\&AE 323, Introduction to Fluid Mechanics M\&AE 324, Heat Transfer
M\&AE 325, Mechanical Design and Analysis
M\&AE 326, System Dynamics
M\&AE 427, Fluids/Heat Transfer Laboratory
M\&AE 428, Engineering Design
The five elective courses are chosen from lists approved by the faculty of the Sibley School of Mechanical and Aerospace Engineering. Students are urged to discuss elective choices with their adviser and to visit the undergraduate office in Upson 112 for more detailed description of restrictions and allowable courses. Because of recent changes in curriculum and early deadlines for printing, a complete description of the structure for electives cannot be included here.
One elective must be a mathematics course that is taken after T\&AM 294 and that includes statistics. Typically this mathematics elective is T\&AM 310 or OR\&IE 270.
The electives must include a design course chosen from a designated list and taken in the senior year.
The electives must include two courses that satisfy the requirements of one of the
upperclass concentrations. Typically these are two courses chosen from an appropriate subset of the school's upperclass offerings. A list of concentrations and courses is available in Upson 112.
An additional graduation requirement of the field program is proof of elementary comperence in technical drawing. The demonstration of competence is expected before completion of M\&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of
a. a technical drawing course in high school or in a community college,
b. ENGRG 101, Drawing and Engineering Design,
c. another technical drawing course at Cornell, or
d. a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M\&AE 389.
The writing requirement of the Common Curriculum is satisfied by M\&AE 427.
Introduction to Electrical Systems (ELE E 210) may be replaced or supplemented by Introductory Electronics (PHYS 360).
A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.
Applicability: The curriculum requirements described above apply to the Class of '98 and beyond. Graduates of the Classes of '95, '96, and ' 97 may choose to complete their studies under the previous requirements or those described above. More detailed materials describing the Mechanical Engineering Program and possible concentrations may be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

## Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M\&AE 305, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

## Master of Engineering (Aerospace) Degree Program

The M.Eng.(Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in current technology and engineering design. This degree requires 30 credits of course work and is subject to the rules adopted by the Graduate Professional Program Committee. Because aerospace engineering is continually engaged in new areas, an essential guideline for the program is to reach beyond present-day practices and techniques. This is achieved by supplying the
student with the fundamental background and the analytical techniques that will remain useful in all modern engineering developments. Aerospace students register for 1 credit a term on an S-U basis in M\&AE Colloquium (M\&AE 799). All other courses must have letter grades. To fulfill the design project requirement, students register for M\&AE 592, Seminar and Design Project in Aerospace Engineering, for 2 credits per term. Other requirements are four aerospace core courses (minimum of 12 credits), two math courses ( 6 credits), and two technical electives ( 6 credits).

Changes in the requirements for the M.Eng. (Aerospace) degree are anticipated. Students should check with the field office ( 104 Upson Hall) to find out the current requirements.

## Aerospace Core Courses

3 credits:
M\&AE 459, Introduction to Controlled Fusion
M\&AE 506, Aerospace Propulsion Systems
M\&AE 507, Dynamics of Flight Vehicles
M\&AE 543, Combustion Processes
M\&AE 601, Foundations of Fluid Dynamics and Aerodynamics
M\&AE 602, Fluid Dynamics at High Reynolds Numbers
M\&AE 608, Physics of Fluids
M\&AE 651, Advanced Heat Transfer
M\&AE 670, Finite Elment Analysis for
Mechanical and Aerospace Design
M\&AE 732, Analysis of Turbulent Flows
M\&AE 733, Stability of Fluid Flow
M\&AE 734, Turbulence and Turbulent Flow
M\&AE 736, Computational Aerodynamics
M\&AE 737, Computational Heat Transfer and Fluid Mechanics
Nominations of Special Committee chair (adviser) must be filed with the Graduate School within three weeks of the start of classes. A formal selection of course work for the term must be filed within three weeks of the start of classes. A program of courses must be submitted for committee approval by the end of the first week of classes.
The school has particular strengths in the areas of fluid dynamics, aerodynamics, high temperature gasdynamics, turbulence, chemical kinetics, aerodynamic noise, sonic boom, nonlinear waves, atmospheric flows, combustion processes in low-pollution engines, and solution of flow problems by numerical methods. Professional design projects may be arranged in any of these areas.

## Master of Engineering (Mechanical) Degree Program

The M.Eng.(Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in current technology and engineering design.
The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These areas include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing
engineering, mechanical systems and design, and CAD/CAM (computer-aided design/ computer-aided manufacturing). An individual student's curriculum includes a 4 -credit design course, a major consisting of a minimum of 12 credits, and sufficient technical electives to meet the degree requirement of 30 credits. It is highly recommended that students register for 1 credit per term on an S-U basis in M\&AE Colloquium (M\&AE 799). The design projects may arise from individual faculty interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.
A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of overall objectives and a statement of purpose for the major, is submitted for approval to the Master of Engineering Committee by the end of the first week of class. Any subsequent changes must also be approved by this committee.
The courses that constitute the major must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. At least 24 credits of the total for the degree must be in mechanical engineering or related areas, and in general all courses must be beyond the level of those required in the undergraduate program in mechanical engineering. Credit may be granted for an undergraduate, upper-level first course in some subject area if the student has done little or no previous work in that area, but such courses must have the special approval of the Master of Engineering Committee.
The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.
Changes in the requirements for the M.Eng. (Mechanical) degree are anticipated. Students should check with the field office ( 104 Upson Hall) to find out the current requirements.
Students enrolled in the M.Eng.(Mechanical) program may take courses that also satisfy the requirements of the Cornell Manufacturing Engineering and Productivity Program (COMEPP), leading to a special dean's certificate in manufacturing engineering. The Energy Engineering option can also lead to a special dean's certificate.

## NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include K. B. Cady (faculty representative), D. D. Clark, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire

## Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

## Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the Announcement of the Graduate School.
The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.
The following courses are included in the 30 credit program:

## Fall term

NS\&E 509, Nuclear Physics for Applications
A\&EP 612, Nuclear Reactor Theory
A\&EP 633, Nuclear Engineering
Technical elective

## Spring term

A\&EP 651, Nuclear Measurements Laboratory
Technical elective
Engineering design project
Mathematics or physics elective
Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list
below gives typical electives.
M\&AE 651, Advanced Heat Transfer
ELE E 581, Introduction to Plasma Physics
ELE E 582, Advanced Plasma Physics
ELE E 589, Magnetohydrodynamics
ELE E 471, Feedback Control Systems
ELE E 472, Digital Control Systems
A\&EP 636, Seminar on Thermonuclear Fusion Reactors
A\&EP 638, Intense Pulsed Electron and Ion Beams: Physics and Technology
NS\&E 484, Introduction to Controlled Fusion: Principles and Technology
NS\&E 637, Advanced Topics in Plasma Diagnostic Techniques
MS\&E 459, Physics of Modern Materials Analysis

## Energy Engineering Option

Nuclear Science and Engineering is one of the M.Eng. fields participating in the Energy Engineering Option. Two energy-conversion courses, an environmental-consequences course, and NS\&E 545, the Energy Seminar, are required. The courses are to be chosen from approved lists.

## Program for Applications of Nuclear Analytical Methods (PANAM)

This new program was initiated in 1993-94. It provides for specialization by Ph.D. candidates with either a major or a minor in NS\&E. For those with majors in non-nuclear fields who expect to use nuclear analytical methods in their research, the sequence NS\&E 509-$551-590$ forms a suitable minor in NS\&E. The laboratory course 551 has been offered since spring 1989. The lecture course 509, offered for the first time in 1993, covers nuclear physics without requiring quantum mechanics as a prerequisite. For NS\&E majors, PANAM offers the opportunity to extend and develop new nuclear-analytical methods, for example, uses of cold neutrons and neutron-depth profiling with conversion electrons. They would normally follow the M.Eng. program in the first year, continue with advanced courses in the second year (including a full quantummechanical treatment of nuclear physics), and begin, as early as possible, independent projects as precursors to thesis research.

## OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

J. A. Muckstadt, director; S. I. Resnick, L. I. Weiss, associate directors; L. J. Billera, R. G. Bland, D. C. Heath, P. L. Jackson, W. L. Maxwell, J. Renegar, R. Roundy, D. Ruppert, G. Samorodnitsky, L. W. Schruben, D. B. Shmoys, E. Slate, E. Tardos, M. J. Todd, L. E. Trotter, Jr., B. W. Turnbull

## Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional
areas with which operations researchers and industrial engineers are concerned. Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.
A student who plans to enter the Field
Program in Operations Research and
Engineering should take Basic Engineering Probability and Statistics (ENGRD 270). For a student who has not taken ENGRD 270, entry into the field program in OR\&E is possible only by permission of the associate director for undergraduate studies. In addition, it is recommended that Computers and Programming (COM S 211 or Engr 211) be taken before entry into the OR\&E field program. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR\&E field program and the typical terms in which they are taken are as follows:
Term 5
Credits
OR\&IE 320, Optimization I
OR\&IE 350, Cost Accounting, Analysis, and Control

OR\&IE 360, Engineering Probability and Statistics II
A course in humanities and social sciences
A non-OR engineering course
Term 6
OR\&IE 321, Optimization II
OR\&IE 361, Introductory Engineering Stochastic Processes
OR\&IE 410, Industrial Systems Analysis
Behavioral science $\dagger$
Course in humanities and social sciences
$\dagger$ The behavioral science requirement can be satisfied by any one of several courses, including Graduate School of Management (GSM) NCC 504 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and Industrial and Labor Relations 170, 171, 320, and 461. The adviser must approve the selection in all cases.
The basic senior-year program, from which individualized programs are developed, consists of the following courses:

## Minimum credits

OR\&IE 580, Digital Systems Simulation 4
Three upperclass OR\&E electives as described below

## Two non- OR electives

Two courses in humanities and social sciences
Two approved electives
Available OR\&E electives are as follows:
Manufacturing and distribution systems: OR\&IE 416, 417, 451, 516, 525, and 562 and GSM NBA 601 and 641*
Optimization methods: OR\&IE 431, 432, and 435
Applied probability and statistics: OR\&IE 462, 475 ( 2 credits), 476 ( 2 credits), 561, 563, 575, and 577
*No more than one course in the Graduate School of Management may be taken as an OR\&E elective.
Scholastic requirements for the field are a passing grade in every course, an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR\&E field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

## Master of Engineering (OR\&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.
General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng.(OR\&IE) program is integrated with the undergraduate Field Program in Operations Research and Engineering. Also welcome are requests for admission from Cornell undergraduates in engineering programs other than OR\&E or from qualified non-Comellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in statistics and in computer programming (Pascal or C). Students interested in the manufacturing engineering option should obtain further information regarding program requirements from the office of the Center for Manufacturing Enterprise, 103 Engineering and Theory Center Building. Information concerning industrial internships can be obtained from the Master of Engineering Program Office, 148 Olin Hall.
I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Engineering:

Fall term

Credits

OR\&IE 516, Case Studies 1
OR\&IE 893, Applied OR\&IE Colloquium
OR\&IE 599, Project
1
Three technical electives
Spring term
OR\&IE 894, Applied OR\&IE Colloquium 1
OR\&IE 599, Project minimum of 4 Three technical electives 9
The electives specified above will normally be chosen from graduate courses offered by the School of Operations Research and Industrial Engineering. A minimum of 30 credits must be taken to complete the program.
II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who bave the equivalent of OR\&IE 520, 523, and 570 will take technical electives in their place):

Fall term
Credits
OR\&IE 570, Introduction to Statistical
Theory with Engineering Applications
OR\&IE 520, Operations Research I
OR\&IE 516, Case Studies
OR\&IE 580, Digital Systems Simulation
OR\&IE 893, Applied OR\&IE Colloquium
OR\&IE 599, Project
Spring term
OR\&IE 523, Introduction to Stochastic Modeling

OR\&IE 894, Applied OR\&IE Colloquium 1
OR\&IE 599, Project minimum of 4
Two technical electives
Students fulfill the project requirement by working as part of a group of no more than four students on an operational systems problem that actually exists in some organization. Appropriate problems are suggested by manufacturing firms, retailing organizations, service organizations, government agencies, and educational institutions.

## Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng./M.B.A. program can be completed in six years.
An advantage for OR\&E majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concemed with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the M.Eng.(OR\&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.
The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.
In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR\&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Engineering and Theory Center Building, and at the admissions office of the Johnson Graduate School of Management.

## STATISTICS CENTER

The Cornell Statistics Center coordinates university-wide activities in statistics and probability. Students interested in graduate
study in statistics and probability should apply to the Field of Statistics or to one of the other graduate fields that offer related coursework.

A list of courses in statistics and probability suitable for graduate students in the Field of Statistics is given under the heading "Statistics Center" in the section "Interdisciplinary Centers and Programs" at the front of this book. Further information can be obtained from the director of the Statistics Center, Professor S. R. Searle, or from the field representative for statistics, Professor M. Wells, both at 482 Caldwell Hall.

## THEORETICAL AND APPLIED MECHANICS

J. T. Jenkins, chair; J. A. Burns, H. D. Conway, J. M. Guckenheimer, E. W. Hart, T. J. Healey,
C. Y. Hui, R. H. Lance, S. Mukherjee,
Y. H. Pao, S. L. Phoenix, R. H. Rand,
P. Rosakis, A. L. Ruina, W. H. Sachse,
A. Zehnder

## Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

## College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

## Master of Engineering (Engineering Mechanics) Degree Program

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

Students usually select courses totaling 20 credits, which may be chosen from four different departments. These courses explore the nature of modern composite materials, provide a background in the fundamentals of these materials and their mechanics, and introduce techniques that will be useful in subsequent work. The program offers a series of topical, four-week mini courses on specialized subjects related to composites, taught by experts in the field. The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T\&AM 501, 502 (Topics in Composites I; II), 555
(Introduction to Composite Materials), or 655 (Advanced Composite Materials and Struclures). Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Com-puter-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources. Core courses in the M.Eng.(Engineering Mechanics) program are:

Course
Credits
T\&AM 555, Introduction to Composite Materials

3
T\&AM 655, Advanced Composite Materials and Structures
T\&AM 663, Solid Mechanics I
T\&AM 501, Topics in Composites I 1-3
Selected from the following:
Analysis of Composite Structures
Mechanical Testing of Composite Constituents Fracture Testing of Composites
Reliability Models for Composites
Design Principles for Composite Structures
Biological Composites
T\&AM 502, Topics in Composites II $1-3$ Selected from the following:

Effective Properties of Composites
Interface Failure and Fracture Processes in Composites
Boundary-Element Methods for Composites
Nondestructive Testing of Composites
Software for Composite Design
Novel Composite Structures
T\&AM 591, Master of Engineering Design
Project I 3-5

T\&AM 592, Master of Engineering Design Project II
Complementary courses from other departments include:

MS\&E 450, Physical Metallurgy
MS\&E 452, Properties of Solid Polymers
MS\&E 605, Plastic Flow and Fracture of Materials

3
M\&AE 465, Biomechanical Systems-Analysis and Design

3
M\&AE 569, Mechanical and Aerospace Structures

M\&AE 670, Mechanical and Aerospace Structures II- Finite-Element Methods
CEE 770, Engineering Fracture Methods
4

CEE 772, Finite-Element Analysis
3
3

## ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.
Introduction to Engineering ENGRI
Engineering Distribution
ENGRD
Engineering General Interest ENGRG
Engineering Communications ENGRC
Agricultural and Biological Engineering ABEN
Applied and Engineering Physics A\&EP
Chemical Engineering CHEME
Civil and Environmental Engineering CEE
Computer Science COM S
Electrical Engineering ELE E

Geological Sciences GEOL

Materials Science and Engineering MS\&E
Mechanical and Aerospace Engineering M\&AE
Nuclear Science and Engineering
NS\&E
Operations Research and Industrial
Engineering
OR\&IE
Theoretical and Applied Mechanics
T\&AM

## ENGINEERING COMMON COURSES

## Courses of General Interest

Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

## ENGRG 101 The Computer Age lalso COM 8 101)

Fall, summer. 3 credits. Not offered every year. Credit is granted for both COM S 100 and 101 only if 101 is taken first.
An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence. Students become acquainted with the notion of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in Engr 100.

## ENORG 102 Drawing and Engineering

## Design (also MaAE 102)

Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.

2 lecs, 1 lab.
Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Use of computeraided drafting software is introduced in the final design project.

ENGRG 150 Engineering Seminar
Fall, spring. 1 credit. First-year students only. S-U grades only.
Weekly discussion of academic and nonacademic topics of interest to selected engineering faculty advisers and their students. Topics may include engineering applications of mathematics and science, recent science and engineering developments, such as
supercomputing and superconductors, or career opportunities in engineering and related fields. Some opportunity for visits to academic and research facilities on campus.

## ENGRG 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 272, CLASS 285, ENGL 285, MSAE 285, NS\&E 285, and PHYS 200)

Spring, 3 credits.
3 lecs.
An interdepartmental course on the application of techniques of physical sciences and engineering to issues in cultural research. In each portion of the course, several archaeological artifacts or works of art will be discussed with a focus on the historical and technical aspects of their creation and on their analysis by modern methods including microscopic, infra-red, and x-ray examination and by techniques using neutrons. Determination of chemical composition and/or spatial patterns and images are used to identify pigments, inks, clays, etc., to deduce geographical origins; to date and authenticate the objects; and to assess their state for purposes of conservation.

## ENGRG 250 Technology in Western Society (also ELE E 250)

Fall. 3 credits. Meets humanities distribution requirement.
R. Kline.

An investigation of the history of technology in Western society from ancient Egyptian times to the present, focusing on Western Europe up to the British industrial revolution in the late eighteenth century, and on the United States thereafter. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's promotion and regulation of technology through such measures as the patent system, the funding of research and development, and regulatory legislation; the origins of modern systems of mass production; and the spread of the automobile and microelectronics cultures in the United States

## ENGRG 290 Engineering in Europe

Spring. 2 credits. Open only to participants in the Semester in Europe Program. S-U grades only.
A specially designed field-trip course consisting of weekly two-hour seminars associated with approximately ten weekly field trips to engineering sites in and around Hamburg, Germany. Students will be required to maintain written journals of field trips and associated readings, as well as present oral reports on selected industries prior to class visits.

## [ENGRG 292 The Electrical and

 Electronic Revolutions (also ELE E 292)Spring. 3 credits. Approved for humanities distribution, not for ELE E or as a technical elective. Not offered 1994-95.
R. Kline.

Explores the history of electricity in society from the 1830 s to the present by considering
the technical and social history of telecommunications, the electric-power industry, microelectronics, radio, television, and computers. Emphasis is placed on the changing relationship between science and technology, the institutional context of research and development, the economic aspects of innovation, and the social relations of this technology.]

## ENQRQ 323 Engineering Economics and

 Management (also CEE 323) Spring. 3 credits. Primarily for juniors and seniors.D. P. Loucks.

Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

## ENGRG 356 Women in Engineering

 Career Planning SeminarSpring. 1 credit. Limited to 25 students. S-U grades only. Open to juniors and seniors in engineering and related fields.

1 sem. M. Fish.
Covers aspects of transition to the engineering profession and related issues especially of interest to women. Topics include career and life planning, the job-search process, interviewing strategies, juggling career and family, graduate education, sexual harassment and sexism in the workplace, professionalism, and networking. Corporate professionals and Comell faculty and staff participate in class discussions.

## [ENGRG 360 Ethical Issues in Engineering

Spring. 3 credits. A social-science elective for engineering students. Open to juniors and seniors. Not offered 1994-95.

3 lecs.
A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for harmful actions, whistleblowing, conflicts of interest, and decision making based on costbenefit analysis. Codes of ethics of professional engineering societies and ethical theory will be used to help sort out conflicting obligations the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class, along the lines of the Space-Shuttle Challenger disaster, the Kansas City Hyatt-Regency Hotel walkway failure, or the Comell computer "worm."]

## ENGRG 461 Engineering for Entrepreneurs

## Fall. 3 credits.

R. Warkentin.

Intent is to provide students with the tools and skills necessary to identify, evaluate, and undertake new business ventures. A major course project will be the development of a business plan for an innovative new venture and will require the detailing of manufacturing, support, and information systems as well as staffing and cost data. Intended for juniors and seniors in the College of Engineering, this course is open to all undergraduates.

## ENGRG 501 Bioengineering Seminar

 Fall, spring. 1 credit. Primarily for juniors, seniors, and graduate students.M. L. Shuler and staff.

Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions.

## ENGRG 600 Teaching Engineers

Fall, spring. 1-3 credits.
Staff
For graduate students and advanced undergraduates who may be teaching assistants or who are interested in careers in universities. Lectures will cover a variety of topics aimed at helping students become effective teachers. Particular attention will be given to how to develop students' problem-solving skills, make learning challenging and exciting, teach in a culturally diverse environment, and teach in an electronic classroom or laboratory.

## Engineering Communications Courses

Courses in this category, offered by the
Engineering Communications Program, develop writing and communications skills relevant to engineers.

## ENGRC 233/433 Topics in Engineering Communications

TBA. 3 credits.
Topics vary as the need and interest arise. Offerings might include: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law. Fulfills the college technical writing requirement

## ENGRC 234/434 Independent Study in Engineering Communications

 TBA. Variable credits (1-3). Credit and course level (234 or 434 ) determined by the amount and intellectual level of the work. Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.
## ENQRC 301 Writing in Engineering

TBA. 1 credit. Prerequisite: Permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. This course can only be taken in conjunction with a "uriting-intensive" engineering class.
Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

## ENGRC 350 Engineering

## Communications

Fall, spring, summer. 3 credits. Limited to 20 students per section.
P. Beebe, S. Hubbard, S. Youra.

Emphasizes technical and professional writing; also includes oral and graphic presentation. Communications in real-life engineering contexts are analyzed, with case studies and assignments modeled on professional situations. Students learn to adapt language and formats-letters, memoranda, instructions, definitions, proposals, reports-to audiences having different needs and levels of technical expertise. Students also consider the social and ethical implications of the communications they encounter and produce. Taught as a workshop, with ample time for discussion. The goal throughout is clear, well-organized, responsible, and forceful professional communication. Lab fee: $\$ 10$ to cover photocopying costs. Fulfills the college technical writing requirement.

## ENGRC 435 Writing for Engineering Managers

3 credits. Limited to 20 students per section. For juniors and seniors.
S. Hubbard.

Guidance and practice in professional writing and in developing effective responses to case studies that replicate actual problems in industry. Learn techniques for planning and organizing action; controlling and monitoring progress; motivating, leading, coaching, and appraising co-workers; handling organizational power and politics, and managing conflict. Focus on issues such as writing successful proposals, managing engineering teams and projects, and communicating with lawyers, regulators, and the general public. Fulfills the college technical writing requirement. Ten-dollar lab fee to cover photocopying costs.

## Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

## ENGRI 110 The Laser and its

 Applications in Science, Technology, and Medicine (also A\&EP 110)
## Fall, spring. 3 credits.

2 lecs, 1 lab.
The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, Raman spectroscopy, optical filtering, and interferometry.

## ENGRI 111 Elements of Materials Science and Engineering (also MS\&E 111)

Fall. 3 credits.
Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products like a disposable camera, portable cassette player, or CD player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGRI 112 Introduction to Chemical Engineering (also CHEME 112)
Fall, spring, 3 credits. Limited to freshmen.
2 lecs, 1 rec. T. M. Duncan, P. Clancy. Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

## ENGRI 113 Environmental Systems

 Engineering (also CEE 113)Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students, who should take CEE 120 instead.

2 lecs, 1 sec. W. Lynn.
Analysis and management of environmental systems. Introduction to physical, chemical, and biological processes affecting environmental quality. Environmental modeling and the use of interactive computer graphics. Specific topics include management of water resources, flood control, waste management, ecosystems, and water quality in surface and ground waters.
[ENGRI 114 An Introduction to Engineering Design
Spring. 3 credits. Not offered 1994-95. 2 lecs, 1 lab. R. Compton.
Students work on a series of linked projects in the areas of computer-aided-design,
electromechanics, multimedia, robotics, electronics, and mechanical design. Laboratory fee required.]

## ENGRI 115 Engineering Application of Operations Research (also OR\&IE 115)

Fall, spring. 3 credits.
2 lecs, 1 lab.
An introduction to the problems and methods of Operations Research and Industrial
Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

## ENGRI 116 Modern Structures (also CEE

 116)Fall, spring. 3 credits.
2 lecs, 1 sec. Fall, M. Sansalone; spring,
G. Deierlein.

An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures are discussed. The Computer-Aided Design Instructional Facility (CADIF) and the Craig Miller Laboratory for Structural Modeling in Hollister Hall are used to demonstrate how engineering materials and structures behave under load. A semester project involves the design and construction of a small balsa-wood bridge.

## ENGRI 117 Introduction to Mechanical Engineering (also M\&AE 117)

Fall. 3 credits
An introduction to topics of current interest in mechanical engineering. Specific topics vary from offering to offering. Students are urged to check in Upson 112 for details. In 1993, the course was "The Engine and the Atmosphere." This course discussed engines and their design including constraints imposed by the laws of thermodynamics, the combustion process, and the products of the exhaust. This led to a discussion of local and global environmental problems, including greenhouse warming. The dilemma of productivity versus environmental degradation and the engineer's role in this was also discussed. This offering was intended for students wishing to study mechanical engineering as well as environmental, chemical, and civil engineering
ENGRI 118 Design Integration: A Portable CD Player (also MSEE 118)
Spring. 3 credits.
3 lecs. M. Thompson.
This course will examine the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students will be introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations will be used to illustrate the principles of design.

## ENGRI 121 Fission, Fusion, and

 Radiation (also NS\&E 121)Spring. 3 credits
2 lecs, 1 lab demonstration. A lecture, demonstration, and laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) the benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) the uses of nuclear radiation in physical and biological research. The laboratory work and demonstrations involve criticality and the control of Cornell's two research reactors; detection of, and protection against, nuclear radiation; neutron activation analysis using gamma-ray spectroscopy; and plasma sources and devices.

## ENQRI 122 Earthquake! (also GEOL 122)

 Fall. 3 credits.2 lecs, 1 lab. L. D. Brown.
The science of natural hazards and strategic resources is explored in a series of geophysical exercises involving: Earthquakes-an obscure scientists predicts a major earthquake for Los Angeles. Join a disaster task force as it attempts to evaluate the predicton and its social consequences. Oil-participate in a simulated cruise to probe with sound waves for oil deep beneath the Gulf of Mexico. Water-a toxic spill occurs near a housing complex in Ithaca, New York. Use seismic instruments to map the shallow subsurface and identify potential routes of contamination.

## ENORI 123 Sensors and Actuators

Fall. 3 credits.
2 lecs, 1 lab.
A sensor or an actuator is the element by which information is converted from one form of energy to another. It is the key component in all measurement and control systems. This course will focus on the operational features of a wide variety of sensors and actuators that are used in scientific and engineering metrology, in industrial process control
applications, and in consumer products. The devices may be based on electrical, mechanical, acoustical, optical, and thermal phenomena. Students will measure the parameters of various thermo-mechanical sensors and actuators and they will be expected to design, fabricate, and verify the operation of a sensor meeting specific design objectives.

## ENGRI 172 Introduction to Artificial

Intelligence (also COM $\$ \mathbf{1 7 2}$ )
Spring. 3 credits. Recommended: COM S 100 or 101 , or equivalent computer experience. Enrollment may be limited. Not offered every year.

3 lecs, 2 evening exams.
A hands-on introduction to concepts in artificial intelligence. Topics may include heuristic search, game playing, automated theorem proving, natural-language processing, expert systems, neural networks and/or machine learning. Students will use workstation environments to gain software laboratory experience. Interested students need not be proficient programmers to take this class.

ENGRI 181 Engineering in Context lalso Science and Technology Studies 181)

Fall. 3 credits. No prerequisites. Illustrated lecs; multimedia lab.
Fundamental engineering principles designed to introduce engineering and other majors to the traditions and practices of the engineering profession and their effects on our culture (Engineering literacy for non-engineers.) Development of scientific and engineeringdesign principles in a variety of technological contexts. Overview of the development of engineering as a profession and the evolution of the design process. The relationship between science, technology, and engineering. Civil, mechanical, electrical, chemical, and other engineering project case studies. The implications and uses of information technologies in society.

## Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

## ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)

Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112.

2 lecs; 1 rec, lab, or field trip.
L. M. Cathles.

Formation of the solar system: accretion and evolution of the earth. The rock cycle radioactive isotypes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport Weathering cycle: chemical cycles, $\mathrm{CO}_{2}$ (weathering), rock cycle, controls on global temperature ( $\mathrm{CO}_{2}$ or ocean currents), oil and mineral resources.

## ENGRD 202 Mechanics of Solids (also

 T\&AM 202)Fall, spring. 3 credits.
2 lecs, 1 rec, 4 labs each semester, evening exams.
Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical proper-
ties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

ENGRD 203 Dynamics (also T\&AM 203)
Fall, spring. 3 credits. Prerequisite: T\&AM
202, coregistration in Mathematics 294, or permission of instructor.

2 lecs, 1 rec, 4 labs each semester, evening exams.
Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210 Introduction to Electrical Systoms (also ELE E 210)
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 294 and Physics 213.

3 lecs and optional tutorial secs. Circuit elements and laws, analysis techniques, operational amplifiers. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, pole-zero concepts, and the frequency spectrum.
ENGRD 211 Computers and Programming (also COM S 211) Fall, spring, summer. 3 credits. Credit will not be granted for both COM S 211 and 212 . Prerequisite: COM S 100 or equivalent programming experience.

2 lecs, 1 rec, 2 evening exams Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, object-oriented programming data structures, and analysis of algorithms. Pascal is the principal programming language.

## ENGRD 212 Modes of Algorithmic <br> Expression (also COM $\mathbf{5}$ 212)

Fall, spring. 4 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience.

2 lecs, 2 recs, 2 evening exams. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme, a dialect of LISP
ENGRD 219 Mass and Energy Balances (also CHEME 219)
Fall. 3 credits. Co-requisite: physical or organic chemistry or permission of instructor. C. Cohen.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems. Humidification processes.

## ENGRD 221 Thermodynamics (also

 M\&AE 221)Fall, spring. 3 credits. Prerequisites:
Mathematics 192 and Physics 112.
3 lecs.
The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, multiphase pure substances, gaseous reactions. Heat-engine and heatpump cycles, with an introduction to energyconversion systems.

## ENGRD 222 Introduction to Scientific Computation (also COM $\mathbf{S}$ 222)

Spring. 3 credits. Prerequisites: COM S 100 and prerequisite or corequisite of Mathematics 221 or 293.

2 lecs, 1 rec, 2 evening exams.
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation and high-performance FORTRAN.

## ENGRD 230 Introduction to Digital Systems (also ELE E 230)

Fall, spring. 4 credits. Prerequisite: COM S 100.

2 lecs, 1 lab.
An introduction to basic principles and design techniques for digital systems such as computers and communications systems. Includes Boolean algebra, switching circuits, finite state machines, and system design methodology.

## ENGRD 241 Engineering Computation

 (also CEE 241)Spring. 3 credits. Prerequisites: COM S 100 and Mathematics 293. Co-requisite: Mathematics 294.

2 lecs, 1 rec, 2 evening exams. P.L.-F Liu, J. F. Abel.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems, which entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.
ENGRD 261 Introduction to Mechanical Properties of Materials (also MS\&E 261)

Fall, spring. 3 credits.
2 lecs, 1 rec or lab.
The relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

## ENGRD 262 Introduction to Electrical Properties of Materials (also MS\&E 262)

Spring. 3 credits. Prerequisite: co-registration in PHYS 213 or electricity and magnetism in high school physics.

2 lecs, 1 rec or lab.
Electrical and structural properties of semiconductors, the operation of $p-n$ junctions and transistors, and the processing methods used to form modern integrated circuits.
Electrical conduction in metal films, semiconductors, bipolar and field-effect transistors and light-emitting diodes. Diffusion, ion implantation, oxidation, metallization, and other process steps in fabricating semiconductor devices. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.

## ENGRD 264 Computer-Instrumentation

 Design (also A\&EP 264)Fall, spring. 3 credits. Prerequisites: Engr 100 or COM S 100.

1 lec, 1 lab.
This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments will be performed using an IBM-AT style computer ( 25 MHz 80386 , color graphics) running MSDOS. The experiments and devices to be investigated include: input and output ports, analog-to-digital converters (ADC), digital-toanalog converters (DAC), thermistors, optical sensors, temperature control, least-squares curve fitting of experimental data, stepping motors, thermal diffusion, and viscosity of fluids. Computer control, data acquisition, and data analysis (graphical and numerical) will be investigated in these experiments using Pascal and machine language programming as well as commercial graphics program packages. At the level of IBM-PC in the Laboratory, by B. G. Thompson and A. F. Kuckes.

## ENORD 270 Basic Engineering

 Probability and Statistics (also OR\&IE 270)Fall, spring. 3 credits. Prerequisite: first-year calculus.

3 lecs, evening prelims.
This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

## AGRICULTURAL AND BIOLOGICAL ENGINEERING

Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences.

## APPLIED AND ENGINEERING PHYSICS

## A\&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGRI 110)

Fall, spring. 3 credits. This is a course in the Introduction to Engineering series.

2 lecs, 1 lab.
For description see Engineering Common Courses.

## A\&EP 264 Computer-Instrumentation Design (also ENGRI 264)

Fall, spring. 3 credits. Prerequisites: Engr 100 or COM S 100.

1 lec, 1 lab.
For description see Engineering Common Courses

## A\&EP 303 Introduction to Nuclear Science and Engineering I (also NS\&E 303)

Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294

3 lecs.
For description see NS\&E 303.

## A8EP 320 Engineering Blophysics: The Physics of Life

Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math. 2 lecs, 1 lab.
Most phenomena in engineering have analogies in biological systems. Examples include information storage by DNA, signal transduction in nerve cells, neural networks in the brain, and systems integration in ecosystems among others. This course examines the physics of these phenomena. Emphasis is on modern instrumentation as it pertains to biophysical measurements. This course is considered a foundations course for those interested in biophysics and bioengineering.
A8EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: Math 294. Intended for upper-level undergraduates in the physical sciences.

4 lecs.
Review of vector analysis; complex variable theory, Cauchy-Rieman conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Pbysicists, by Arfken; Mathematical Physics, by Butkov.
A\&EP 322 Mathematical Physics II Spring. 4 credits. Prerequisite: A\&EP 321 Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences. 4 lecs.
Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernals; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Metbods for Physicists, by Arfken; Mathematical Physics, by Butkov.

## AzEP 333 Mechanics of Particles and

 Solid BodiesFall, summer. 4 credits. Prerequisites: Physics 112 or 116 and coregistration in A\&EP 321 or equivalent or permission of instructor. 3 lecs, 1 rec
Newton's mechanics; linear oscillations; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion)

## A\&EP 355 Intermediate

 ElectromagnetismFall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A\&EP 321 or equivalent, or permission of instructor. 3 lecs, 1 rec.
Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic materials, energy in fields, quasistatics and magnetic circuit design. Emphasis is on developing proficiency with analyical and numerical solution techniques in order to solve real-world design problems

A8EP 356 Intermediate Electrodynamics Spring. 4 credits. Prerequisite: A\&EP 355 and coregistration in A\&EP 322 or equivalent, or permission of instructor.

3 lecs, 1 rec.
Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays

## A\&EP 361 Introductory Quantum

 MechanicsSpring. 4 credits. Prerequisites: A\&EP 333 or Physics 318; coregistration in A\&EP 322 or equivalent and in A\&EP 356 or Physics 326. 3 lecs, 1 rec
A first course in the systematic theory of quantum phenomena. Topics include the harmonic oscillator, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory

## A\&EP 363 Electronic Circuits (also Physics 360)

Fall, spring, summer. 4 credits. Prerequisite: Physics 208 or 213 or permission of instructor; no previous experience with electronics is assumed. EP students without AP credit are encouraged to take this in the spring of their sophomore year.

1 lec, 2 labs
Analyze, design, build, and test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors operational amplifiers (linear amplifiers, oscillators, comparators and Schmitt triggers), filters, diodes and transistors. Digital circuits: combinatorial and sequential logic (gates, flipflops, counters, shift registers, timers, one shots). Computer interfacing introduced and used to investigate digital-to-analog (DAC) and analog-to-digital conversion (ADC) techniques. DOS, Pascal, and machine language used. At the level of The Art of Electronics, by Horowitz and Hill

A\&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: Introductory three-semester physics sequence plus one year of junior-level mathematics

3 lecs, 1 rec.
Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and BoseEinstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Pbysics, by Kittel and Kroemer, and Statistical Pbysics, by Rosser

## A\&EP 434 Continuum Physics

Spring. 4 credits. Prerequisites: A\&EP 333 and 356 or equivalent

3 lecs, 1 rec.
Local conservation laws; stress, strain, and rate-of-strain tensors; equations of motion for elastic and viscous response; waves in solids and fluids; dislocations; ideal fluids, potential flow, Bernouli's equation, vorticity and circulation, lift; viscous incompressible flow and the Navier-Stokes equations, Reynolds number, Poiseuille flow in a pipe, Stokes drag on a sphere; boundary layers, Blasius equations; flow instabilities, Rayleigh-Benard convection and the onset of chaotic flow Introduction to turbulent flow.

## [A\&EP 436 Physical and Integrated

 Optics4 credits. Prerequisites: A\&EP 355, A\&EP 361, or equivalent or co-registration in A\&EP 361. Not offered 1994-95.

3 lecs, 1 lab.
The fundamentals of optics: diffraction, polarization, interference, birefringence, scattering, Fourier optics. Applications to optical waveguides, nonlinear optics, integrated optics, optical storage, coherent detection, optical communications. Emphasis on hands-on experimental laboratory demonstrations and computer synthesis of optical phenomena.]

## A8EP 438 Computational Engineering

 PhysicsSpring. 3 credits. Prerequisites: COMS 100, A\&EP 321, 333, 355, 361, or equivalent, or permission of instructor; co-registration in 361 permitted.

2 lecs, plus computer lab.
Numerical computation (derivatives, integrals, differential equations, matrices, boundaryvalue problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot by solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally $\mathrm{C}++$, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with $C$ assumed.

## AsEP 440 Quantum and Nonlinear Optics

Spring. 4 credits. Prerequisites: A\&EP 356, A\&EP 361 or equivalent.

3 lecs.
An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and in guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, solitons, optical phase conjugation, optical resonance and two-level atoms, stimulated
absorption and emission, atom cooling and trapping, multiphoton processes, spontaneous and simulated scattering, mechanisms of ultrashort pulse generation, ultra intense lasermatter interactions.

AREP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M\&AE 559, and NS8E 484)
Spring. 3 credits. Not offered every year.
Prerequisites: Physics 112,213 , and 214 , or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students.

3 lecs.
For description see NS\&E 484.

## A\&EP 490 Independent Study in

 Engineering PhysicsCredit to be arranged.
Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details to be arranged with respective faculty member.
A\&EP 606 Introduction to Plasma Physics (also ELE E 581)
Fall. 4 credits. First-year graduate-level course; open also to exceptional seniors with permission of instructor. Prerequisites: A\&EP 355 or 356 , or EE 303 and 304, or equivalent. 3 lecs.
Plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementarytransport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves; hydromagnetic stability; elementary applications to space physics and controlled fusion.

## A\&EP 607 Advanced Plasma Physics

 (also ELE E 582)Spring. 4 credits. Prerequisite: A\&EP 606 ELE E 581.

3 lecs.
Boltzmann and Vlasov equations; dielectric tensor; waves in hot magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.
[A\&EP 609 Low-Energy Nuclear Physics Fall. 4 credits. Prerequisite: an introductory course in modern physics, including quantum mechanics. Offered alternate years. Not offered 1994-95.

3 lecs.
The nuclear interaction. Properties of ground and excited states of nuclei; models of nuclear structure; alpha, beta, gamma radioactivity; low-energy nuclear reactions-resonant and nonresonant scattering, absorption, and fission. At the level of Introduction to Nuclear Pbysics, by Enge.]

## AREP 612 Nuclear Reactor Theory

Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics. 3 lecs.
Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion; slowing down and thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors.

## ENGINEERING - 1994-1995

Reactor kinetics. At the level of Nuclear Reactor Theory, by Lamarsh.

A\&EP 615 Molecular Biophysics of Cellular Dynamics
To be arranged. 3 credits. Prerequisite: Graduate or senior level in either physical or biological science, or engineering.

2 lecs.
Current problems in the molecular biophysics of cell function, the nervous system and immunology: supramolecular organization of cells through spontaneous self assembly and physical basis of mesoscopic cellular structure; dynamics of receptor function, molecular mobility and motility; statistical thermodynamics of single ion channel molecules and neurotransmitter receptors in neuroscience; methods of imaging and measuring molecular dynamics of cellular function.

## A\&EP 633 Nuclear Engineering

Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

## A\&EP 634 Nuclear Engineering Design

 SeminarSpring. 4 credits. Prerequisite: A\&EP 633. A group design study of a selected nuclear system. Emphasis is on safety, siting, and radiation protection in the design of nuclear systems.

A\&EP 638 Intense Pulsed Electron and Ion Beams: Physics and Technology Spring. 2 credits. Prerequisites: A\&EP 606 (ELE E 581) and 607 (ELE E 582) or equivalent, or permission of instructor. Offered when demand warrants.
Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibria and stability; (2) technology of intense beam production, such as pulsedpower generator principles, and electron and ion diode operation; and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

## A\&EP 651 Nuclear Measurements

 LaboratorySpring. 4 credits. Prerequisite: A\&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS\&E 551, is intended for students in nonnuclear fields in which nuclear methods are used.

One one-hour lecture and two two-and-a-half-hour labs. D. D. Clark. Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods. About fifteen experiments are available in radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; neutron radiography; neutron moderation and reactor physics; neutron diffraction; and lowenergy nuclear physics with neutron beams. The TRIGA reactor and the Zero Power Reactor critical facility are used. Students select seven or eight experiments to meet their interests and needs. At the level of Radiation Detection and Measurement, by Knoll.

A\&EP 661 Microcharacterization Fall. 3 credits. Prerequisites: introductory three-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level.
The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterizatation is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

## A\&EP 662 Micro/Nano-fabrication and Processing

Spring. 3-4 credits ( 3 credits plus 1 credit for optional laboratory)

Several field trips.
An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

## A\&EP 681-689 Special Topics in Applied Physics

Topics, instructors, and credits to be announced each term. Typical topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuators, biophysical processes, molecular fluorescence.

## A\&EP 711 Principles of Diffraction (also

 MS\&E 610)Spring. 4 credits. Offered alternate years. Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers and the effect of thermal vibrations. Diffraction from almost periodic structures, surface layers, gases, and amorphous materials. Survey of dynamical diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

## A8EP 751/752 Project

751 , fall and spring. $6-12$ credits to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

## AREP 753 Special Topics Seminar in Applied Physics

Fall. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics.
Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is
made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

## CHEMICAL ENGINEERING

## CHEME 101 Nonresident Lectures

Spring. 1 credit.
1 lec. F. Rodriguez and guest lecturers. Given by lecturers invited from industry and from selected departments of the university to assist students in their transition from college to industrial life.
CHENE 112 Introduction to Chemical Engineering lalso ENGRI 112)
Fall, spring. 3 credits. Limited to freshmen. 2 lecs, 1 rec. T. M. Duncan, P. Clancy. For description see Engineering Common Courses.

## CHEME 219 Mass and Energy Balances

 (also ENGRD 219)Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor.

3 lecs. 1 computing session. C. Cohen.
For description see Engineering Common Courses.

## CHEME 313 Chemical Engineering

 ThermodynamicaFall. 4 credits. Corequisite: physical chemistry.

4 lecs, 1 computing session. P. Clancy, K. E. Gubbins. A study of the first and second laws, with application to batch and flow processes. Thermodynamic properties of fluids; applications of thermodynamics to compressors, power cycles, refrigeration; thermodynamic analysis of processes. Thermodynamics of mixtures, phase equilibria and phase diagrams. Estimation methods. Heat effects, chemical equilibria.

## CHEME 323 Fluid Mechanics

Fall. 3 credits. Prerequisites: CHEME 219 and engineering mathematics sequence.

3 lecs, 1 computing session.
W. L. Olbricht.

Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.
CHEME 324 Heat and Mass Transfor Spring. 3 credits. Prerequisite: CHEME 323. 3 lecs, 1 computing session. P. H. Steen, W. B. Streett.

Fundamentals of heat and mass transfer. Macroscopic and microscopic balances. Applications to problems involving conduction, convection, and diffusion.

## CHEME 332 Analyais of Separation Processes

Spring. 4 credits. Prerequisites: CHEME 313 and 323.

3 lecs, 1 computing session. P. Harriott,
K. E. Gubbins.

Analysis of separation processes involving phase equilibria and mass transfer; some use of the digital computer. Phase equilibria; binary and multicomponent distillation; liquidliquid extraction; gas absorption, absorption, membrane separations.

CHEME 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEME 313 and 323.

3 lecs, 1 computing session.
T. M. Duncan.

A study of chemical reaction kinetics and principles of reactor design for chemical processes

## CHEME 432 Chemical Engineering

 LaboratoryFall. 4 credits. Prerequisites: CHEME 323, 324, 332, and 390.

3 lecs, 1 lab. F. Rodriguez and staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.
CHEME 462 Chemical Process Design Spring. 4 credits. Prerequisite: CHEME 432. Staff.
A consideration of process and economic alternatives in selected chemical processes; design and assessment.

## CHEME 472 Process Control

Spring. 3 credits. Prerequisites: CHEME 324 and 390.

3 lecs, 1 lab. J. R. Engstrom.
Analysis of the dynamics of chemical processes and design of feedback and feedforward control systems. Laplace tranform techniques; stability analysis; frequency-response analysis. An introduction to multivariable control. The laboratory includes experiments on transient response, frequency response, controller tuning, and discussions of typical process instrumentation.

## CHEME 481 Biomedical Engineering

Fall. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor.

3 lecs. D. A. Hammer.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

## CHEME 490 Undergraduate Projects in

 Chemical EngineeringFall, spring. Variable credit.
Research or studies on special problems in chemical engineering.
CHEME 520 Chemical, Pharmaceutical, and Food Processing
Spring. Variable to 3 credits. Prerequisite: seniors or M.Eng. students with one term of college chemistry.
C. Cohen, R. Finn, and S. Mulvaney. This course consists of three equal parts, each worth one credit. The chemical part is open to non-chemical engineers only and covers process fundamentals, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEME 564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEME 390 or equivalent.

3 lecs. P. Harriott.

Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

## CHEME 565 Design Project

Fall, spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program. Staff.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

## [CHEME 566 Systematic Methods for

 Process DesignSpring. 3 credits. Prerequisite: CHEME 332 or equivalent. Not offered 1994-95. 3 lecs.
An introduction to the synthesis and use of computer systems for steady-state simulation of chemical processes. Systematic design methods for vapor-liquid processes, including synthesis methods for separation systems and heat exchanger networks.]

## CHEME 590 Special Projects in Chemical Engineering

Fall, spring. Variable credit. Limited to graduate students.
Non-thesis research or studies on special problems in chemical engineering.

## CHEME 640 Polymeric Materials

Fall. 3 credits.
3 lecs. F. Rodriguez.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

## CHEME 642 Polymeric Materials Laboratory

Spring. 2 or 3 credits. Prerequisite: CHEME 640.

> F. Rodriguez.

Experiments in the formation, characterization, fabrication, and testing of polymers.

## CHEME 643 Introduction to Bioprocess

 EngineeringFall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in the biological sciences required.

3 lecs. M. L. Shuler.
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

## [CHEME 645 Advanced Concepts in Biological Engineering

Spring. 3 credits. Prerequisite: CHEME 643 or equivalent or permission of instructor. Not offered 1994-95.

3 lecs. D. A. Hammer.
Fundamentals of biochemical and biomedical engineering, with additional emphasis on cell and membrane biophysics. Topics include cell-surface receptor phenomena, protein diffusion, cell adhesion, membrane biophysics, cell motility and growth, mathematical immunology, virus binding and infection, enzyme catalysis, bioseparation, and genetically modified organisms.]

## [CHEME 648 Polymers in Electronics and Related Areas

Spring. 3 credits. Prerequisite: 640 or permission of instructor. Not offered 1994-95.

3 lecs. F. Rodriguez
Applications of polymers as resists for microlithography, as insulators, and as conductors. Radiation effects, polymer synthesis, and surface characterization. Additional special topics may be covered.]

## [CHEME 650 Reaction and Transport in Gas-Solid Systems

Spring. 3 credits. Prerequisite: CHEME 390 or permission of instructor. Not offered 1994 95.

3 lecs. J. R. Engstrom and A. B. Anton. Analysis of processes for materials synthesis and modification that involve gas-solid interactions, including chemical-vapor deposition, plasma etching, and heterogeneous catalysis. Focuses on the physiochemical processes that underlie these technologies, including mechanisms of vapor transport; energy and heat transfer; thermodynamic relationships between the vapor, adsorbed and solid phases; and both homogeneous and heterogeneous reaction kinetics.]

## [CHEME 656 Separations Using

Membranes or Porous Solids
Spring. 3 credits. Prerequisites: ChemE 324 and 332. Not offered 1994-95.

3 lecs. P. Harriott.
Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.]

## CHEME 661 Air Pollution Control

Fall. 3 credits.
3 lecs. P. Harriott.
Origin of air pollutants, U.S. emission standards, dispersion equations. Design of equipment for removal of particulate and gaseous pollutants formed in combustion and chemical processing.

## [CHEME 673 Adsorption and Reactions on Chemically Reactive Solids

Fall. 3 credits. Not offered 1994-95.
3 lecs. R. P. Merrill.
The physics and chemistry of reactions at solid surfaces are presented in molecular detail. The emphasis is on the use of modern spectroscopic techniques to determine the geometric structure, electronic properties, and reaction sequences on well-defined surfaces. Examples from the preparation of optoelectronic materials and from catalysis will be given to illustrate the concepts and principles presented.]

## CHEME 675 Synthetic Polymer Chemistry (also MS\&E 671 and Chemistry 671)

Fall. 4 credits. Prerequisites: Chem 359-360 or equivalent or permission of instructor. MS\&E 620 is recommended.

3 lecs. J. M. J. Frechet.
For description see Chemistry 671

## [CHEME 681 Dynamics of Colloidal

 SystemsFall. 3 credits. Prerequisite: basic understanding of thermodynamics and fluid dynamics. Offered alternate years. Not offered 1994-95. 3 lecs. A. Z. Panagiotopoulos and W. L. Olbricht.

Fundamental descriptions of colloidal systems under equilibrium and non-equilibrium conditions. Phase equilibria of surfactant systems, thermodynamics of micelle formation, forces between colloidal particles,
electrokinetic phenomena, flocculation and aggregation, transport of surfactant in interfacial systems, stability of emulsions, and dynamics of thin films. Open to advanced undergraduates and graduate students from all fields.]

## CHEME 711 Advanced Chemical

 Engineering Thermodynamics Fall. 3 credits. Prerequisite: CHEME 313 or equivalent.3 lecs. A. Panagiotopoulos Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

CHEME 713 Chemical Kinetics and Dynamics
Fali. 3 credits. Prerequisite: CHEME 390 or equivalent.

3 lecs. J. R. Engstrom
Microscopic and macroscopic viewpoints Connections between phenomenological chemical kinetics and molecular reaction dynamics. Reaction cross sections, potential energy surfaces, and dynamics of bimolecular collisions. Molecular beam scattering. Transition state theory. Unimolecular reaction dynamics. Complex chemically reacting systems: reactor stability, multiple steady states, oscillations, and bifurcation. Reactions in heterogeneous media. Free-radical mechanisms in combustion and pyrolysis

## CHEME 721 Thermodynamics and Phase

 Change Heat Transfer (also M\&AE 652)Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
C. T. Avedisian

For description see M\&AE 652.
CHEME 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEME 323 and 324 or equivalent.

3 lecs. D. L. Koch.
Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer

CHEME 732 Diffusion and Mass Transfor
Spring. 2 credits. Prerequisite: CHEME 731 or equivalent.

2 lecs. D. L. Koch
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems

## CHEME 734 Fluid Mechanics of

 SuspensionsSpring. 3 credits. Prerequisites: CHEME 731, M\&AE 601, or equivalent. Offered alternate years. Not offered 1994-95
Relationship between macroscopically observed transport and rheological behavior of suspensions and composites, and underly ing transport processes occurring on the particle-length scale. Methods of treating interparticle hydrodynamic interactions.

Derivation of macroscopic properties using ensemble averages, renormalization, and dynamic simulations. Applications will include free suspensions of solid spheres, fibers, and bubbles; composite solids; and porous media.]

## CHEME 741 Selected Topics in Biochemical Engineering

Fall. 1 credit (may be repeated for credit). Prerequisite: CHEME 643 or permission of instructor.
M. L. Shuler.

Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 745 Physical Polymer Science I
Fall. 3 credits. Prerequisite: CHEME 711 or equivalent. Offered alternate years C. Cohen.

Thermodynamic properties of dilute, semidilute, and concentrated solutions from both classical and scaling approaches. Characterization techniques of dilute solutions osmometry, light scattering, viscometry, and sedimentation. Rubber elasticity; mechanical and thermodynamic properties of gels. Polymer melts: equations of state and glass transition phenomena

## CHEME 751 Mathematical Methods of

 Chemical Engineering AnalysisFall. 4 credits
3 lecs. P. H. Steen.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbation, multiple scales, asymptotic analysis. Linear and nonlinear ordinary differential equations, partial differential equations.

## [CHEME 753 Analysis of Nonlinear

 Systems: Stability, Bifurcation, and ContinuationFall. 3 credits. Prerequisite: CHEME 751 or equivalent. Offered alternate years. Not offered 1994-95

3 lecs. P. H. Steen.
Elements of stability and bifurcation theory Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.]
CHEME 772 Theory of Molecular Liquids Spring. 3 credits. Prerequisite: CHEME 711 or equivalent. Offered alternate years
K. E. Gubbins.

Theory of intermolecular forces, and equilibrium statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.

## [CHEME 774 Atomistic Simulation of

 MaterialsSpring. 3 credits. Prerequisite: Competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful. Offered alternate years. Not offered 1994-95

2 lecs, 1 computer lab
A. Panagiotopoulos.

The statistical mechanical theory behind Monte-Carlo and Molecular-Dynamics computer-simulation techniques. Strong emphasis is placed on students writing their
own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle forces and application of atomistic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.]

## CHEME 790 Seminar

Fall, spring. 1 credit each term.
J. R. Engstrom.

General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering

## CHEME 792 Advanced Seminar in

 ThermodynamicsFall, spring. 1 credit.
P. Clancy, A. Panagiotopoulos

A forum for talks by graduate students and faculty members on topics of current interes in thermodynamics and statistical mechanics.

CHEME 793 Advanced Seminar in Applied Spectroscopy
Fall, spring. 1 credit.
T. M. Duncan.

A forum for talks by graduate students, faculty members, and visiting scientists on topics of current interest in applied spectroscopy.

## CHEME 890 Thesis Research

Fall, spring. Variable credit
Thesis research for the M.S. degree in
chemical engineering
CHEME 990 Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

## CIVIL AND ENVIRONMENTAL ENGINEERING

## General

CEE 113 Environmental Systems Engineering (also ENQRI 113
Fall. 3 credits
2 lecs, 1 sec. W. Lynn.
For description see Engineering Common Courses

CEE 116 Modern Structures (also ENGRI 116)

Fall, spring, 3 credits
2 lecs, 1 sec . Fall: M. Sansalone; spring
G. G. Deierlein

For description see Engineering Common Courses.
[CEE 120 Readings on the Environment
Spring. 1 credit. Not offered 1994-95 C. A. Shoemaker.

A reading course from an introductory environmental text. Topics include structure and dynamics of ecosystems, water habitats and communities, water resources, toxic-waste pollution of surface and groundwater, international water-pollution problems, energy resources, nuclear-waste disposal, hydroelectric power, environmental carcinogens. Not available to students receiving credit for ENGRI 113 or Natural Resources 201.]

CEE 241 Engineering Computation (also ENGRD 241)
Spring. 3 credits. Prerequisites: COM S 100 and Math 293. Corequisite: Math 294.

2 lecs, 1 rec, 2 evening exams. Staff. For description see Engineering Common Courses.

## CEE 304 Uncertainty Analysis in Enginearing

Fall. 4 credits. Prerequisite: first-year calculus.
J. Stedinger or M. Grigoriu An introduction to probability theory, statistical techniques, and uncertainty analysis, with examples drawn from civil, environmental, agricultural, and related engineering disciplines. The course covers data presentation, probability theory, commonly used probability distributions, parameter estimation, goodness-of-fit tests, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, models of vehicle arrivals, analysis of return-period calculations, total quality management, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties

## CEE 309 Special Topics in Clvil and

 Environmental EngineeringFall, spring. $1-6$ credits.
Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.
CEE 400 Senior Honors Thesis
Fall, spring. Variable credits.
Staff.
Available to students admitted to the CEE Honors Program. Supervised research or project work resulting in an honors thesis.

## CEE 501 Civil and Environmental

 Engineering Design Project I Fall. 3 credits. Required for students in the M.Eng.(Civil) program.School faculty and visiting engineers. Design of major civil engineering project Planning and preliminary design in fall term; final design in January intersession (CEE 502)

CEE 502 Civil and Environmental Engineering Design Project II Spring (work done during January intersession). 3 credits. Required for students in the M.Eng.(Civil) program. Prerequisite: CEE 501 School faculty and visiting engineers. A continuation of CEE 501.

## CEE 503 Professional Practice in Engineering

Spring. 3 credits. Required for and limited to students in the M.Eng.(Civil) program. W. R. Lynn.

Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

## CEE 601 Water Resources and

 Environmental Engineering SeminarFall. 1 credit. Staff.
Presentation of topics of current interest

## Remote Sensing

[CEE 411 Remote Sensing: Environmental Applications (also SCAS 461)
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95

2 lecs, 1 lab.
A survey of how remote sensing is applied in various environmental disciplines. Laboratory emphasis is on using aircraft and satellite imagery for inventorying and monitoring surface features in engineering, planning,
agriculture, and natural resource assessments.]

## CEE 610 Remote Sensing Fundamentals

 (also Agronomy 660)Fall. 3 credits. Prerequisite: permission of instructor.

2 lecs, 1 lab. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data aquisition; data analysis and interpretation; and project design.

## CEE 615 Digital Image Processing

Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (Mathematics 109) and statistics (CEE 304 or Agricultural Economics 310), or permission of instructor.

$$
2 \text { lecs, } 1 \text { lab. W. D. Philpot. }
$$

An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.
[CEE 616 Digital Image Analyais
Spring. 3 credits. Prerequisites: calculus (Mathematics 192), statistics (CEE 304 or Agricultural Economics 310), and computer programming (FORTRAN or C), or permission of instructor. Not offered 1994-95.

2 lecs, 1 lab. W. D. Philpot.
Pattern recognition, feature extraction, and classification of digital images as used in remote-sensing applications. Both spectral and spatial patterns will be considered. Assignments will require the development of computer programs and will make use of existing image-processing software and graphics.]
CEE 617 Project-Remote Sensing On demand. 1-6 credits.

## Staff.

Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

## CEE 618 Special Topics-Remote

 SensingOn demand. 1-6 credits. Staff.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

## CEE 619 Seminar in Remote Sensing (also SCAS 662)

Spring. 1 credit. S-U grades only Staff.
Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry,

Cornell, or other research or academic institutions.

## CEE 710 Research-Remote Sensing

On demand. $1-6$ credits.
Staff.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 810 Thesis-Remote Sensing
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Environmental and Public Systems

See also CEE 120.
CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits Primarily for juniors and seniors. D. P. Loucks.

For description see Engineering Common Courses.

## CEE 422 The Economics of Infrastructure and a Sustainable Environment

Fall. 4 credits. Prerequisite: Mathematical version of intermediate micro-economics (CEE 321 or ECON 203 or 313).

2 lecs, final exam. R. E. Schuler. Course examines the broad economic, physical, and ecological environments in which products, projects and/or engineered systems are implemented. Market failures that must be corrected to sustain a modern industrial economy are studied, including problems of the environment, public goods, renewable resources, scale economies, urbanization, demographics and economic development. Important planning tools presented include methods for assessing project demand, cost-benefit analysis, choosing the proper discount rate, dealing with uncertainty, financial constraints, and when and how to price. Also discussed are problems of sustainability and global climate change, the allocation of scarce and previously nonmarketed resources, and the planning and management of activities with uncertain environmental consequences.

## [CEE 423 Environmental Quality Systems

 AnalysisSpring. 3 credits. Prerequisites: Math 294 and optimization (CEE 323 or ABEN 475, OR\&IE 320). Intended for undergraduates who have not taken ABEN 320 or ABEN 475. Most lectures concurrent with CEE 623. Not offered 1994-95.

3 lecs. C. A. Shoemaker
Applications of optimization and simulation methods to the development of plans and the design and operation of facilities for managing environmental quality. Algorithms for nonlinear programming, linear programming, and sensitivity analysis. See description of CEE 623 for water quality applications.]

## [CEE 529 Water and Environmental

 Resources Problems and PoliciesFall. 3 credits. Intencled primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. Not offered 1994-95.

Lec-disc. D. Allee, L. Dworksy
Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.]

CEE 620 Water-Resources Systems I Fall. 3 credits. Prerequisite: CEE 323 or equivalent.
D. P. Loucks

Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.
CEE 621 Water-Resources Systems II Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor.
J. R. Stedinger, D. P. Loucks.

Advanced topics in the development and use of optimization and simulation models for water-resources planning. Stochastic
hydrologic modeling and stochastic river-basin and reservoir models. Incorporates material in CEE 622.
CEE 622 Stochastic Mydrologic Modeling On demand. 2-3 credits. Prerequisite: CEE 304 or equivalent.

> J. R. Stedinger.

Develops statistical techniques used to analyze and model stochastic processes. Examination of Box-Jenkins, fractional-Brownian noise, and other single- and multiple-site stream-flow models; review of flood-frequency estimation issues; analysis of simulation output; parameter estimation and Bayesian inference.

## [CEE 623 Environmental Quality Systems Analysis

Spring. 3 credits. Prerequisites: Math 294 and optimization (ABEN 475, CEE 593, OR\&IE $320 / 520$ or permission of instructor). Not offered 1994-95.
C. A. Shoemaker

Applications of optimization, simulation methods, and uncertainty analysis to the design and operation of facilities for managing the quality of surface- and groundwater. Applications include location of wastewater, solid waste, and hazardous-waste facilities, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated aquifers. Optimization applications use linear programming, and integer, dynamic, and nonlinear programming.!

## CEE 628 Environmental and Water

 Resources Systems Analysis SeminarSpring. 1 credit.
J. R. Stedinger

Graduate students and faculty members give informal lectures on various topics related to environmental or water resources systems planning, analysis, and on-going research.

CEE 722 Environmental and Water Resources Systems Analysis

## Research

On demand. Variable credit. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff.
Investigations of particular environmental or water resources systems problems.

## CEE 729 Special Topics in

 Environmental or Water Resources Systoms AnalysisOn demand. Variable credit.
Staff.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

## CEE 820 Thesis-Environmental and Water Resource Systems

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Fluid Mechanics and Hydrology

CEE 331 Fluid Mechanics
Fall. 4 credits; usually offered in summer for Engineering Co-op Program. Prerequisite: Engr 203 (may be taken concurrently).

3 lecs, 1 rec, evening exams. Staff. Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, openchannel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

## CEE 332 Hydraullc Engineering

Spring. 4 credits. Prerequisite: CEE 331
2 lecs, 1 lab, field trip. Staff.
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

## CEE 431 Geohydrology (also ABEN 471

 and CEOL 445)Fall. 3 credits. Prerequisite: permission of instructor.
W. H. Brutsaert and others.

An intermediate course in aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport

## CEE 432 Hydrology

Spring. 3 credits. Prerequisite: CCE 331. Intended for undergraduates. Lectures concurrent with CEE 632.

3 lecs. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.

## CEE 433 Pollutant Transport and

 Transformation in the Environment Fall. 3 credits. Prerequisite: CEE 331. Intended for undergraduates. Lectures concurrent with CEE 655.3 lecs. J. J. Bisogni, G. H. Jirka. Introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment. See description for CEE 655.

## CEE 630 Advanced Fluid Mechanics

Fall. 3 credits. Prerequisite: CEE 331
Offered alternate years.
3 lecs. J. A. Liggett.
Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.

## CEE 631 Flow and Contaminant

Transport Modeling in Groundwater Spring. 3 credits. Prerequisites: Mathematics 294 or equivalent, Engr 241 or experience in numerical methods and programming, and elementary fluid mechanics.
J. A. Liggett.

Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective diffusion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

## CEE 632 Hydrology

Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.

Physical and statistical prediction methods for design related to hydrologic processes. Hydrometeorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.

## [CEE 633 Flow in Porous Media and

 GroundwaterFall. 3 credits. Prerequisite: CEE 331. Not offered 1994-95.
W. H. Brutsaert.

Fluid mechanics and equations of single-phase and multiphase flow; methods of solution Applications involve aquifer hydraulics, pumping wells; drought flows; infiltration. groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.]

## CEE 634 Boundary Layer Meteorology

 Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor.3 lecs. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

## [CEE 635 Coastal Engineering I

Spring. 3 credits. Prerequisite: CEE 331. Not offered 1994-95.

3 lecs. P. L.-F. Liu.
Linear wave theory, wave generation by wind, analysis of fluid forces on floating and fixed coastal structures and modification of waves
and currents by these structures, coastal processes, and coastal sediment motion.]
[CEE 636 Environmental Fluid Mechanics Spring. 3 credits. Prerequisite: CEE 655 or permission of instructor. Offered alternate years. Not offered 1994-95.
G. H. Jirka.

Mass- and heat-transport processes in the environment and their interaction with pollutant discharges. Mechanics of discretely and continuously stratified fluids, internal waves, density currents, selective withdrawal, and baroclinic motions. Flow stability, mixing, and turbulence. Turbulent diffusion and shear flow dispersion, including effects of buoyancy. Convective instabilities and mixedlayer dynamics. Concentrated sources of momentum and buoyancy: jets and plumes and their behavior in the environment. Applications to mixing processes in rivers, lakes, the ocean, and the atmosphere.]

## CEE 638 Hydraulics Seminar

Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering.

## Staff.

Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639 Special Topics in Hydraulics On demand. Variable credit. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology
[CEE 730 Coastal Engineering II
Spring. 3 credits. Prerequisite: CEE 635. Not offered 1994-95.

3 lecs. P. L.-F. Liu.
Review of linear and nonlinear theories for ocean waves, applicability of different wave theories to engineering problems, waveenergy transmission, tsunamis, behavior of submerged and floating bodies, harbor agitations, ship waves.]

## [CEE 732 Computational Hydraulics

Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 1994-95. J. A. Liggett.

Numerical methods for solving hydraulics and fluid-mechanics problems. Solutions for elliptic, parabolic, and hyperbolic equations. Finite-difference, finite-element, and bound-ary-integral methods.]

## [CEE 734 Experimental Methods in Hydraulics

On demand. 2 credits. Prerequisite: CEE 331. Not offered 1994-95.

## G. H. Jirka.

Methods used in planning and conducting laboratory and field experiments in hydraulics and fluid mechanics. Dynamic similarity, modeling laws, and applications. General operating principles and performance characteristics of measurement instruments. Specific devices for measurement of fluid properties, pressure, and flow. Data acquisition, processing, and signal analysis. Laboratory demonstrations.]
CEE 735 Research in Hydraulics
On demand. Variable credit Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results
should be submitted to the instructor in charge in the form of a research report

## CEE 830 Thesis-Fluid Mechanics and

 HydrologyFall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis resarch topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Geotechnical Engineering

CEE 341 Introduction to Geotechnical Engineering
Spring. 4 credits.
3 lecs, 1 lab-tutorial. Staff.
Soil as an engineering material. Chemical and physical nature of soil. Engineering properties of soil. Stresses and stress analysis of soil. Basic theory and design for water flow in soil, one-dimensional consolidation of clay and silts, and shear-strength problems. Introduction to slope stability, earth pressure, geosynthetics, and landfill and wastecontainment issues. Introduction to laboratory testing. Synthesis of soil analysis and laboratory-test results for the design of engineering structures.

## CEE 640 Foundation Engineering

Fall. 3 credits. Prerequisite: CEE 341
3 lecs, optional tutorial. Staff.
Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

## CEE 641 Retaining Structures and

 SlopesSpring. 3 credits. Prerequisite: CEE 341. 3 lecs, optional tutorial. Staff.
Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

## CEE 643 Pavement Engineering (also

 ABEN 692)Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: CEE 341 and 642.

3 lecs, 1 lab. L. H. Irwin.
For description see ABEN 692.
CEE 648 Seminar in Geotechnical Engineering
Fall, spring. 1 credit.

> Staff.

Presentation and discussion of topics in current research and practice in geotechnical engineering.
CEE 649 Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff.
Supervised study of special topics not covered in the formal courses.
CEE 740 Engineering Behavior of Soils Spring. 4 credits. Prerequisite: CEE 341. 3 lecs, 1 lab. Staff. Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of
stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Fieldtesting methods for determining properties based on laboratory testing. Laboratory sessions include in-situ field testing, simple index tests, and complete laboratory characterization of important soil properties.
CEE 741 Rock Engineering
Fall. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology.

2 lecs, 1 lab. Staff
Geological and engineering classifications of intact rock, discontinuities, and rock masses Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

## CEE 744 Advanced Foundation

 EngineeringSpring. 2 credits. Prerequisite: CEE 640. 2 lecs. Staff.
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

## CEE 745 Soil Dynamics

Spring. 4 credits. Prerequisite: permission of instructor.

3 lecs, 1 lab. Staff.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions. Laboratory experiments and demonstrations using resonant column and a range of cyclic testing equipment.
CEE 746 Embankment Dam Engineering Spring. 2 credits. Prerequisites: CEE 641 and 741 , or permission of instructor.

2 lecs. Staff.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.
[CEE 747 Case Studies in Ceotechnical Engineering
Spring. 3 credits. Prerequisites: CEE 641 and 741. Not offered 1994-95.

Staff.
Study of case histories in geotechnical engineering. Critical evaluation of successful and unsuccessful projects. Oral presentations and engineering report evaluation of each case]

## [CEE 748 Tunnel Engineering

Spring. 2 credits. Prerequisites: CEE 641 and 741. Not offered 1994-95.

2 lecs. Staff.
Principles of analysis and design for earth and rock tunnels. Materials, construction methods, stability and support systems, deformations, and performance monitoring.]

CEE 749 Research in Geotechnical Engineering
On demand. $1-6$ credits. Staff.
For the student who wants to pursue a particular geotechnical topic in considerable depth

## CEE 840 Thesis-Geotechnical Engineering

Fall, spring. $1-12$ credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Environmental Engineering

CEE 351 Environmental Quality

## Engineering

Spring. 3 credits.
3 lecs. L. W. Lion
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Emphasis on water-quality control concepts, theory, and methods. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

CEE 352 Water Supply Engineering
Fall. 3 credits. Prerequisite: CEE 351.
3 lecs. R. I. Dick.
Analysis of contemporary threats to human health from water supply systems. Criteria and standards for potable-water quality. Water-quality control theory. Design of water supply facilities.
CEE 651 Microbiology for Environmental Engineering
Fall. 2 credits. Prerequisite: one semester of college chemistry.

2 lecs. J. M. Gossett.
A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

## CEE 653 Water Chemistry for

 Environmental EngineeringFall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor.

3 lecs, 3 recs. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/ dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

## CEE 654 Aquatic Chemistry

Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 287-288.

3 lecs. J. J. Bisogni.
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acidbase reactions, buffer systems, mineral precipitation, coordination and redox
reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

## CEE 655 Pollutant Transport and

 Transformation in the Environment Fall. 3 credits. Prerequisite: CEE 331. J. J. Bisogni, G. H. Jirka.An introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment. Advective and diffusive mass transport, turbulent diffusion and shear-flow dispersion in water or atmosphere, dispersion in groundwater flow, homogeneous and heterogeneous chemical reactions and their effects on transport phenomena, air-water-soil interface transfer processes. Emphasis on physical mechanisms, with some applications to surface water, groundwater, and atmospheric transport and quality models.

## CEE 658 Sludge Treatment, Utilization, and Disposal

Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor.

3 lecs. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes as functions of process design and operational variables. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues with assessment of potential environmental impacts. Fundamental factors influencing performance of treatment processes for removing water from sludges and for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludgemanagement processes to approach optimal design.

## CEE 659 Environmental Quality Engineering Seminar

Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering.

## R. I. Dick.

Presentation and discussion of current research and design projects in environmental engineering.

## CEE 750 Research in Environmental

 EngineoringOn demand. 1-6 credits.
Faculty.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

## CEE 755 Environmental Engineering

 Processes IFall. 3 credits. Prerequisite: Previous or concurrent enrollment in CEE 653 or permission of instructor.

3 lecs. J. M. Gossett.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

## CEE 756 Environmental Engineering

 Processes IISpring. 3 credits. Prerequisites: CEE 651 and 755 , or permission of instructor.

3 lecs. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment process.

## CEE 757 Environmental Engineering

 Processes Laboratory IFall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755.

1 lab. J. M. Gossett, L. W. Lion. Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

## CEE 758 Environmental Engineering Processes Laboratory II

Spring. 2 credits. Prerequisite: CEE 651 and concurrent enrollment in CEE 756.

1 lab. J. M. Gossett.
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria

## CEE 759 Special Topics in

 Environmental EngineeringOn demand. Variable credit.
Hours to be arranged. Staff. Supervised study in special topics not covered in formal courses.

## CEE 850 Thesic-Einvironmontal Engineering

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Transportation

## CEE 361 Introduction to Transportation Engineering

Spring; usually offered in summer for
Engineering Co-op Program. 3 credits.
A. H. Meyburg.

Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supplydemand interactions; system planning, design, and management; traffic flow and control intersection and network analysis. Institutional and energy issues; environmental impact.

## CEE 362 Mighway Engineering (also ABEN 491)

Fall. 3 credits. Prerequisites: Fluid mechanics (may be taken concurrently) and junior standing in engineering.

2 lecs, 1 lab. L. H. Irwin.
For description, see ABEN 491.

CEE 463 Transportation and Information Technology
Fall. 3 credits. Prerequisite: CEE 361 or permission of the instructor.
L. Nozick.

Focuses on shift from building new infrastructure to improving the utilization of current facilities. Reviews major legislation that solidifies this shift and examines the role of computer and telecommunications technology Technologies to be considered include tags and readers, weigh-in-motion, cellular communication technology, the global positioning system, on-board navigation systems, databases, and distributed databases.

## [CEE 660 Transportation Planning and Pollcy

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95. A. H. Meyburg.

Public-sector planning and decision making for transportation. Problems of urban transportation and their implications. A systems-analysis approach to formulation of cransportation policy at the local, regional, state, and federal levels. Consideration of urban-transportation planning models.]
CEE 664 Transportation Systems Design Spring. 3 credits. Prerequisite: CEE 361. M. A. Turnquist.

Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

## CEE 762 Transportation Research

On demand. Variable credit.
Staff,
In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

## CEE 764 special Topics in Transportation

On demand. Variable credit. Staff.
Advanced subject matter not covered in depth in other regular courses.

## CEE 860 Thesis-Transportation

 EngineoringFall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Structural Enginearing

See also CEE 116.

## CEE 371 structural Behavior

Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: Engr 202.

3 lecs, one 2-hour lab, evening exams. G. G. Deierlein.

Fundamental concepts of structural engineering: behavior, analysis, and design. Loads, structural materials, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of
behavior of steel and concrete members. Introduction to limit states design.

## CEE 372 Structural Analysis

Spring. 4 credits. Prerequisite: CEE 371. 3 lecs, one 2-hour lab, evening exams. Staff.
Fundamentals of statically indeterminate structures. Moment-area and virtual-work methods of displacement computation. Matrix flexibility and stiffness methods. Moment distribution analysis. Influence lines.
Computer applications to practical structures. Role and limitations of analysis in design. The art of structural modeling for analysis and design.

## CEE 373 Design of Concrete Structures

Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor.

2 lecs, one 2 -hour sec, design project.
P. Gergely.

Behavior and design of reinforced concrete and prestressed concrete structures. Design project.

## CEE 374 Design of Steel Structures

Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor.

3 lecs, one 2 -hour sec, evening exams, design project. T. Pekōz.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

## CEE 376 Civil Engineering Materials

## Spring. 3 credits.

2 lecs, 1 lab. Staff.
Engineering properties of concrete, steel, wood, masonry, and other structural materials. Design characteristics and significance of test results of materials used in engineering works. Developing QA/QC programs and writing specifications. Extensive laboratory testing and report writing.

## CEE 671 Random Vibration

Fall. 3 credits. Prerequisites: M\&AE 326, CEE 779, and OR\&IE 260; or equivalent and permission of instructor.
M. D. Grigoriu.

Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, FokkerPlanck and Kolmogorov equations, Itō calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

## CEE 672 Fundamentals of Structural Mechanics

## Fall. 3 credits.

M. D. Grigoriu.

Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, energy principles, introduction to finite-element method.
CEE 673 Advanced Structural Analysis Fall. 3 credits. Prerequisites: CEE 372 and computer programming.

Evening exams, programming project.
J. F. Abel.

Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and
accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

## CEE 675 Concrete Materials and

## Construction

Spring. 3 credits. Prerequisite: CEE 376 or equivalent.

2 lecs, 1 lab. K. C. Hover.
Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior. Lab assignments.

## [CEE 677 Stochastic Mechanics

Spring. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1994-95.
M. D. Grigoriu.

Review of concepts of probability theory, random processes, and random fields.
Analytical and numerical methods for reliability analysis. Methods for solution of random eigenvalue problems, equilibrium of uncertain systems and systems with random imperfections, and propagation problems in stochastic systems. Applications include stochastic finite elements, probabilistic fracture mechanics, and dynamic Daniels systems.]
CEE 680 Structural Engineering Seminar
Fall, spring. 1 credit. Limited to qualified seniors and graduate students.

Staff.
Presentation of topics of current interest in the field of structures.

## CEE 770 Engineering Fracture

 MechanicsFall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years.

2 lecs, 1 lab. A. R. Ingraffea.
Fundamentals of fracture-mechanics theory. Energy and stress-intensity approaches to fracture. Mixed-mode fracture. Fatigue-crack propagation. Finite- and boundary-element methods in fracture mechanics. Introduction to elastic-plastic fracture mechanics. Interactive computer graphics for fracture simulation. Laboratory techniques for fracture-toughness testing of metals, concrete, and rock.

CEE 772 Finite-Element Analysis
Spring. 3 credits. Prerequisites: CEE 672 and 673, or permission of instructor.
J. F. Abel.

Conceptual, theoretical, and practical bases for finite-element analysis in structural mechanics and other disciplines. Development and evaluation of formulations for one-, two-, and three-dimensional elements. Introduction to boundary-element analysis. Interactive computer graphics for finite- and boundaryelement analysis.

## CEE 773 Structural Reliability

Spring. 3 credits. Prerequisite: permission of instructor.
M. D. Grigoriu.

Review of probability theory, practical measures for structural reliability, secondmoment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfection-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.

## CEE 774 Prestressed Concrete

## Structures

Spring. 3 credits. Prerequisites: CEE 373 and 376 or equivalent. Recommended: CEE 775. 3 lecs. R. N. White.
Behavior, analysis, and design of pretensioned and posttensioned concrete structures.
Flexure, cracking shear, bond, prestress losses, deflection predictions, and anchorage zone deign. load-balancing concepts; partial prestressing. Strength and serviceability of structural elements and systems, including buildings, parking garages, and bridges
CEE 775 Advanced Reinforced Concrete Fall. 3 credits. Prerequisites: CEE 373 and 376 or equivalent.

3 lecs. R. N. White
General flexural analysis, shear and torsion using strut-and-tie models, biaxial bending of columns, slender columns, beam-supported and flat-plate slabs, and strip method for slab design. Deep beams, brackets, and corbels by traditional methods and using strut-and-tie modes. Redistribution effects and ductility demands. Walls; lateral forces on wall systems. Building systems and introduction to bridge systems.

## CEE 776 Advanced Design of Metal

 StructuresFall. 3 credits. Prerequisite: CEE 374 or equivalent.
T. Pekōz.

Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

## CEE 777 Advanced Behavior of Metal

 StructuresSpring. 3 credits. Prerequisite: CEE 374 or equivalent.
T. Pekōz.

Analysis of elastic and inelastic stability. Behavior and design of hot-rolled and coldrolled steel and aluminum members, elements, and frames. Critical review of design specifications.

## [CEE 778 Shell Theory and Design

Spring. 2-3 credits. Offered alternate years. Not offered 1994-95.
P. Gergely.

Fundamentals of practical shell theory. Differential geometry of surfaces; membrane and bending theory of shells; analysis and design of cylindrical shells, polygonal domes, and paraboloids.]

CEE 779 Structural Dynamics and Earthquake Engineering
Spring. 3 credits.
P. Gergely.

Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

## [CEE 780 Advanced Concrete Material Science

Fall. 3 credits. Prerequisites: CEE 376 or equivalent and CEE 675. Not offered 1994-95.

> K. C. Hover.

Advanced study of the chemistry, physics, and microstructure of cement and concrete. Investigation of cement manufacture and chemistry. hydration reactions and effect of admixtures. Study of microstructure with scanning electron microscopy, and porosimetry. Engineering properties and behavior include failure mechanisms and elastic and
viscoelastic behavior. Durability. Student presentations.]
[CEE 782 Advanced Topics in FiniteElement Analysis
Fall. 3 credits. Prerequisite: CEE 772. Offered alternate years. Not offered 1994-95. J. F. Abel, A. R. Ingraffea.

Lectures and colloquia on selected advanced topics and research in progress, including dynamics, nonlinear analysis, shells, fracture mechanics, fluid dynamics, and computer graphics.]

## CEE 783 Civil and Environmental

 Engineering Materials ProjectOn demand. 1-3 credits.
Staff.
Individual projects or reading and study assignments involving engineering materials.

## CEE 785 Research in Structural

 EngineeringOn demand. Variable credit.
Hours to be arranged. Staff.
Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

## CEE 786 Special Topics in Structural Engineering

On demand. Variable credit.
Hours to be arranged. Staff.
Individually supervised study or independent design or research in specialized topics not covered in regular courses.
CEE 880 Thesis-Structural Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

## Engineering Management

## [CEE 590 Engineering Management

 PracticeFall. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95 (see CEE 692).
K. C. Hover.

An introduction to the work and skills of management. Planning, organizing, communicating, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, in-class role-playing exercises, and talks by visiting speakers.]

## CEE 591 Engineering Management

 ProjectFall. 3 credits. Prerequisite: permission of instructor.
K. C. Hover, M. A. Turnquist. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

## CEE 592 Engineering Management

 ProjectSpring. 3 credits. Prerequisite: permission of instructor.
K. C. Hover, M. A. Turnquist.

A continuation of CEE 591.

## CEE 593 Engineering Management

 Methods I: Data, Information, and ModelingFall. 3 credits. Prerequisites: OR\&IE 320 and OR\&IE 270 or CEE 304 or equivalent. L. Nozick.

Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.
CEE 594 Engineering Management Methods II: Managing Uncertain Systems
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor.
L. Nozick.

Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

## CEE 595 Construction Planning and Operations

Fall. 3 credits. Prerequisite: permission of instructor.

3 lecs. K. C. Hover.
A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, design of falsework and shoring systems, construction loadings, materials handling for construction, optimization of construction processes, applications of computer methods.
CEE 597 Risk Analysis and Management Spring. 3 credits. Prerequisite: CEE 304 or OR\&IE 270 or equivalent.

3 lecs. J. R. Stedinger.
Course develops a working knowledge of risk terminology, analytic tools used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the U.S., transportation risks, transportation of hazardous materials, waste incineration and remediation, public health risks such as AIDS, regulatory policy, risk communication, environmental risk issues in the media, and risk management.

## CEE 692 Project Management

Fall. 3 credits. Prerequisite: permission of instructor.
M. A. Turnquist, F. J. Wayne Jr. Methods for managing projects. Planning, scheduling, and controlling projects. Functioning as a project manager in various types of organizations. Forming teams and managing group dynamics. (For 1994-95, this is a substitute for CEE 590.)

## CEE 694 Research in Engineering

 ManagementOn demand. 1-6 credits.
Staff.
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

## COMPUTER SCIENCE

The Department of Computer Science is part of both the College of Arts and Sciences and the College of Engineering.

## COM S 099 Fundamental Programming Concepts

Fall. 2 credits. No prerequisites. S-U grades only.

1 lec, 1 lab.
This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Students who do not intend to take COM S 100 but want some introduction to computers and programming should take COM S 101 instead. Students cannot receive credit for COM S 101 and COM S 099. Basic programming concepts and problem analysis are studied. The programming language used is Pascal. Students with previous programming experience should not take this course.

## COM S 100 Introduction to Computer Programming

Fall, spring, summer. 4 credits. Students who plan to take COM S 101 and also 100 must take 101 first.

2 lecs, 1 rec (optional), 3 evening exams. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Pascal. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During most semesters, two versions of COM S 100 are available as described below.

## COM S 100a Introduction to Computer Programming

Standard version of COM S 100. No collegelevel mathematics is assumed. Register for COM S 100.

## COM 5 100b Introduction to Computer Programming

Prerequisite: MATH 111, 191 or equivalent. Not offered every semester.
Alternative version of COM S 100 , emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100 . COM S 100 b is not always available at all COM S 100 lecture hours.

## COM S 101 The Computer Age (also

 ENGRG 101)Fall, summer. 3 credits. Not offered every year. Credit is granted for both COM S 100 and 101 only if 101 is taken first. An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics, natural-language processing, and machine intelligence Students become acquainted with the concept of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in COM S 100.

COM S 107 An Introduction to SCHEME
Spring. 1 credit. Prerequisite: Introductory course in PASCAL, or equivalent programming experience.

3 lecs.
An accelerated introduction to SCHEME, a dialect of LISP. Recommended for students who intend to pursue the computer science major. Taught in the first four weeks of the semester.

## COM S 172 An Introduction to Artificial Intelligence (also ENGRI 172)

Spring. 3 credits. Prerequisites: COM S 100 or COM S 101 or equivalent computer experience. Enrollment may be limited. Not offered every year.

3 lecs, 2 evening exams
A hands-on introduction to concepts in artificial intelligence. Topics may include heuristic search, game playing, automated theorem proving, natural-language processing, expert systems, neural networks, and/or machine learning. Students will use workstation environments to gain software laboratory experience. Interested students need not be proficient programmers to take this class.

## COM S 211 Computers and Programming (also ENGRD 211)

Fall, spring, summer. 3 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience.

2 lecs, 1 rec, 2 evening exams. Intermediate programming in a high-level language and introduction to computer science. Topics include program development, proofs of program correctness, program structure, recursion, abstract data types, object-oriented programming, data structures, and analysis of algorithms. Pascal is the principal programming language.

## COM S 212 Modes of Algorithmic

 Expression (also ENGRD 212) Fall, spring. 4 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience.2 lecs, 2 recs, 2 evening exams. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme, a dialect of LISP.
COM S 212 emphasizes a varied collection of advanced programming concepts and techniques available in a modern functional programming language. In contrast, COM S 211 focuses on perfecting programming skills in a conventional imperative programming language. Corrective transfers between COM S 211 and 212 (in either direction) are encouraged during the first few weeks of instruction

## COM S 214 A Taste of UNIX and C

Fall, spring. 1-2 credits. Prerequisite: COM S 211 or equivalent programming experience S-U grades only.

3 lecs, 3 weeks ( 1 credit), 6 weeks ( 2 credits).

A brief introduction to the UNIX operating system and the $C$ programming language. Recommended for students who intend to pursue the computer science major. Taught in the first four to eight weeks of the semester The 2 -credit version involves an implementa tion project

## COM S 222 Introduction to Scientific Computation (also ENGRD 222)

Spring. 3 credits. Prerequisites: COM S 100 and pre/corequisite of MATH 221 or MATH 293.

2 lecs, 1 rec, 2 evening exams. An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The Matlab computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation and high-performance Fortran.

## COM S 280 Discrete Structures

Fall, spring, 4 credits. Prerequisite: COM S 211 or 212 or permission of instructor.

3 lecs.
Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs

## COM $\$ 314$ Introduction to Digital

 Systems and Computer Organization Fall, spring, summer. 4 credits. Prerequisite: COM S 211, 212, or equivalent.2 lecs, $1 \mathrm{sec}, 2$ evening exams. Introduction to computer organization. Topics include representation of information, machine-assembly languages, processor organization, interrupts and I/O, memory hierarchies, combinatorial and sequential circuits, data path and control unit design, RTL, and microprogramming.
COM $\mathbf{s} 381$ Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481 Collective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction. 3 lecs.
An introduction to modern theory of computing: automata theory, formal languages, and effective computability.
COM S 400 The Science of Programming Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year. 3 lecs.
The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed Programs are written but not run on a computer

## ENGINEERING - 1994-1995

COM $\$ 401$ Software Engineering: Technology and Technique
Fall. 4 credits. l'rerequisite: COM S 410 and knowledge of the C programming language. An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Effective use of C++, Programming tools, software libraries, and interface definition languages. General techniques will be complemented with programming experience.
COM S 410 Data Structures
Fall, spring, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.

2 lecs, 2 evening exams.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation

## COM S 411 Programming Languages and

 LogicsFall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered every year.

2 lecs.
The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages

## COM S 412 Introduction to Compilers

 and TranslatorsSpring. 3 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 413

2 lecs, 1 lab
Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symboltable manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

## COM S 413 Practicum in Compilers and

 TranslatorsSpring. 2 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 412

1 lab.
A compiler implementation project related to COMS 412

## COM S 414 Systems Programming and Operating Systems

Fall. 3 credits. Prerequisite: COM S 314 or permission of instructor.

2 lecs, 2 evening exams.
An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

## COM S 415 Practicum in Operating Systems

Fall. 2 credits. Prerequisite: COM S 410 Corequisite: COM S 414.

1 lec.
The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language

## COM 5417 Computer Graphics and

 Visualization (also ARCH 374)Spring. 3 credits. Prerequisite: COM S 211 or 212.

2 lecs.
An introduction to the principles of interactive computer graphics and scientific visualization.
Topics include two- and three-dimensional graphics algorithms (perspective transformations, hidden-line and hidden-surface algorithms, parametric surfaces), lighting models, image synthesis, and application to scientific data analysis.

## COM 5418 Practicum in Computer

Graphics (also ARCH 375)
Spring. 2 credits. Enrollment limited.
Permission of instructor. Prerequisite: COM S 211 or 212 . Recommended: COM S 314 . Corequisite: COM S 417.

1 lab.
Programming assignments dealing with interactive computer graphics and visualization of scientific data.

## COM 5421 Numerical Analysis

Fall. 4 credits. Prerequisites: Mathematics 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

3 lecs.
Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation.

## COM S 422 Parallel Computing for Scientific Problems

Spring. 4 credits. Enrollment limited.
Permission of instructor. Prerequisites: Math 294, COM S 222 or COM S 421, knowledge of C and FORTRAN.

3 lecs.
Parallel algorithms and programming environments for important scientific problems, such as fluid flow, systems of particles, and large-scale optimization. This course will involve algorithm development on some of the world's fastest computers, including a Connection Machine and a hypercube.

## COM S 432 Introduction to Database

 SystemsSpring. 3 credits. Prerequisites: Either COM S 211 or 212 , and 410 , or permission of instructor. Recommended: COM S 314. Not offered every year.

2 lecs, 1 rec.
Introduction to modem database management systems. Concepts in data modeling and query processing. Storage structures and access methods. Design and analysis of relational databases. Concurrency control Object-oriented databases.

## COM S 433 Practicum in Database Systems

Spring. 2 credits. Corequisite: COM S 432 Not offered every year.

1 lab.
Issues related to the design and implementation of database-management systems will be addressed. Students will implement a simplified relational database system, including a file-access method and queryprocessing algorithms.

## COM \$ 444 Distributed Systems and Algorithms

Fall. 4 credits. Corequisite: COM S 414 or permission of instructor. Not offered every year.
The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies and paradigms necessary for understanding and designing distributed applications, with an emphasis on faulttolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems

COM S 462 Robotics and Machine Vision Spring. 3 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Corequisite: COM S 463. Not offered every year.

$$
3 \text { lecs. }
$$

Introduction to the science of robotics and machine vision using a combination of programming techniques, applied mathematics, algorithms, and lab experiments. Topics include task-level robot planning and programming, hand-eye systems, feature detection and object recognition, motion planning, shape reconstruction, compliant motion and assembly, model-based planning and recognition, uncertainty and error, active sensing, and manipulation.

## COM $\$ 463$ Robotics and Machine Vision

 LabSpring. 2 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Corequisite: COM S 462. Not offered every year.

$$
1 \text { lab. }
$$

Use physical robots (vision systems, hand-eye systems, and mobile robots) in the Computer Science Robotics and Vision Teaching
Laboratory. Students should be comfortable both with mathematical concepts and programming, know LISP or Scheme, have a mastery of calculus and linear algebra, a strong background in algorithms, and an ability to work independently.

## COM S 472 Foundations of Artificial

 IntelligenceFall. 3 credits. Prerequisites: COM S 107 or COM S 212, COM S 280 and COM S 410. Open to juniors, seniors, and graduate students.

$$
3 \text { lecs. }
$$

A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, search, problem solving, natural-language processing, vision, robotics, logic and deduction, planning, and machine learning

## COM S 473 Practicum In Artificial Intelligence

Fall. 2 credits. Prerequisite: COM S 107 or COM S 212, COM S 280 and COM S 410. Corequisite: COM S 472. 1 lab.
Project portion of COM S 472. Topics include Common LISP programming, representation systems, deductive retrieval, databases and frame languages, and truth-maintenancesystem implementations.

## COM S 481 Introduction to Theory of

 ComputingFall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481 Corrective transfers between COM S 481 and COM S 381 (in either direction) are encouraged during the first few weeks of instruction. 3 lecs.
A faster-moving and deeper version of COM S 381

## COM S 482 Introduction to Analysis of Algorithms

Spring. 4 credits. Prerequisites: COM S 410 and either 381 or 481 , or permission of instructor.

3 lecs.
Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

## COM S 486 Applied Logic (also Mathematics 486)

Fall or spring. 4 credits. Prerequisites: Mathematics 222 or 294 , COM S 100 , and some additional course in mathematics or theoretical computer science. Not offered every year.

2 lecs, 1 lab to be arranged.
Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and l-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research
Fall, spring. $1-4$ credits.
Independent reading and research for undergraduates.

## COM S 501 Software Engineering: Technology and Technique

Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the $C$ programming language. An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Effective use of C++. Programming tools, software libraries, and interface definition languages. General techniques will be complemented with programming experience.

## COM S511 Modern Programming Languages

Fall. 4 credits. Prerequisites: COM S 410 and a project course or permission of instructor. Not offered every year.

2 lecs.
Current trends in programming languages, with emphasis on programming methodologies supported by languages. Topics will include object-oriented programming,
modularity and data abstraction, functional and declarative programming, concurrency, logic programming, and programming language design. There will be programming exercises in several new languages.

## COM S 514 Practical in Distributed Systems

Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year.

$$
2 \text { lecs. }
$$

Practical issues in designing and implementing distributed software. Topics include local and wide-area network protocols, replicated data, dynamic reconfiguration, monitoring for and reacting to failures or recoveries, distributed computation, synchronization, and techniques for expressing coarse-grained parallelism at the application level.

## COM S 515 Practicum in Distributed

 SystemsFall or spring. 1-2 credits, Co-requisite: COM S 514.

1 lec.
The practical aspects of distributed systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year, at the discretion of the instructor.
COM 5516 High-performance Computer Architecture
Spring. 4 credits. Prerequisite: COM S 314 required; COM S 412 or 414 highly recommended.

2 lecs.
Introduces techniques used in high-performance computer architecture. Covers pipelining of instruction execution to superscalar, superpipelined, and speculative architectures; memory system design, including caches, operating system support in the form of naming and protection schemes; introduction to parallel architectures.

## COM S 522 Parallel Computing for Scientific Problems

Spring. 4 credits. Enrollment limited. Permission of instructor. Prerequisites: Math 294, COM S 222 or COM S 421, and knowledge of C and FORTRAN.

3 lecs.
Parallel algorithms and programming environments for important scientific problems, such as fluid flow, systems of particles and large-scale optimizations. This course will involve algorithm development using some of the world's fastest computers, including a Connection machine and a hypercube. This course has the same lectures and exams as COM S 422, but greater project work is required.

## COM 5572 Artificial Intelligence Programming

Fall. 4 credits. Prerequisite: COM S 472 or permission of instructor. Not offered every year.

3 lecs.
Review of Common LISP programming and an overview of AI programming techniques. Discussion focuses on practical issues faced by implementors of large LISP systems. Topics may include discrimination nets, agendas, deductive retrievers, slot and filler databases, backtracking problem solvers, and truth-maintenance systems. Students will be expected to implement several of the systems discussed in class.

## COM S 600 Computer Sclence and Programming

Fall. 1 credit. Prerequisite: graduate standing in computer science or permission of instructor. Not offered every year. 1 lec.
An introduction to practical, modern ideas in programming methodology. Covers style and organization of programs, basic techniques for presenting proofs of correctness of programs, and the use of a "calculus" for the derivation of programs.

## COM $\mathbf{S 6 1 0}$ Multimedia Systems

Fall. 4 credits. Prerequisites: COM S 314 or permission of instructor.

3 lecs.
Hardware and software issues involved in computer manipulation of audio, video, and images. Topics include media capture, representation, compression, editing, processing, storage, and transportation. Special emphasis on the processing of digital video, including algorithms for special effects and automatic extraction of content, and applications of parallel architectures to video processing.

## COM $\mathbf{S} 611$ Advanced Programming Languages

Fall. 4 credits. Prerequisites: COM S 410 and 381 or 481 , or permission of instructor. 3 lecs.
A study of programming paradigms; functional, imperative, and logic programming. The untyped lambda-calculus. The typed lambda-calculus, type systems, polymorphism, type inference. Formal semantics of programming languages. Elements of domain theory and type theory. Models of programming logic.

COM S 612 Compiler Design for High. Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. 3 lecs.
Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

## COM S 613 Concurrent Programming

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year.

$$
2 \text { lecs. }
$$

Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

## COM S 614 Advanced Systems

Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

## 2 lecs.

An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledgebased protocols, performance, scheduling,
concurrency control, and authentication and security issues.

## COM S 615 Theory of Concurrent

 SystemsSpring. 4 credits. Prerequisites: COM S 611 or permission of instructor. Not offered every year.

3 lecs.
Modeling, specification, and verification of concurrent systems. Topics in modeling will include interleaving vs. partial-order semantics, and linear time vs. branching time. Among the specification methods discussed are temporal logic, automata, process algebra, and Petri nets. Verification methods include proof calculi, model checking, and refinement mappings. Advanced topics will include open systems and real time

## COM S 617 Frontiers of Parallel

## Computer Systems

Fall. 4 credits. Prerequisites: COM S 314 or 516 required; COM S 411, 412, or 414 3 lecs.
Focus on the architecture, compiler, and operating system aspects required to support features taken for granted in sequential computing, such as portable parallel programs, powerful debuggers, multi-user machine access, virtual memory, and fast I/O.

## COM S 618 Topics in the Theory of Distributed Systems

Fall. 4 credits. Prerequisites: COM S 444 or COM S 614 or permission of instructor. 2 lecs.
This course focuses on research in distributed systems and algorithms. It covers the fundamental problems and presents some of the latest results and open questions in both message-passing and shared-memory systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

## COM S 621 Matrix Computations

Fall. 4 credits. Prerequisites: Mathematics 411 and 431 or permission of instructor. 3 lecs.
Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The Matlab system is used extensively

## COM S 622 Numerical Optimization and Nonlinear Algebraic Equations

Spring. 4 credits. Prerequisite: COM S 621. 3 lecs.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation

## COM $\mathbf{\$} \mathbf{6 2 4}$ Numercial Solution of Differential Equations

Spring. 4 credits. Previous exposure to numerical analysis, mathematical analysis including Fourier methods, and differential equations. Not offered every year. 3 lecs.
Finite difference and spectral methods for the solution of differential equations. A fastmoving course that begins with a three-week
survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, the treatment of boundary conditions, and multigrid methods. This course combines theory and programming (in Matlab), emphasizing fundamental principles more than applications.

## COM S 635 Automatic Text Processing and Information Retrieval

Spring. 4 credits. Prerequisite: COM S 410 or equivalent or permission of instructor. Letter grade only

2 lecs.
Modern methods for natural language text processing. Topics include text analysis, storage and retrieval, automatic spelling aids, text compression and encryption, language understanding systems, automatic abstracting, and text generation and translation.

## COM \$ 661 Robotics

Fall. 4 credits. Prerequisites: COM S 482 and permission of instructor. Not offered every year.

3 lecs
State-of-the-art in theoretical and experimental robotics, with an emphasis on robot-motion planning. Topics include: Task-level robot planning, collision-free path planning, grasp synthesis, modeling and propagating uncertainty, planning compliant motions for precision assembly, geometrical planning theories, motion planning with dynamics (and dynamic constraints), computational complexity of robot-motion planning, computational theories of friction, impact, and the physics of manipulation, and error detection and recovery in robotics.

## COM 5662 Robotics Laboratory

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered every year.

1 lab.
Introduction to the use of equipment and techniques in a modern robotics laboratory. Includes robot programming, force sensing, compliant motion, and mechanical assembly.

## COM S 664 Machine Vision

Spring. 4 credits. Prerequisites: undergradu-ate-level understanding of algorithms and Math 221 or equivalent

$$
2 \text { lecs. }
$$

An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

## COM S 671 Introduction to Automated Reasoning

Fall. 4 credits. Prerequisites: COM S 611 and 681 and Mathematics 581. Not offered every year.

3 lecs.
Methods to automate reasoning in mathematics, including decision procedures, theorem provers, and formal proof tactics. Various implemented systems such as Edinburgh LCF, Cornell's Nuprl, and the Boyer and Moore theorem prover may be studied. Special topics may include proofs-as-programs, reflection, control operators to interpret classical logics, and parallel theorem proving.

## COM S 672 Advanced Artificial

 IntelligenceSpring. 4 credits. Prerequisite: COM S 472 or permission of instructor.

2 lecs.
Advanced course in the computational study of intelligent behavior. Covers current issues in the design and implementation of agents that operate in the face of limited computational, perceptual, and effectory resources. How agents choose action (planning) and how they improve action choice using feedback from the world (leaming) are the chief topics. Heuristic search with limited resources, planning in dynamic worlds, representations change, reasoning under uncertainty, active learning, knowledge assimilation, AI applications to engineering problems, and building integrated intelligent agents are covered. Exercises include building a small mobile robot and programming a player for a video game.

## COM $\mathbf{S} \mathbf{6 8 1}$ Analysis of Algorithms

Fall. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor.

3 lecs.
Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polyno-mial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

## COM S 682 Theory of Computing

Spring. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor.

## 3 lecs.

Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

## COM S 683 Parallel Algorithms

Fall. 4 credits. Prerequisite: COM S 681 1 lec.
This course is a general survey of parallel algorithms and architectures, based on Introduction to Parallel Algorithms and Architectures: Arrays, Trees, Hypercubes, by F . Thomson Leighton. This course is organized according to architectural paradigms and repeats the analysis of various classes of problems for each class of architectures: arrays and trees, meshes of trees, and hypercubes and related networks. The emphasis is practical. Topics include arrays of processors, systolic retiming, packet routing, randomized packet routing, sorting algorithms, computational geometry, graph and matrix algorithms, fast evaluation of straight-line code, FFT, and NC.

## COM 5684 Introduction to Symbolic

 ComputationSpring. 4 credits. Prerequisites: COM S 381 or 481 , or permission of instructor. Not offered every year.

3 lecs.
Introduction to the algorithms used for algebraic problems in symbolic computing and their mathematical and complexity theoretic foundations. Topics include simplication of, and arithmetic operations with, continued fractions, polynomials, rational functions and elements of algebraic extensions, polynomial factorization, and techniques for questions in algebraic geometry. Related topics may also be included.

COM S 685 Computational Geometry Fall. 4 credits. Prerequisite: COM S 681 or permission of instructor.
The study of algorithms for geometric problems. Topics include: convex hulls, arrangements of lines, planes and hyperplanes, intersection problems, triangulations, proximity (Voronoi diagrams and Delaunay triangulations), geometric searching, randomized algorithms, parallel algorithms, and geometric optimization.

## COM S 709 Computer Science Graduate Seminar

Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.
A weekly meeting for the discussion and study of important topics in the field.

COM 5711 Topics in Programming Languages and Systems
Spring. 4 credits. Prerequisites: COM S 381 or 481 , and 611 , or permission of instructor.
Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.

## COM $\$ 712$ Topics in Programming

 Languages and SystemsSpring. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

2 lecs.
Topics are chosen at instructor's discretion.

## COM S 713 Seminar in Systems and

 MethodologyFall, spring, 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S $600,611,613,615,671$, a logic course, or permission of instructor. Not offered every year.
Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

## COM $\mathbf{S} 714$ Distributed Computing

Spring. 4 credits. Prerequisites: COM S 414 and an advanced systems course such as COM S $613,614,632$, or 643 , or permission of instructor. Not offered every year.

2 lecs.
Principles of distributed computing and their application to fundamental problems. Considerable time will be devoted to modeling distributed computations, the theory of concurrency control, security and protection, and issues in fault tolerance (including consensus problems). Other topics may be optimal resource placement, cache management, the specification of distributed programs, and randomized protocols.
COM 5715 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.
COM S 717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year.

2 lecs.

Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM $\$ 718$ Topics in Computer Graphics Fall or spring. 4 credits. Prerequisite: COM S 417 or permission of instructor. Not offered every year.

1 lec.
Covers advanced topics in computer graphics and applications of computer graphics to scientific computation.

## COM $\mathbf{S} 719$ Seminar in Programming Languages

Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.
COM $\mathbf{5} 721$ Topics in Numerical Analysis Fall. 4 credits. Prerequisite: COM S 621 or 622, or permission of instructor. Not offered every year.

2 lecs.
Topics are chosen at instructor's discretion.
COM $\mathbf{S} 722$ Topics in Numerical Analysis Spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year.

2 lecs.
Topics are chosen at instructor's discretion.
COM 5729 Seminar in Numerical Analysis/ACRI
Fall, spring. $1-4$ credits (to be arranged).
Prerequisite: permission of instructor. S-U
grades only.
COM S 733 Toplcs in Information Processing
Not offered every year.
2 lecs.
Topics are chosen at instructor's discretion.
COM 5739 Seminar in Text Processing and Information Retrieval
Fall, spring. 4 credits. Prerequisite: COM S 635 or permission of instructor.
S-U grades only.
COM $\mathbf{S} 743$ Topics in Fault-Tolerant Distributed Computing
Prerequisites: COM S 614, 643, or 714 . Not offered every year.

1 lec.
A study of the latest results and an exploration of open questions in the area of fault-tolerant distributed computing. Topics may include failure models, reliable broadcasts, synchronization, knowledge, and network partitioning. This course is particularly suited to students interested in pursuing research in this area.

## COM s 747 Seminar in Program Logic

 and Semantics4 credits. Prerequisite: permission of instructor. S-U grades only. Not offered every year.

## COM S 753 Seminar on Work in Progress in Distributed Systems

Fall, spring. 1 credit. Prerequisite: permission of instructor.
A weekly meeting to discuss research problems of interest to the participants. Topics include theoretical and practical aspects of distributed and fault-tolerant computing systems.

## COM S 754 Seminar in Work-in-Progress Distributed Systems

Fall. 1 credit.
1 sec .
COM $\mathbf{\$ 7 6 1}$ Dynamic Manipulation and Scientific Computation
Spring, 4 credits. Prerequisites: COM S 462 or 661 , a strong background in robotics and algorithms (e.g., COM S 481), and permission of the instructor.

1 lec.
Most work in dynamic manipulation, an important new area in robotics, uses computer-controlled devices, and yet has been non-computational in flavor. This course surveys the field and attempts to apply methods from numerical and symbolic computation to cast the field into a precise framework and place it on a firm algorithmic footing. Required readings include papers by a variety of researchers.
COM S 762 Robot Cafê
Spring. 4 credits. Prerequisite: COM S 661
Not offered every year.
Advanced seminar on varying topics.
COM $\mathbf{S} 763$ Topics in Ceometric Matching
Spring. 4 credits. Prerequisite: COM S 685 1 lec .

## COM S 771 Topics in Artificial

 Intelligence4 credits. Prerequisite: permission of instructor. Not offered every year.

## COM S 772 Seminar in Advanced

 Robotics4 credits. Prerequisite: permission of instructor. Not offered every year.
COM $\mathbf{S 7 3}$ Proseminar in Cognitive Studies I (also Cognitive Studies, Philosophy, Linguistics, and Psychology 773)
Fall. 2 credits.
R 1:25-2:40. Staff (taught jointly by faculty from Comell's Cognitive Studies Program, representing fields of computer science, linguistics, philosophy, and psychology). This is a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its presentation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision, and reasoning; parallel distributed processing; and neuropsychology.
COM 5779 Seminar in Machine Learning Fall, spring. Creclit to be arranged. Prerequisite: permission of instructor. S-U grades only.

## COM S 781 Topics in Analysis of

 Algorithms and Theory of Computing Fall. 4 credits. Prerequisites: COM S 681 and 682 , or permission of instructor. S-U grades only.2 lecs.
Topics are chosen at instructor's discretion.

## COM S 782 Topics in Analysis of

Algorithms and Theory of Computing Spring. 4 credits. Prerequisites: COM S 681 and 682, or permission of instructor. S-U grades only

2 lecs.
Topics are chosen at instructor's discretion.

COM S 784 Seminar in Computational Algebra
Fall, spring.
Informal weekly seminar in which current topics in computational algebra and symbolic mathematics are discussed.

COM S 789 Seminar in Theory of Algorithms and Computing
Fall, spring. 2-4 credits. Prerequisite: permission of instructor. S-U grades only.
COM $\mathbf{\$ 7 9 0}$ Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

## COM S 890 Special Investigations in

 Computer ScienceFall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.
COM $\mathbf{5} 990$ Special Investigations in Computer Science
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

## ELECTRICAL ENGINEERING

## Core Courses

ELE E 210 Introduction to Electrical Systems (also ENGRD 210)
Fall, spring. 3 credits. Prerequisites or corequisites: Mathematics 294 and Physics 213.

3 lecs and optional tutorial sections. For description, see Engineering Common Courses.

ELE E 230 Introduction to Digital Systems (also ENGRD 230)
Fall, spring. 4 credits. Prerequisite: COM S 100.

2 lecs, 1 lab.
For description, see Engineering Common Courses.

## ELE E 301 Electrical Signals and

 Systems IFall. 4 credits. Prerequisites: a grade of at least C+ in Engr 210 and C in Mathematics 293 and 294.

3 lecs, 1 rec-computing session.
Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and $z$ transforms; convolution; FFTs and DFTs; applications to modulation, filtering, and sampling.

## ELE E 302 Electrical Signals and

 Systems IISpring. 4 credits. Prerequisite: ELE E 301. 3 lecs, 1 rec.
Linear time-invariant systems as models for electrical networks; network topology; nodal analysis, loop analysis, modified nodal analysis, and state variable analysis; unilateral Laplace transforms for solving vector differential equations; elementary nonlinearities.

## ELE E 303 Electromagnetic Fields and

 WavesFall, summer co-op session. 4 credits. Prerequisites: grades of C or better in Physics 213, 214, and Mathematics 294.

2 lecs, 1 rec.

Electrostatics, magnetostatics, quasistatics; electromagnetic energy and force; Maxwell's equations in integral and differential form; Poynting's theorem; wave equation; plane electromagnetic waves, phase and group velocities, dispersive media; wave reflection and transmission; dielectric and conducting interfaces; guided waves on finite-transmission lines; transient pulse propagation.

## ELE E 304 Electromagnetic Fields and

 ApplicationsSpring. 4 credits. Prerequisite: ELE E 303. 3 lecs, 1 rec.
Theory of electromagnetic fields and waves building on the foundations established in ELE E 303. Recommended for students interested in electrophysics. Review of Maxwell's equations, boundary conditions, vector and scalar potentials, electromagnetic waves and the wave equation. Theory of electromagnetic waves including transmission lines, rectangular and cylindrical waveguides, and dielectric guides. Cavities, radiation from dipoles and linear arrays of dipoles transmitting-receiving relations, radar and scattering cross sections. Depending on time available additional material will be included on wave propagation in anisotropic media such as ferrites and magnetized plasma.

## ELE E 306 Fundamentals of Quantum and Solid-State Electronics

Spring. 4 credits. Prerequisites: Physics 214 and Mathematics 294.

3 lecs, 1 rec-computing session. Introductory quantum mechanics and solidstate physics necessary for understanding lasers and modern solid-state electronic devices. Quantum mechanics is presented in terms of wave functions, operators, and solutions of Schroedinger's equation. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications studied include a simple metal, thermionic emission, and the p-n junction.

## ELE E 308 Fundamentals of Computer Engineering

Spring. 4 credits. Prerequisite: ELE E 230 and CS 211

3 lecs, 1 rec-computing session. An introduction to theoretical topics basic to computer engineering: discrete mathematics; structured computer organization; data structures and algorithms; and computer arithmetic. Practical applications of these concepts.

## ELE E 310 Introduction to Probability and Random Signals

Spring. 4 credits. Prerequisite: Mathematics 294. This course may be used in place of Engr 260 to help satisfy the enginering distribution requirement. It can then also meet a field requirement if 3 additional credits of technical elective are taken.

3 lecs, 1 rec-computing session. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems incorporating these models, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications of these models will be given in such areas as communications, control, and device modeling. Specific topics include the basic concept of probability and its representations through densities, cumulative distribution
functions, and characteristic functions; conditional probability; independence; scalar and vector random variables and nonlinear transformations of data; expectation, conditional expectation, moments, correlation; laws of large numbers and central limit theorem; linear least mean square estimation; Bayes and Neyman-Pearson decision making.

## ELE E 315 Electrical Laboratory I

Fall. 5 credits. Prerequisite: a grade of at least C+ in Engr 210. Satisfies college technical writing requirement.

2 lecs, 2 labs.
Basic electrical and electronic instrumentation. Measurements and design involving circuits with both active and passive elements; characterization of semiconductor devices. Introduction of the personal computer as a laboratory aid. Technical report writing.

## Computer Engineering

ELE E 230 Introduction to Digital Systems (also ENGRD 230)
Fall, spring. 4 credits.
For description, see Engineering Common Courses

## ELE E 423 Computer Methods for Circuit Simulation

Fall. 4 credits. Prerequisite: ELE E 302.
Satisfies undergraduate computer-applications requirement.

3 lecs, open lab.
Numerical techniques presented in the context of circuit simulation. Solution of linear and nonlinear algebraic equations; integration; solution of ordinary differentia! equations; altemative forms of circuit-equation formulation. Starting from a program to simulate simple, linear passive, steady-state circuits, the instructor will add, and the students improve on, procedures that will finally result in a nonlinear transient integrated-circuit simulator that involves most of the techniques discussed in class.

## ELE E 445 Computer Networks and

 TelecommunicationsFall. 3 credits. Prerequisites: ELE E 308 (or COM S 314) and a course in probability. 3 lecs.
Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems; circuit switching, packet switching; broad band switching; protocols; asynchronous transfer mode systems.

## ELE E 475 Computer Structures

Fall. 4 credits. Prerequisite: ELE E 308 (or COM S 280 and 314).

3 lecs, 1 lab.
Methods of designing digital computers and the hardware-software interface to the systems they function with. Topics will include types of control sequencers, memory and I/O organization and interfacing, interrupt hardware design, floating-point hardware and basic architectural alternatives. Laboratory groups will design and build a small digital computer. User-programmable logic devices will be employed for circuit implementation.

## ELE E 476 Digital Systems Design Using Microcontrollers

Spring. 4 credits. Prerequisite: ELE E 308 or COM S 314 (ELE E 475 strongly recommended).

3 lecs, 1 lab.
Design of real-time digital systems using microprocessor-based embedded controllers.

Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work, the lectures being used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. The laboratory environment is that of ELE E 475 enhanced with the addition of an integrated single-board computer based on the 80 C 196 KB microcontroller chip. Programming is in assembly language and (optionally) C.

## ELE E 524 Differential Equation

 Numerical Methods for the Electrical EngineerSpring. 4 credits. Prerequisites: ELE E 301 and ELE E 303. ELE E 423 is helpful. A working knowledge of a scientific programming language is required. Open to both undergraduates and graduates. Satisfies undergraduate computer applications requirement

3 lecs, open lab.
Numerical methods for ordinary and partial differential equations are presented using examples from different areas of electrical engineering. Examples include semiconduc-tor-device simulation, plasma simulation, propagation of solitons in optical fibers, and the modeling of electrostatic fields in micromechanical devices. Numerical methods include particle-in-cell simulation techniques; spectral methods; elementary parabolic, elliptic, and hyperbolic methods; and the boundary-element method. The fundamental notions of accuracy and error, consistency, stability, and convergence are discussed.

## ELE E 539 VLSI Digital System Design

Fall and spring. 7 credits (if taken both semesters). Prerequisite: ELE E 475 or consent of instructor.

Fall: 3 lecs, 1 lab, 1 rec; spring: 1 lec, 1 lab.
Custom VLSI design as seen by a system designer. Emphasis on structured design methodologies for VLSI systems. Topics include MOS transistors, design rules for MOS integrated circuits, implementation of common digital components, clocking disciplines for VLSI, tools for computer-aided design, system design for performance, and novel architectures for VLSI systems. A chip design project and design report are required for fall semester. CAD tools are used extensively Chips are tested for functionality and performance, and the design report is revised in the spring semester. The course may be taken without the design project in the fall for 3 credits.

## ELE E 541 Advanced Computer

 ArchitecturesFall. 3 credits. Prerequisite: ELE E 308 (or COMS 280 and 314).
Design and evaluation of processor architectures are examined in the light of actual implementations. Topics include parallel and pipelined architectures, interleaved memories, cache and virtual memories, I/0 processors, vector and array processors, protection mechanisms, and RISC architectures.

## ELE E 542 Parallel Processing

Spring. 3 credits. Prerequisite: ELE E 541 3 lecs.
Parallel computer systems that are designed to provide a high computation rate for large
specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multicomputers and massively parallel processors are also discussed.

## 〔ELE E 547 Computer Vision

Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 280 and 314) or consent of instructor. Not offered 1994-95.

3 lecs.
Computer acquisition and analysis of image data with emphasis on techniques for robot vision. Computer vision is the construction of explicit meaningful descriptions of physical objects from images. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.]

## ELE E 563 Communication Networks

Fall. 4 credits.
For description, see Communication and Information Systems.

## Circuits, Systems, and Signal Processing

## ELE E 210 Introduction to Electrical

 Systems (also ENGRD 210)Fall, spring. 3 credits.
For description, see Engineering Common Courses.

## ELE E 301 Electrical Signals and Systems I

Fall. 4 credits
For description, see Core Courses.
ELE E 302 Electrical Signals and Systems II
Spring. 4 credits.
For description, see Core Courses.
[ELE E 318 Electric and Electromechanical Circuits and Systems
Spring. 3 credits. Prerequisite: ELE E 315 Not offered 1994-95.

Integrated lecs and lab
Concepts and methods for design, construction, testing, and analysis of a variety of electronic circuits and for modeling and analysis of electromechanical devices such as speakers, solenoids, and a variety of motors.]

## ELE E 320 The Audio Engineering Laboratory: An Introduction To

 Audio Signal ProcessingSpring. 3 credits. Prerequisites: ELE E 301 and ELE E 315 .
Hands-on laboratory experience in applying signals and systems concepts. Students are paired into teams; each team designs, constructs, and tests simple analog and digital audio circuits and programs. The course builds intuition in signal processing, valuable not only for audio, but also for general communication and control systems. In addition, students develop critical technical writing and presentation skills.

ELE E 423 Computer Methods for Circuit Simulation
Fall. 4 credits.
For description see Computer Engineering.

## ELE E 425 Digital Signal Processing

Fall. 4 credits. Prerequisite: ELE E 301. 3 lecs, 1 lab.
Fundamentals of signal analysis, review of Fourier, Laplace, and Z transforms. Sampling theory. Multirate signal processing. Discrete Fourier transform properties and computation (FFT). Digital filter design; the approximation problem for FIR and IIR filters, the realization problem-finite word-length limitations and filter structures.

## ELE E 426 Applications of Signal Processing

Spring. 3 or 4 credits. Prerequisite: ELE E 425.
$1 \mathrm{lec}, 2$ labs.
Applications of signal processing, including signal analysis, filtering, and signal synthesis The course is laboratory oriented and emphasizes individual student projects Design is done with signal-processing hardware and by computer simulation. Topics include filter design (principally digital filtering) and spectral analysis as well as speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

## ELE E 521 Theory of Linear Systems

 Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations3 lecs.
State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems, by T. Kailath.

## ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications

Spring. 4 credits. Prerequisites: ELE E 521 or a solid background in linear algebra and real analysis strongly recommended but not required.
A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle's Theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov redesign, applied nonlinear control, describing functions, averaging and singular perturbations; bifurcation analysis and control and application to physical systems.

## ELE E 525 Adaptive Filtering in

 Communication SystemsFall. 3 credits. Prerequisites: ELE E 425 or 472 , or 521 , or permission of instructor. Fundamentals of an adaptive filter theory intended for communication systems applications. Three traditional problems are used to motivate adaptive FIR and IIR filter design and to raise open issues of current interest: (1) channel equalization for intersymbol interference removal from distorted digital sources, (2) echo cancellation in 4 wire telephony loops, and (3) speechband signal-source compression via differential pulse code modulation.

ELE E 526 Advanced Signal Processing
Spring. 4 credits. Prerequisites: ELE E 425 and ELE E 521.

3 lecs, 1 lab.
Sampling and signal reconstruction. Approximation theory. Linear inversion theory.
Exponential signal modeling. Spectral
estimation. Wavelets.

## ELE E 679 Advanced Topics in Systems and Control

1-3 credits.
For description see Power and Control Systems.

## Communication and Information Systems

ELE E 310 Probability and Random Signals Spring. 4 credits.
For description see Core Courses.

## ELE E 411 Random Signals in Communications and Signal Processing

Fall. 3 credits. Prerequisite: ELE E 302 and 310 or equivalent.

3 lecs.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, widesense stationary processes and power spectral densities, Gaussian random process, including the narrowband case. Electrical engineering phenomena described by such models (e.g., communications channel noise, queues that form in multiple-access telecommunications systems). Response of linear and nonlinear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems (e.g., problems of extraction of signals from noise via Wiener filtering, power spectral density estimation).

## ELE E 445 Computer Networks and

 Telecommunications I
## Fall. 3 credits.

For description see Computer Engineering.

## ELE E 468 Communications Systems I

 Spring. 4 credits. Prerequisite: ELE E 301 or 521 , and 411 or equivalent.Analog signal representation and filtering using Fourier and Hilbert transform techniques. Varieties of amplitude modulation (AM, DSBSC, SSB, VSB, QAM), phase modulation, and phase locked loops. Frequency modulation. Demodulation of AM and FM in the presence of noise; sampling theorems and aliasing. Pulse amplitude modulation. Quantization for $\mathrm{A} / \mathrm{D}$ conversion. Pulse code modulation. Elements of optimal signal parameter estimation. Application to commercial broadcasting and data transmission.

## ELE E 561 Error-Control Codes

Fall. 3 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed.

3 lecs.
An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Methods of shortening and combining codes. Hamming and Singleton bounds for error-correcting codes. Algebra: groups, rings, and fields with special emphasis on Galois or finite field theory. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH)
and Reed-Solomon (RS) codes. Twodimensional cyclic codes and cascaded ReedSolomon codes. Computer methods for the study of the structure and algorithms for errorcontrol are used.

## ELE E 562 Fundamental Information Theory

Fall. 3 credits. Prerequisite: ELE E 310 or equivalent.

3 lecs.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variablelength codes. Channel capacity and ratedistortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.
ELE E 563 Communication Networks
Spring. 4 credits. Prerequisite: ELE E 310 or permission of instructor.

3 lecs.
Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets (LANS and WANS): TDMA, FDMA, ALOHA, slotted ALOHA, Ethernet, reservation, tree, and interval-searched contention resolution protocols. Flow control and capacity assignment algorithms for wideband, robust networks. Adaptive routing and ATM networks.

## ELE E 564 Decision Making and Estimation

Fall. 4 credits. Prerequisite: Coregistration in ELE E 411.
An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, pattern recognition, and statistical signal processing. Topics include Bayes, minimax, and NeymanPearson decision theories; Bayes and maximum likelihood point estimation; CramerRao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

## ELE E 567 Communication Systems II

 Spring. 4 credits. Prerequisites: ELE E 411, 468.Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

## ELE E 577 Artificial Neural Networks

Fall. 3 credits. Prerequisites: ELE E 310; ELE E 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide the primary analytical approach to design and analysis of neural networks. The course will cover capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers, decision-making devices, and
controllers, as well as aspects of recurrent/ feedback/Hopfield nets that can serve as associative memories and combinatorial optimizers. At the level of the current literature.

## [ELE E 664 Foundations of Inference and Decision Making

Spring. 3 credits. Prerequisite: a course in probability and some statistics, or permission of instructor. Not offered 1994-95.

3 lecs.
An examination of methods for characterizing uncertainty and chance phenomena and for transforming information into decisions and optimal systems. Discussion of the foundations of inference includes topics drawn from comparative probability, interval-valued probability, quantitative probability, relative frequency interpretations, computational complexity, randomness, classical probability and invariance, induction, and subjective probability.]

## ELE E 668-669 Random Processes in Electrical Systems

668 , fall; 669 , spring. 3 credits each term. Advanced topics in the general area of randomness and uncertainty and their relevance to the analysis and design of electrical systems.

## Power and Control Systems

## ELE E 318 Electric and

 Electromechanical Circuits and SystemsSpring. 3 credits.
For description see Circuits, Systems, and Signal Processing.

ELE E 451-452 Computer-Aided Analysis of Electric Power Systems I and II
451, fall; 452, spring. 4 credits each term. Prerequisite: ELE E 302.

3 lec-recs, 1 lab-computing session. Representation of 3-phase power systems, modeling of synchronous machines; transmission lines; transformers; loads, introduction to sparce matrix techniques, power-flow analysis, economic dispatch, optimal power flow, symmetrical components, fault studies, powersystem protection, power-system stability, online power-flow analysis, voltage-control systems, and power-control systems.

## ELE E 471 Feedback Control Systems

Fall. 4 credits. Prerequisite: ELE E 302 or M\&AE 326, or permission of instructor.

$$
3 \text { lecs, open lab. }
$$

Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include PID, root-locus, frequency response, and algebraic pole placement. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic process.

## ELE E 472 Digital Control Systems

Spring. 4 credits. Prerequisite: ELE E 471 or permission of instructor.

3 lecs, open lab.
Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms and linear algebra are the major mathematical tools. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control,
observers, combined observer-controller, and algebraic-control design. Assignments will consist of reports on computer-aided controller design and digitally simulated evaluation.

## [ELE E 555 Advanced Power Systems

 Analysis and Control IFall. 3 credits. Prerequisites: ELE E 302 and concurrent registration in 451, or permission of instructor. Not offered 1994-95. Advanced static analysis of power systems. State estimation in power systems. Bad-data detection and identification. Static equivalent circuits of external power systems. Static contingency analysis and selection. Steadystate security assessment. Static bifurcation and voltage stability. Theoretical analysis of load flow equations.]

## ELE E 556 Advanced Power Systems Analysis and Control II

Spring. 3 credits. Prerequisite: ELE E 555 or permission of instructor. Not offered 1994-95 Analysis of power-system components including rotating machines, excitation systems, automatic voltage regulation, boilerturbine control, and speed regulation Automatic Generation Control. Numerical simulations of mid-term and long-term powersystem dynamics. Direct methods for powersystem stability analysis. Dynamic equivalent circuits of external power systems. Dynamic contingency analysis and selection. Dynamic Security Assessment.]

## ELE E 564 Decision Making and

 EstimationFall. 4 credits
For description see Communication and Information Systems.

## [ELE E 573 Optimal Control and

 Estimation for Continuous SystemsFall. 4 credits. Prerequisite: ELE E 521 or permission of instructor. Not offered 1994-95. 3 lecs.
Control system design through parameter optimization, with and without constraints. The minimum principle; linear regulations, minimum-time and minimal-fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.]

## ELE E 574 Estimation and Control in

 Discrete Linear SystemsSpring. 4 credits. Prerequisites: ELE E 521 and 411 , or permission of instructor. 3 lecs.
Optimal control, filtering, and prediction for discrete-time linear systems. Approximation on discrete point sets. The principle of optimality. Kalman filtering. Stochastic optimal control.

## ELE E 664 Foundations of Inference and Decision Making

Spring. 3 credits.
For description see Communication and Information Systems.

ELE E 679 Advanced Topics in Systems and Control
$1-3$ credits. Prerequisite: permission of instructor. Not offered every year. Topics include robotics, nonlinear feedback system stability, multivariable control, and qualitative theory on nonlinear systems.

## Solid-State Electronics

ELE E 306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits.
For description, see Required Courses.
ELE E 412 Applied Solid-State Physics Spring. 4 credits. Prerequisite: ELE E 306. ELE E 407 recommended.

3 lecs, 1 rec.
Review of basic solid-state concepts (lattice, primitive cell, reciprocal lattice, Brillouin zone). Lattice vibrations. The diatomic chain. Polarity of waves. Binding of crystals. Thermal properties of insulators and metals Effective mass tensor. Magnetic flux quantization and the Fermi surface in metals. Plasmons, polaritons, and polarons. Chargecarrier scattering. Optical properties. Kramers-Kronig relations. Elements of superconductivity. Dia- and ferroelectric materials. Dia-, para-, ferro-, and antiferromagnetism.

ELE E 433 Microwave Integrated Circuits Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.

3 lecs, 1 lab.
An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz ). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

## ELE E 453 Integrated Circuit Design

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended.

3 lecs, 1 lab.
Introduction to analysis and design of digital and analog MOS and bipolar integrated circuits (IC). Device models. Computer-aided design (layout, design rules, floor planning). Common building blocks for digital and analog applications (inverters, switches, single-stage units, sources, sinks, differential pairs, active loads). Steady-state and transient analysis, frequency response and noise. Overview of common IC designs (microprocessors, memories, amplifiers).

## ELE E 457 Silicon Semiconductor

 ElectronicsFall. 4 credits with lab. Prerequisites: ELE E 315 and ELE E 306 or equivalent.

3 lecs, 1 lab.
Fundamental electronic properties of semiconductors. Energy-band diagrams, carrier transport and recombination, pn junctions, metal-semiconductor Schottky contacts, ohmic contacts, and metal-oxidesemiconductor (MOS) structures. Operation of bipolar junction transistors (BJTs) and field effect-transistors (FETs). Six two-week labs covering electrical measurements of semiconductor materials and devices.

## ELE E 524 Differential Equation

 Numerical Methods for the Electrical EngineerSpring, 4 credits.
For description, see Computer Engineering.

## ELE E 533 Semiconductor Lasers

Spring. 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. May not be offered 1994-95.

3 lecs.
Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.

## ELE E 535 Semiconductor Physics

Fall. 4 credits. Prerequisites: ELE E 457, 458, and 407 , or permission of instructor.

3 lecs.
Fundamental semiconductor physics of charge carrier transport and optical characteristics of materials and structures useful in electronic and photonic devices. Crystal structure, energy band structures, carrier effective mass, phonons, statistics, classical low-field transport, including temperature effects, highfield and ballistic charge carrier transport, electron scattering by phonons in bulk and quantum well structures, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. Examples of related phenomenon in electronic and photonic devices. On the level of Compound Semiconductor Device Pbysics by S. Tiwari.

## ELE E 536 VLSI Technology

Spring. 4 credits. 3 credits without laboratory with permission of instructor. Prerequisite: ELE E 457 or ELE E 453 or ELE E 539, or permission of instructor. May not be offered 1994-95.

2 lecs, 1 lab.
Processing technology for very large scale integrated circuits for CMOS, BiCMOS, ECL, and related applications. Lithography, oxidation, diffusion, ion implantation, film deposition, wet and dry etching, multilevel metal interconnect, process integration, manufacturing yield, and integrated circuit reliability. Hands-on laboratory includes full MOS device and circuit fabrication process in a clean room; process simulation on CAD tools; and process, device, and circuit characterization

## ELE E 537 Computer System Packaging

 Fall. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ELE E 230 and ELE E 453 or ELE E 457 or ELE E 539; or permission of instructor2 lecs, 1 project
Integration of electronic systems from integrated circuits, to VLSI chips, modules, boards, and full electronic systems including handheld, notebook, desktop, workstation, mainframe, and supercomputer size classes. Packaging architectures, high-speed electrical and optical signal distribution, power distribution, and power and thermal management, functional architecture, manufacturing, measurement and simulation methods, and fundamental limits. Computer simulations and designs on workstations using SPICE3e and AUDiT4.4 CAD tools.

ELE E 539 Custom VLSI Design as Seen by a System Designer
Fall and spring. 6 credits.
For description, see previous listing under Electrical Engineering: Computer Engineering.

ELE E 554 Advanced VLSI Circuit Design Spring. 4 credits. Prerequisite: ELE E 453 or equivalent.

3 lecs, 1 lab.
Integration of building blocks on chip. Overview of recent innovations in VLSI circuits.

Feedback circuits. Operational amplifiers. Switched-capacitor circuits. Digital-to-analog and analog-to-digital converters. Dynamic and static memories. Programmable logic and gate arrays. Systems on chips (microprocessors, wafer-scale integration).

## ELE E 558 Compound Semiconductor Electronics

Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent.

3 lecs, 1 lab.
Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quanlum wells. Advanced semicunductur devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

## ELE E 633 Radiation Effects in

 Microelectronics (also NS\&E 621)Fall. 3 credits. Prerequisites: permission of instructor. A seminar intended for seniors and graduate students in engineering or applied physics.

Two 1-1/2 hour lecs. S. C. McGuire. An introduction to the physical processes that underlie the malfunction of microelectronic circuitry resulting from exposure to ionizing radiation. Basic device-failure mechanisms, including total-dose effects, single-event upsets, and latchup, as well as the roles that circuit testing and modeling methods play in improving circuit design. Impact of surface radiation typical of low-energy electron and photon sources on device fabrication. Reference materials from the current literature.

## ELEE 636 Advanced Solid-State Devices

 Spring. 4 credits. Prerequisites: ELE E 535 or ELE E 457 and ELE E 407 or equivalent. May not be offered academic year 1994-95.2 lecs or seminar sessions, 1 project. Review of quantum foundations of carriers in semiconductors. Detailed discussion of nonequilibrium transport of carriers in semiconductors including carrier dynamics, scattering, relaxation, recombination, hot carrier effects, high field effects, and quantum mechanical tunneling. Exploration of semi-classical drift-and-diffusion, hydrodynamics, and Monte Carlo-based device simulation. Project requires independent simulation study of state-of-the-art semiconductor device.

## Quantum and Opto-Electronics

ELE E 306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits.
For description, see Core Courses.
ELE E 407 Quantum Mechanics and Applications
Fall. 4 credits. Prerequisite: ELE E 306 or equivalent.

3 lecs, 1 rec.
Review of basic quantum mechanical concepts. Harmonic oscillator. Annihilation and creation operators. Application of the WKB approximation to bound states and transmission coefficients. Angular momentum. Raising and lowering operators. Addition of
angular momentum. Radial equation. Effective potential. Hydrogen atom. Selection rules. Spin states. LS coupling. Pauli principle. Hybridization. Helium atom. Perturbation theory. Atom-radiation interaction. Golden rule. Sum rule. Thomas-Fermi atom. LCAO. Bound and anti-bound states. The quantum well. Density of states in the three dimensions. Degeneracy of Landau levels.
ELE E 430 Lasers and Optical Electronics
Fall. 3 credits. Prerequisite: ELE E 306 or equivalent.

3 lecs, 1 rec-lab. An introduction to the operation of stimulatedemission devices such as lasers and devices based on linear and nonlinear optics. Material covered includes diffraction-limited optics, propagation of Gaussian laser beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed as time permits.

## ELE E 524 Differential Equation Numerical Methods for the Electrical Engineer

Spring. 4 credits.
For description, see Computer Engineering.
ELE E 530 Fiber and Integrated Optics Spring. 4 credits with lab. Prerequisite: ELE E 303 or equivalent. 1-credit lab optional.

3 lecs, 1 lab.
Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors. Laboratory includes demonstrations of optical coupling and waveguide characterization.

ELE E 531 Quantum Electronics I
Fall. 4 credits. Prerequisites: ELE E 306 and 407, or Physics 443.

3 lecs, 1 computing session. A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

## ELE E 532 Quantum Electronics II

 Spring. 4 credits. Prereq̧uisite: ELE E 531 or permission of instructor.3 lecs, 1 lec-computing session. A continuation of ELE E 531. Topics include density matrix; nonlinear optical processes; properties of nonlinear optical materials; optical parametric oscillators; spontaneous and stimulated Raman and Brillouin processes; theory of coherence; pico- and femto-second optics; ultrafast processes in semiconductors and molecules; optical properties of semicon-ductor-doped glasses, quantum-well structures, and superlattices.
ELE E 535 Semiconductor Physics
Fall. 4 credits.
For description see Solid-State Electronics.

## Plasmas and Large-Scale Fluids

ELE E 484 Introduction to Controlled Fusion: Principles and Technology (also M\&AE 559 and NS\&E 484)
Spring. 3 credits. Prerequisites: ELE E 301 and 303 , or permission of instructor. Intended for seniors and graduate students.

3 lecs.
For description, see NS\&E 484.

## ELE E 486 Space Science and

 EngineeringSpring. 3 credits. Prerequisites: ELE E 301 and ELE E 303 or equivalent.
A survey of subjects relevant to spacecraft design. Astrodynamics and orbital maneuvers. Rigid-body dynamics and control. Communications. Black-body radiation and temperature control. Geospace environment. Remote sensing using electromagnetic techniques. Applications of these topics will be discussed where appropriate. At the level of Design of Geosyncbronous Spacecraft, by Agrawal.

## ELE E 487 Introduction to Antennas and

 RadarFall. 3 credits. Prerequisites: ELE E 304 (or at least a B in 303).
For description, see Fields, Waves, and Antennas.

ELE E 524 Differential Equation Numerical Methods for the Electrical Engineer
Spring. 4 credits.
For description, see Computer Engineering.
ELE E 580 Applied Electrodynamics
3 credits ( 4 credits with project). Prerequisite: ELE E 581 or ELE E 583 or permission of instructor.
Contemporary electrodynamics with emphasis placed on applications. Theory, design, and use of high-power microwave devices, such as gyrotons, CARMs, free-electron lasers, and traveling-wave tubes. Electromagnetic waveguide and cavity modes, charged-particle orbit theory, particle dynamics in electromagnetic fields, field transforms, electron beam generation, equilibria, waves on beams, lowand high-power microwave devices and their applications. Project based on the numerical simulation of microwave devices.

## ELE E 581 Introduction to Plasma Physics

Fall. 4 credits. Prerequisites: ELE E 303 and ELE E 304 or equivalent. First-year graduatelevel course; open to exceptional seniors with permission of instructor.

3 lecs.
Plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics and controlled fusion.

ELE E 582 Advanced Plasma Physics (also A8EP 607)
Spring. 4 credits. Prerequisites: ELE E 581 and A\&EP 606.

3 lecs.
Boltzmann and Vlasov Equations; dielectric tensor; waves in hot-magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

## ELE E 583 Electrodynamics

Fall. 4 credits
For description, see Fields, Waves, and Antennas.

## [ELE E 585 Atmospheric and Ionospheric Physics (also Astronomy 575)

Fall. 3 credits. Not offered 1994-95. Energy-balance and thermal structure of neutral atmospheres. Elements of circulation theory. Waves and instabilities. Coupling of lower atmospheres to upper atmospheres. Observations of the terrestrial atmosphere and of the other planets. Physical processes in the earth's ionosphere and magnetosphere Production, loss, and transport of charged particles. Electric fields. Coupling of neutralatmosphere dynamics with electric fields and charged-particle transport. Diagnostic techniques, including radar and in situ observations. The equatorial electrojet. Observations of ionospheres on the other planets.]

## [ELE E 586 Solar Terrestrial Physics (also Astronomy 576)

Spring. 3 credits. Not offered 1994-95. High-latiude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.]

## [ELE E 588 Advanced Electromagnetic Wave Propagation and Scattering

Spring. 3 credits. Prerequisites: ELE E 487 and 581 , or permission of instructor. Not offered 1994-95

3 lecs.
For description, see Fields, Waves, and Antennas.]

## ELE E 682 Nonlinear Phenomena in Plasma Physics <br> Fall. 3 credits. Prerequisite: ELE E 582.

 Nonlinear models and behavior of plasmas. Solitons and nonlinear wave equations resonant mode-mode coupling, ponderomotive effects and parametric processes, development of simplified plasma dynamical models.
## [ELE E 685 Solar Plasma Physics

Fall. 3 credits. Offered upon demand. Not offered 1994-95
This course will be coordinated with the two courses on upper atmospheric physics, ELE E 585 and 586, to provide an integrated view of solar-terrestrial physics for the graduate student intending a research career in space plasma physics. A thorough understanding of electromagnetic theory and some knowledge of fluid mechanics and plasma physics at the level of ELE E 581 and 582 are assumed.]

Fields, Waves, and Antennas
ELE E 303-304 Electromagnetic Fields and Waves
303, fall; 304 , spring. 4 credits each semester. For description, see Core Courses.

ELE E 433 Microwave Integrated Circults
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306
For description, see Solid-State Electronics.

ELE E 487 Introduction to Antennas and Radar
Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 304 (or a grade of B or better in ELE E 303).

Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Pulse compression principles and the ambiguity function; synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques, including range-Doppler mapping of planets and the problem of overspread targets.

## ELE E 534 Microwave Semiconductor Devices

Spring. 4 credits. Prerequisites: ELE E 433 and 457.

3 lecs, 1 lab. For description, see SolidState Electronics

## ELE E 583 Electrodynamics

Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 304 or equivalent.

3 lecs.
Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.

## ELE E 584 Microwave Theory

Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent.

3 lecs, 1 rec.
Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.

## [ELE E 588 Advanced Electromagnetic

 Wave Propagation and Scattering Spring. 3 credits. Prerequisite: ELE E 487 and 581 or permission of instructor. Offered alternate years. Not offered 1994-95.3 lecs.
WK band and full-wave solutions of the wave equations, interactions between particles and waves, scattering of radio waves from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.]

## General

ELE E 250 Technology in Western Society (also ENGRG 250)
Fall. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

ELE E 292 The Electrical and Electronic Revolutions (also ENGRG 292)
Spring. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

ELE E 360 Ethical Issues in Engineering Spring. 3 credits. A social science elective for engineering students. Open to juniors and seniors.

3 lecs.
For description, see Engineering Common Courses

ELE E 480 Thermal, Fluid, and Statiatical Physics for Engineers
Spring. 3 credits. Prerequisite: Physics 214. May not be offered 1994-95.
Extensive review of thermodynamic principles. Elementary theory of transport coefficients. Elements of fluid dynamics. Shock waves. Central-limit theorem. Random walk. Electrical noise. Fluctuation-dissipation theorem. Quantum and classical statistics Black-body radiation. Thermal properties of solids. Kramers-Kronig relation. Elementary descriptions of the p-n junction. Shockley equation, superfluidity, superconductivity, and the laser.

## ELE E 491-492 Electrical Engineering

 Project491, fall; 492, spring. 1-8 credits Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required

## ELE E 495-496 Special Topics In Electrical Engineering

1-4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

## ELE E 515-516 Applied Signal

 Processing Systems Design515, fall; 516, spring. Variable credits. Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

## ELE E 517-518 Large-scale, System-

 Design Concepts: A Practical Electric Vehicle Motor Controller517, fall; 518, spring. Variable credits (3-8 per year). Prerequisites: ELE E 471, 472, 476, or 457.

1 lab, 1 rec, 1 group meeting.
Design of a microcontroller-based vectorcontrol system for a 3 -phase induction motor. Emphasis is placed upon the coordinated design of a suitable power electronics switching network, a suitable feedback system with torque control, and a microprocessor arrangement capable of performing the coordinate rotations and implementing the overall feedback algorithm.

## ELE E 591-599 Graduate Topics in

 Electrical Engineering$1-4$ credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

## ELE E 691-692 Electrical Engineering

 Colloquium691, fall; 692, spring. 1 credit each term. For students enrolled in the graduate Field of Electrical Engineering.
Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Report required.

## ELE E 693-694 Master of Engineering Design

693, fall; 694, spring. 1-10 credits. For students enrolled in the M.Eng.(Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate numbers.
ELE E 695-699 Graduate Topics in Electrical Engineering
$1-6$ credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 791-792 Thesis Research
791 , fall; 792 , spring. $1-15$ credits. For students enrolled in the master's or doctoral program.

## GEOLOGICAL SCIENCES

## Freshman and Sophomore Courses

GEOL 101 Introductory Geological Sciences
Fall, spring, or summer. 3 credits.
2 lecs, 1 lab, field trips, evening exams
Fall and spring, R. W. Allmendinger. Observation and understanding the earth, including oceans, continents, coasts, rivers, valleys, and glaciated regions; earthquakes, volcanoes, and mountains; theories of plate tectonics; the origin, discovery, and the development of mineral and water resources. Use of topographic and geologic maps, recognition of minerals and rocks, and field trips to Cascadilla Gorge, Fall Creek, and Enfield Glen.

## GEOL 102 Evolution of the Earth and Life (also Bio S 170)

Spring. 3 credits. GEOL 101 recommended.
2 lecs, 1 lab, field trips, weekly quizzes, no midterm. J. L. Cisne.
Earth systems and their evolution. Earth history's astronomical context. Plate tectonics, continental drifts, and their implications for climate and life. Coevolution of life and the atmosphere. Precedents for ongoing global change. Dinosaurs, mass extinctions, and human ancestry. Laboratories on reconstructing geological history and mapping ancient geography. Fossil collecting on field trips.
GEOL 103 Introductory Geology in the Field
Fall. 3 credits. Limited to 35 students. 1 lec, 1 field trip or lab, 1 rec.
A. L. Bloom.

Subject matter of GEOL 101, taught as much as possible by field trips on campus and in the vicinity, on foot and by bus. Weekly field trips until November introduce most of the major topics of the course, supplemented by lectures, recitations, and labs later in the term.

GEOL 104 The Sea: An Introduction to Oceanography (also Bio S 154)

## Spring. 3 credits

2 lecs, 1 lab. A. L. Bloom, C. Greene. A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: seafloor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution and waste disposal, and marine resources.

## QEOL 105 Writing on Rocks (Freshman

 Seminar)Fall. 3 credits.
J. Chiment

See Freshman Seminar Handbook for description.

## GEOL 108 Frontiers of Gealogy

Spring. 1 credit. May be taken concurrently with or after GEOL 101, 102, 103, 104, 111, 201, 202, or 206.

1 lec. J. L. Cisne and staff. Intended for students who are curious about what lies beyond the introductory courses, what geologists actually do, what the big questions are in current research, and what a geology career might hold in store. A different Comell researcher lectures each week on topics geared to the spring introductory geology courses.

## GEOL 109 Dinosaurs

Fall. 1 credit.
1 lec. J. L. Cisne.
An entry-level survey course for those who are interested in dinosaurs and may lack a science background. Lectures examine the fossil evidence and illustrate how various geological and biological disciplines contribute to understanding dinosaurs and their world.

## [GEOL 111 To Know the Earth

Fall. 3 credits. Not offered 1994-95
2 lecs, 1 lab, and field trips. J. M. Bird Acquaints the non-scientists with the earth Geology as an intellectual challenge, a provider of resources, an environment, a danger, a base for culture, and a science among sciences. Landscapes, mountains, earthquakes, volcanoes, oceans, gold, petroleum, and icecaps. Record of the past, context of the present, forecast for the future.]
GEOL 122 Earthquake! (also ENGRI 122) Fall. 3 credits.

2 lecs, 1 lab. L. D. Brown.
The science of natural hazards and strategic resources is explored in a series of geophysical exercises involving: Earthquakes-an obscure scientist predicts a major earthquake for Los Angeles. Join a disaster task force as it attempts to evaluate the prediction and its social consequences. Oil-participate in a simulated cruise to probe with sound waves for oil deep beneath the Gulf of Mexico. Water-a toxic spill occurs near a housing complex in Ithaca, NY. Use seismic instruments to map the shallow subsurface and identify potential routes of contamination.
GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112.

2 lecs; 1 rec, lab, or field trip. L. Cathles For description, see Engineering Common Courses.

GEOL 202 Environmental Geology
Spring. 3 credits.
2 lecs; 1 rec, lab, or field trip. D. E. Karig Geologic processes that affect or are affected by human society, including stream behavior and floods, earthquakes, land stability and mass-wasting, and volcanic hazards. Applications of geology to engineering, natural resources, and land-use planning. Local examples discussed and visited on short field trips. Best taken as an introduction to geology for students with primary interest in other environmental sciences.

## GEOL 204 Hydrology and the

 Environment (also SCAS 371 and ABEN 371)Spring. 3 credits. Prerequisite: 1 course in calculus.

2 lecs., 1 lab. P. C. Baveye,
J.-Y. Parlange, T. S. Steenhuis,
M. F. Walter.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratories foster an understanding of concepts and principles of hydrologic processes.
GEOL 206 Geologic Perspectives on Global Change
Spring. 3 credits. Prerequisites: GEOL 101,
$102,201,202$, or permission of instructor 3 lecs. K. Attoh. Principles that govern the interactions among the principal components of the climate system (atmosphere, oceans, lithosphere, and solar radiation) are used to reconstruct Earth's climates from the geologic record. Continental climate record in rocks. Geological forcing/ responses to climate change.

## CEOL 210 Introduction to Field Methods in Geological Sciences

Fall. 2 credits. Prerequisite: GEOL 101 or permission of instructor. Weekly field sessions. A weekend field trip.
S. Mahlburg Kay.

The methods by which rocks are used as a geological database. Field methods used in the construction of geologic maps and cross sections; systematic description of stratigraphic sections. Field and laboratory sessions on Saturday mornings until Thanksgiving. One additional lecture during most of these weeks. One weekend field trip to eastern New York.

## GEOL 212 Special January Field Trip

Fall. 1 credit. Prerequisites: GEOL 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced.

1 lec, field trip. Staff. A trip of one week to ten days during January intersession in an area of interesting geology in the lower latitudes. Interested students should contact the instructor during the early part of the fall semester.

GEOL 213 Marine and Coastal Geology Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.
A special one-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (including tuition, room, board, and ferry transportation) is $\$ 600$.

GEOL 214 Western Adirondack Field Course
Spring, one week at the end of the semester. 1 credit. Prerequisite: GEOL 101 or 102 and 210 or equivalent, or permission of instructor. Students should be prepared for overnight camping and share in the cost of camp meals. Independent project.
W. A. Bassett.

Field mapping methods, mineral and rock identification, examination of Precambrian metamorphic rocks and lower Paleozoic sediments, talc and zinc mines.

## Junior, Senior, and Graduate Courses

Of the following, the core courses GEOL 326, $355,356,375$, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering

## OEOL 326 Structural Ceology

Spring. 4 credits. Prerequisite: GEOL 101 or 201, or permission of instructor.

3 lecs, 1 lab, field trips.
R. W. Allmendinger.

Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics includes stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

## GEOL 355 Mineralogy

Fall. 4 credits. Prerequisite: GEOL 101 or 201 and Chem 207 or permission of instructor. 1 lec, 1 lab; assigned problems and readings. S. M. Kay.
Examination of minerals by hand-specimen properties and optical microscopy. Geological setting, classification, crystal structures, phase relations, chemical properties, and physical properties of minerals. X-ray diffraction is introduced. Independent research project.

GEOL 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: GEOL 355.
3 lecs, 1 lab, 1 field trip; assigned
problems and readings. R. W. Kay
Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemistry, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

## GEOL 375 Sedimentology and Stratigraphy

Fall. 4 credits. Recommended: GEOL 102 or 201.

3 lecs, 1 lab, field trips. J. L. Cisne, T. E. Jordan

Formation of sedimentary rocks. Depositional processes and environments. Correlation of strata in relation to time and environment. Petrology of sandstones and limestones. Geological age determination. Reconstruction of paleogeography and interpretation of earth history from stratigraphic evidence. Organization of strata in stratigraphic sequences.
GEOL 388 Geophysics and Geotectonics Spring. 4 credits. Prerequisites: Mathematics 192 and Physics 208, 213, or equivalent.

3 lecs, 1 lab. B. L. Isacks.

Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

## GEOL 410 Field Geology

Summer. 4 credits. Prerequisites: GEOL 210, $214,326,356$, and 375 , or permission of instructor. Four weeks at research sites in the western United States or Canada. Fee, approximately $\$ 1,300$.

Staff.
Field mapping techniques in igneous, metamorphic, and sedimentary rock, using topographic maps and air photos. The structural geology, petrology, geomorphology, and sedimentology of selected areas in the Rocky Mountains will be included. An independent project and report is done during the last week.

## GEOL 411 Global Change Research: Mountains, Climate, and Erosion

 Fall. 3 credits.1 lec, 2 labs. B. L. Isacks.
Undergraduate participation in one of the interdisciplinary research projects of the Earth Observing System (EOS). Choice of topics concerning the interplay of climate, topography, and the environment of the Andes and Himalayan mountains as revealed by satellite images and other computerized data analyzed with modern image processing and Geographic Information Systems (GIS).

## [GEOL 423 Petroleum Geology

Fall. 3 credits. Recommended: GEOL 326. Offered alternate years. Not offered 1994-95.

2 lecs, 1 lab. W. B. Travers.
Introduction to hydrocarbon exploration and development. Exploration techniques, including well logs, fluid pressures, seismicreflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Dispersal systems and depositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling and production. Estimates of petroleum reserves, including tar sands and oil shales.]
GEOL 425 Precambrian Orogenic Cycles Fall. 3 credits. Prerequisites: GEOL 326, GEOL 356, or permission of instructor.

2 lecs, $1 \mathrm{lab} /$ discussion. K. Attoh. Thermal and kinematic histories of Precambrian orogenic belts. Recent data from metamorphic, structural, and geochronological studies to infer deformation paths in selected orogens, including Dahomeyide and Eburnian orogens of West Africa, and Grenville, Penokean, and Kenoran orogens of the Canadian Shield. Current hypotheses regarding Precambrian orogenic styles and continental crust evolution.

## [GEOL 426 Geologic Evolution of South

 AmericaSpring. 3 credits. Prerequisites: GEOL 326 and GEOL 356, or permission of instructor. Not offered 1994-95.

2 lecs, 1 lab. S. Mahlburg Kay. Regional overview of Paleozoic to recent tectonic and magmatic evolution of South America in the framework of crustal and mantle evolution, with particular emphasis on the evolution of the region of the modern Andean Cordillera.]

GEOL 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor.

1 lec, 1 lab. L. D. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues, using seismic, gravity, and magnetic techniques. Lectures and laboratory sessions during the semester introduce geophysical principles, data-reduction techniques, interpretation, and environmental applications. Summary report required.

## GEOL 438 Exploration Seismology I: Data Acquisition and Processing

Fall. 3 credits. Prerequisite or corequisite: GEOL 437 or equivalent. Offered alternate years.

3 lecs. L. D. Brown.
Planning seismic reflection and refraction surveys. Array design. Source characteristics and ground coupling. Land and marine operations. 2-D and 3-D surveys. Convolutional seismic model. Applied seismic processing: FK filtering, deconvolution, velocity analysis, stacking, migration, display. True amplitude processing.
[GEOL 439 Exploration Seismology II: Analysis and Interpretation
Spring. 3 credits. Prerequisite: GEOL 437 or equivalent. Offered alternate years. Not offered 1994-95.

3 lecs. L. D. Brown.
Techniques for inferring geologic structure and lithology from multichannel seismic reflection data and crustal refraction data. Migration. Velocity and amplitude interpretation, correlation criteria, resolution wave-form analysis, seismic structure, and stratigraphy. Seismic modeling. 3-D and VSP. Attribute and tau-p analysis.]

## GEOL 441 Geomorphology

Fall. 3 credits. Prerequisite: GEOL 102 or 201, or permission of instructor.

2 lecs, 1 lab. A. L. Bloom.
Systematic analysis of landforms constructed by tectonic and volcanic processes and their subsequent progressive destruction by climate-controlled erosional processes.

## GEOL 442 Glacial and Quaternary

 GeologySpring. 3 credits. Prerequisite: GEOL 441 or permission of instructor.

2 lecs, 1 lab; several field trips.
A. L. Bloom.

Glacial processes and deposits and the chronology of the Quaternary Period.

## GEOL 445 Geohydrology (also ABEN 471

 and C\&EE 431)Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202.

2 lecs, 1 disc, lecture, or field trip.
W. Brutsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.

Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.
GEOL 452 X-ray Diffraction Techniques Spring. 3 credits. Prerequisites: GEOL 355 or permission of instructor. Offered alternate years.

2 lecs, 1 lab. W. A. Bassett and staff. Automated X-ray diffractometer, DebyeScherrer, real-time Laue, high-temperature diffraction, high-pressure diffraction, and pole-
figure analysis. Applications in materials science and geological sciences. Labs will be held in the new Materials Science X-Ray Facility.
GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years

2-1/2 lecs, $1 / 2$ lab. R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Major and trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

## [GEOL 454 Advanced Mineralogy

Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1994-95.

2 lecs, 1 lab. W. A. Bassett. Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding of Earth's interior.]

## [GEOL 455 Geochemistry

Fall. 4 credits. Prerequisites: Chemistry 207 or equivalent, Mathematics 192. Recommended: GEOL 356. Offered alternate years. Not offered 1994-95.

3 lecs, 1 disc. W. M. White.
The Earth from a chemical perspective. Formation of the elements; cosmorchemistry; chemical evidence regarding the formation of the Earth and Solar System; trace-element geochemistry; isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of the oceans; hydrothermal systems and ore deposition.]

## GEOL 458 Volcanology

Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered altemate years.

2 lecs., $1 \mathrm{lab} / \mathrm{rec}$, possible spring-break
field trip to volcanic area such as Hawaii. R. W. Kay.

Causes of volcanism, melting in the Farth and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, eruption mechanisms. Volcanic plumbing systems, magma chamber processes, evolution of magma. Volcanism and impact phenomena in the Solar System. Volcanic hazard assessment and volcano monitoring. Ore deposits associated with volcanism.

## [GEOL 476 Sedimentary Basins:

Tectonics and Mechanics
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1994-95.

3 lecs. T. E. Jordan.
Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Interactions of subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.]

## OEOL 478 Advanced Stratigraphy

Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years.

2 lecs, 1 lab. T. E. Jordan.
Modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record and numerical modeling.

## [CEOL 479 Paleobiology (also Bio Sci 479)

Fall. 3 credits. Prerequisites: Biological Sciences 101-102 and 103-104 or equivalent, and either GEOL 375, Biological Sciences 272 or 274 , Biological Sciences 373 , or permission of instructor. Offered alternate years. Nor offered 1994-95.

3 lecs. J. L. Cisne and staff.
The major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record.)

## [GEOL 481 Senior Survey of Earth Systems

Fall. 3 credits. Limited to seniors majoring in geological sciences. Not offered 1994-95.

1 lec, 1 disc. J. M. Bird.
Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change; mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions; student presentations.]
GEOL 490 Honors Thesis (B.A. degree candidates)
Fall, spring. 2 credits.
Staff.
Thesis proposal to be discussed with director of undergraduate studies during the junior year. Participation requires acceptance of a thesis proposal by the faculty committee.

## GEOL 491-492 Undergraduate Research

Fall, spring. 1 or 2 credits.
Staff (D. E. Karig and A. L. Bloom,
coordinators).
Introduction to the techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

## GEOL 500 Design Project in Geohydrology

Fall, spring 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.
L. M. Cathles.

The project may address one of many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented in GS 501, Geohydrology Design Project Seminar.

## GEOL 501 Geohydrology Design Project

 SeminarFall or spring. 1 credit. Required for the M.Eng. degree, geohydrology option. 1 rec., hours to be arranged. L. M. Cathles. Seminar is normally in the spring and provides a forum for discussion of courses and development of design projects (see GS 500), and an opportunity to present and discuss design projects.

## GEOL 502 Case Histories in

 Oroundwater AnalysisSpring. 4 credits.
L. M. Cathles.

Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes part of a final report.
Results are presented in a half-day seminar at end of term.

## [GEOL 621 Marine Tectonics

Fall. 3 credits. Prerequisites: GEOL 326 and a course in geophysics. Offered alternate years. Not offered 1994-95.

3 lecs. D. E. Karig.
Study of geophysical and geological characteristics of the earth's crust beneath the oceans. Emphasis on recent geologic data concerning plate margins in the oceans; island-arc systems, spreading systems, and transforms. Techniques for determining instantaneous and finite plate rotations. Lectures and reviews of recent papers. Term project and paper required.]

## [GEOL 622 Advanced Structural

 Geology ISpring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. Not offered 1994-95.

2 lecs, 1 lab, possible weekend field trips.
D. E. Karig, R. W. Allmendinger.

Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructure, preferred orientation, and TEM analysis; pressure solution and cleavage development; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.]

## [CEOL 624 Advanced Structural

 Geology IISpring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered altemate years. Not offered 1994-95.

2 lecs, 1 lab, spring-recess trip.
R. W. Allmendinger, D. E. Karig. Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, rift provinces, or strike-slip provinces. Techniques of balanced cross sections.]
[GEOL 625 Tectonic Mistory of Western North America from Craton to Terranes
Fall. 2 credits. Open to seniors and graduate students. Offered alternate years. Not offered 1994-95.

Lecture, term paper, quizzes, no final.
W. B. Travers.

Seminar on current research on the sequence, style, and mechanics of deformation, with emphasis on growth of the continent in the western United States and southern Canada.]
[GEOL 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95.

T R 10:10-12:05. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement GEOL 681.]

GEOL 635 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Fall. 3 credits. Prerequisite: GEOL 388 or permission of instructor.

3 lecs. D. L. Turcotte.
Definitions of fractal sets and statistical fractals, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods and droughts. Definitions of chaos and selforganized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the earth's dynamo, and distributed seismicity.
GEOL 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor.

3 lecs. D. L. Turcotte.
Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.
[GEOL 655 Isotope Geochemistry
Fall. 3 credits. Open to undergraduates.
Prerequisite: GEOL 356 or permission of instructor. Offered alternate years. Not offered 1994-95.

3 lecs. W. M. White.
Nucleosynthetic processes and the isotopic abundances of the elements. Geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, $\mathrm{Sm}-\mathrm{Nd}$, K-Ar, U-series isotopes, and cosmogenic isotopes such as ${ }^{14} \mathrm{C}$ and ${ }^{36} \mathrm{Cl}$. Use of radiogenic and stable isotopes in petrology and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the Solar System. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.]

## [GEOL 681 Geotectonics

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95

2 lecs. J. M. Bird
Theories of orogeny; ocean and continent evolution. Kinematics of lithosphere plates Rock-time assemblages of modern oceans and continental margins, and analogs in ancient orogenic belts. Time-space reconstructions of specific regions. Problems of dynamic mechanisms-corollaries and evidence from crustal features.]
CEOL 695 Computer Methods in Geological Sciences
Fall. 3 credits
L. D. Brown, B. L. Isacks

To familiarize students with the growing importance of computers in geological and
geophysical research. Develop, debug, implement, and document a program relevant to current research. Facilities include the department's VAX workstations, MEGASEIS seismic computer, Landmark Interpretation Workstation, IIS image processor, and numerous graphics and I/O peripherals. The Cornell National Supercomputer Facility may also be used.

## GEOL 700-799 Seminars and Special

 WorkFall, spring. 1-3 credits. Prerequisite:
permission of instructor.
Advanced work on original investigations in geological sciences. Topics change from term to term.

GEOL 722 Advanced Topics in Structural Geology
R. W. Allmendinger.

GEOL 725 Rock and Sediment Deformation
D. E. Karig
[GEOL 731 Plate Tectonics and Geology Not offered 1994-95. J. M. Bird.]

## [GEOL 733 Fractal Chaos

Not offered 1994-95. D. L. Turcotte.]

GEOL 741 Advanced Geomorphology Topics
A. L. Bloom.

GEOL 751 Petrology and Geochemistry S. Mahlburg Kay.

GEOL 753 Advanced Topics in Mineral Physics W. A. Bassett.
[GEOL 755 Advanced Topics in Petrology and Tectonics
Not offered 1994-95.
J. M. Bird, W. A. Bassett.]

GEOL 757 Current Research in Petrology R. W. Kay, S. Mahlburg Kay.
[GEOL 762 Advanced Topics in Petroleum Exploration
Not offered 1994-95. W. B. Travers.]

GEOL 771 Advanced Topics in Sedimentology and Stratigraphy T. E. Jordan.

GEOL 773 Paleobiology J. L. Gisne.

GEOL 780 Seismic Record Reading M. Barazangi.

GEOL 781 Geophysics, Exploration Seismology L. D. Brown.

GEOL 783 Advanced Topics in Geophysics B. L. Isacks.

GEOL 789 Seismic-reflection Profiling L. D. Brown.

GEOL 793 Andes-Himalaya Seminar R. W. Allmendinger, A. L. Bloom, B. L. Isacks, T. E. Jordan, S. Mahlburg Kay
[GEOL 796 Geochemistry of the Solid Earth
Fall. Not offered 1994-95. W. M. White.]

GEOL 797 Fluid-Rock Interactions L. M. Cathles.

GEOL 799 Contemporary Issues in Groundwater Hydrology
Spring
L. M. Cathles.

## MATERIALS SCIENCE AND ENGINEERING

## Undergraduate Courses

MS\&E 111 Elements of Materials Science and Engineering (also ENGRI 111)
Fall. 3 credits. 3 lecs.
Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products like a disposable camera, portable cassette player, or CD player. Emphasis is placed on materials identification and their selection to perform an engineering function.
MS\&E 118 Design Integration: A Portable CD Player (also ENGRI 118)
Spring. 3 credits.
3 lecs. M. Thompson
For description, see Engineering Common Courses.

## MSeE 261 Introduction to Mechanical

 Properties of Materials (also ENGRD 261)Fall, spring. 3 credits. Prerequisite:
coregistration in Physics 213 or electricity and magnetism in high school physics.

2 lecs, 1 rec or lab.
For description, see Engineering Common Courses.

MS\&E 262 Introduction to Electrical Properties of Materials (also ENGRD 262)

Spring. 3 credits. Prerequisite: co-registration in Physics 213 or electricity and magnetism in high school physics.

2 lecs, 1 rec or lab.
For description, see Engineering Common Courses.
MS\&E 285 Art, Archaeology, and Analysis (also ENGRI 185 and NS\&E 285))

Spring. 3 credits.
3 lecs.
For description, see Engineering Common Courses.
MS\&E 331/531 Structure of Materials
Fall. 4 credits.
3 lecs, 1 lab
Crystal structures and crystal defects,
stereographic projection methods. Techniques for materials analysis: X-ray and electron diffraction, optical and electron microscopy. Design of experimental systems for the structural characterization of materials

MS\&E 332/532 Electrical and Magnetic Properties of Materials
Spring. 3 credits. Prerequisite: MS\&E 331 or permission of instructor.

3 lecs.
Introduction to electronic band structure of crystals. Electrical and magnetic properties of
metals and semiconductors as affected by microstructure. Design of semiconductor properties by doping. Carrier drift, diffusion, and recombination. Properties of heterojunctions in semiconductor devices. Principles and design of ferromagnetic materials for transformers, permanent magnets, and magnetic memory devices. Fundamentals of superconducting materials for high-field magnets and Josephson junctions. Introduction to dielectic and optical properties.

## MS\&E 333 Research Involvement I

Fall. 3 credits. Prerequisite: approval of course coordinator
Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized.

## MS\&E 334 Research Involvement II

 Spring. 3 credits. Prerequisite: approval of department.May be a continuation of MS\&E 333 or a oneterm affiliation with a research group.

## MS8 E 335/535 Thermodynamics of Condensed Systems <br> Fall. 4 credits. Prerequisite: Math 293 and 294.

3 lecs
The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. Statistical mechanics is introduced and applied to the calculation of entropy and specific heat of ideal gases and solids. Onethird of the course involves examples of design and control of processes.

## MSaE 336/536 Kinetics, Diffusion, and

 Phase TransformationsSpring. 3 credits. Prerequisite: MS\&E 335 or permission of instructor.

3 lecs.
Introduction of absolute rate theory, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, oxidation and corrosion, radiation damage, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-third of the course involves examples of design and control of processes

## MSAE 345 Materials and Manufacturing

 Processes (also M\&AE 312)Spring. 3 credits. Prerequisite: T\&AM 202 or permission of instructor

2 lecs, 1 lab.
For description see M\&AE 312.

## MS\&E 414/514 Chemical Processing of Ceramics

Spring. 3 credits. No prerequisites. Design and characterization of materials at the molecular level. Synthesis, drying, and sintering of ceramics, glasses, and composites. Sol-gel, hydrothermal, chemical-vapor deposition, and pyrolysis techniques. Surface chemistry of oxides. Analytical techniques include chromatography, mass spectrometry, infrared, uv-visible and nuclear-magnetic resonance spectroscopy. Design, synthesis, and chemical properties of inorganic/ organometallic precursors. Ceramic thin films, fibers whiskers, and membranes.

## MS\&E 435 Senior Thesis I \& II

 435 , fall and spring. 2 -semester course 8 credits.Staff.
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required.

## MS\&E 441/541 Microprocessing of

 Materials
## Fall. 3 credits.

3 lecs, occasional lab
Materials and processing steps involved in the production of integrated circuits and other micro-devices. Science, engineering, and design of processes to produce a specific device, such as a DRAM or CMOS inverter (not detailed electrical-circuit analysis of these devices or system design). Emphasis is on silicon, with extensions to gallium arsenide All fabrication steps are considered, from single crystal growth and wafer production, to characterization, testing and yield calculations. Major topics are thermal oxidation of silicon, chemical vapor deposition of thin films, diffusion, ion implantation, resists and the principles of lithography using UV, electrons and X-rays, and wet/dry etching

## MS\&E 442/542 Macroprocessing (also MeAE 512)

Spring. 3 credits.
3 lecs.
Deformation processing of materials, including superplastic forming, sheet-metal forming massive forming, and powder processing. Time, temperature, and strain-rate effects in warm-forming and hot-forming. Characterization of powder-compaction mechanisms and their use in process design. Forming-limit diagrams. Development of microstructurebased criteria for fracture in large deformations. Optimization and design of forming processes. Development of constitutive equations for superplastic flow. Design of a superplastic forming process starting from basic mechanisms. The course includes a comprehensive experimental project in which the constitutive equations for superplastic flow are measured and computer-aided techniques are used to design a superplastic forming process. The forming experiment is carried out, and the results are compared with the predictions from the numerical analysis.

## MS\&E 443-444 Senior Materials

 Laboratory443 , fall; 444 , spring. 3 credits Practical laboratory experience covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, and electron microscopy

## MS\&E 445 Mechanical Properties of

 MaterialsFall. 3 credits. Prerequisites: MS\&E 331 and 336 , or permission of instructor. 3 lecs.
Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers,
and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

## MS8E 447 Materials Design Concepts

 I 8I, fall; II, spring. 4 credits
Defines design in the field of materials science using Dieter's Engineering Design, Ashby's Materials Selection in Engineering Design, and other sources. Innovation, patent searching, and ASTMS standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design-study project in the fall semester Completion of extensive design-study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.
[MS\&E 449 Introduction to Ceramics Fall. 3 credits. Prerequisite: MS\&E 331 or permission of instructor. Not offered 1994-95 3 lecs.
Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.]

## [MS\&E 450 Physical Metallurgy

Spring. 3 credits. Not offered 1994-95 The service and design requirements of engineering alloys and their testing and characterization. The properties of important alloy systems. The selection and design of alloys for various engineering requirements, such as ASME design codes.)

MS\&E 452 Properties of Solid Polymers Spring. 3 credits. Prerequisite: Engr 261 or permission of instructor.

3 lecs.
Synthetic and natural polymers for engineering applications. Production and characterization of long-chain molecules. Gelation and networks, rubber elasticity, elastomers and thermosetting resins. Amorphous and crystalline thermoplastics and their structure. Time- and temperature-dependent elastic properties of polymers. Molecular-weight measurement. Design of high-impact-strength polymers.

## [MS\&E 454 Processing of Olass, Ceramic, and Glass-Ceramic Materials

Spring. 3 credits. Offered alternate years. Not offered 1994-95.
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for highpurity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics
will be discussed. This course is team taught with scientists from the research and development laboratory of Corning Glass Works.]

MS\&E 455 Analysis of Manufacturing Processes (also M\&AE 512)
Spring. 3 credits. Prerequisite: M\&AE 312. 3 recs.
For description, see M\&AE 512.

## MS\&E 459 Physics of Modern Materials

 AnalysisSpring. 3 credits
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis techniques such as Auger electron spectroscopy, ion scattering, and secondary ion-mass spectroscopy. Design of experiments for near-surface analysis.

## MS\&E 463 Principles of Electronic

 PackagingSpring. 3 credits.
Design, materials, and manufacturing needs for packaging technology, from chip to board Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

## Graduate-Level Professional Courses

MsaE 510 Optical Methods and Materials
Spring. 3 credits.
Principles of geometric and Gaussian optics, instrumentation required for optical experiments, and methods in optical spectroscopy. Fundamental aspects of the interaction between optical waves and crystalline solids Materials aspects of optical devices such as optical films and coatings, light-modulation devices, displays, lasers and detectors, optical waveguides, electro-optic devices, optical recording, and applications of high-intensity light beams.

MS8E 516 Thin-Film Materials Science Fall. 3 credits.
This course is a fundamental approach to thinfilm science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented

## MSaE 518 Introduction to Electron Microscopy

Fall. 3 credits. Prerequisite: MS\&E 331 or permission of instructor

3 lecs.
Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam diffraction contrast. Analytical microscopy; comparison of EDS, WDS, and EELS.

Overview of specimen preparation and in-situ microscopy.

MS\&E 520 Practical Electron Microscopy
Fall. 3 credits. Corequisite: MS\&E 518-520. Limited to 12 students. A fee will be charged for instrument usage.

Lab.
Students will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the instrument to presentation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis
MS\&E 553-554 Special Project
553, fall; 554 , spring. 6 credits each term. Research on a specific problem in the materials area.

## Graduate Core Courses

MS\&E 601 Thermodynamics of Materials Fall. 3 credits. Prerequisite: previous course in thermodynamics at level of MS\&E 335. Basic statistical thermodynamics. Partition function and thermodynamic state functions. Distributions. Laws of thermodynamics. Freeenergy functions and conditions of equilibrium. Chemical reactions. Statistics of electrons in crystals. Heat capacity. Heterogeneous systems and phase transitions. Lattice models of 1-, 2-, 3-dimensional interacting systems. Statistical thermodynamics of alloys. Free-energy and phase diagrams. Order-disorder phenomena. Point defects in crystals. Statistical thermodynamics of interfaces.

## MS\&E 602 Elasticity, Plastic Flow, and Fractures

Fall. 3 credits.
Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials

## MS\&E 603 Analytical Techniques for

 Materials ScienceSpring. 4 credits.
Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

## MS\&E 604 Diffusion and Phase Transformation: Kinetics in Condensed Matter

Spring. 3 credits.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in solids, metallic and ionic. Phase stability and transformation; nucleation and growth, spinodal decomposition and
displacive transformations. Phase coarsening processes, recrystallization and grain growth. Diffusion-controlled growth, interfacial reactions, moving-boundary problems. Grainboundary migration controlled kinetics. At the level of Diffusion in the Condensed State, by Kirkaldy and Young

## MS\&E 605 Structure and Chemistry of Condensed Matter <br> Spring. 3 credits.

This course focuses on the link between the local chemistry of the elements comprising a solid, the structure of the solid, and the bonding in the solid. Elementary aspects of group theory and representation theory; introductory quantum mechanics including Schrödinger equation for approaches to bonding in extended systems; hydrogen atom and diatomic molecules; band structures and densities of states of simple crystals. Crystal structures. Structure of and bonding in surfaces, amorphous materials, glasses, liquids, interfaces as well as case studies.

Related Course In Another Department
Introductory Solid-State Physics (Physics 454)

## Further Graduate Courses

MS\&E 610 Principles of Diffraction (also A\&EP 711)
Spring. 4 credits. Offered alternate years. For description, see A\&EP 711.
MS\&E 611 Modern Polymer Physics Spring. 3 credits. Prerequisites: MS\&E 452, ChemE 711, or equivalent. Offered alternate years. Not offered 1995-96
Modern engineering plastics and polymeric matrices for fiber-reinforced composite materials often demand more detailed knowledge of polymer structure and properties in the melt or solid state than is afforded by beginning courses that emphasize polymer solutions. This course is a fundamental approach to the structure and physical properties of polymers, copolymers, and polymer mixtures, including thermodynamics, phase equilibria, diffusion, kinetics of phase separation, surfaces, and interfaces. At the level of Scaling Concepts in Polymer Physics by de Gennes.

## MS\&E 612 Solid-State Reactions

Fall. 3 credits. Offered in spring alternate years after 1994-95 to begin Spring 1996. Point defects (thermal disorder, component activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws), pointdefect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), demixing of materials in potential gradients, selected solid-state processes (internal reactions, solid-state galvanic cells, etc.).

## MseE 614 Advanced Transmission Electron Microscopy

Fall, spring. 3 credits. Prerequisite: MS\&E 518 or permission of instructor. Offered on demand.
Kinematic and dynamic diffraction, dispersion surfaces, and Bloch waves. Anomalous absorption, Kikuchi band theory, and energyselected images. Contrast-transfer-function theory of phase contrast. Lattice imaging and image modeling. Calculation of multibeam defect images in theory and practice. Weakbeam images. Image processing. Highresolution SEM and STEM images. Convergent beam techniques. Plus selected current topics.

## MS\&E 615 Advanced Mechanical

 PropertiosFall or spring. 3 credits. Offered on demand. Advanced experimental and theoretical aspects of the deformation and failure of structural materials. Although the emphasis is on metals and alloys, attention is also given to glasses, ceramics, semiconductors, and polymeric materials. Topics include theory and practice of mechanical testing, deforma tion behavior of polycrystal, single-crystal metals and covalently bonded semiconductors, phenomenological theories of deformation, the mechanical equation of states for metals, application to the thermal fatigue problem, micromechanical theories of plastic flow in metals, creep in metals, and the timedependent deformation of polymers, relationship of microstructure to mechanical properties of metals and polymers, ductile fracture of metals, brittle fracture of metals and ceramics.

## MS\&E 616 Electronic and Magnetic Materials

Fall or spring. 3 credits. Offered on demand. Electronic transport properties of metals and semiconductors. Semiconductor devices. Optical and dielectric properties of insulators and semiconductors. Laser materials. Structural aspects of superconducting materials, ferromagnetism, and magnetic materials. Magnetic memory devices. At the level of Physics of Semiconductor Devices, by Sze; Ferromagnetism, by Bozworth; and current review articles.

MS8E 617 Solid State Electrochemistry Spring. Alternating years. (Begins in 1994-95; alternates with MS\&E 612.) 3 credits. Prerequisite: MS\&E 612 or permission of instructor.
Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickert.

MS\&E 618 Laser Processing of Materlals Fall or spring. 3 credits. Offered on demand. Use of high-intensity lasers in the processing of materials to achieve unique microstructures and metastable phases. Topics: fundamentals of the interaction of E\&M fields with metals, semiconductors and ceramics, transfer of energy between electronic and phonon systems, kinetics of rapid solidification, metastable phase transformations, microstructure of rapidly solidified materials, and current industrial applications.

MS\&E 524/624 Synthesis of Polymeric Materials
Spring. Alternating years. 3 credits. Prerequisite: MS\&E 452 or permission of instructor. Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Topics will also include liquid crystalline polymers, polymers for photoresists, and electronic packaging. At the level of Principles of Polymerization, by Odian.

## Specialty Courses

## MseE 707 Solar Energy Materials

3 credits. Offered on demand (fall or spring). 3 lecs.
Photovoltaic energy conversion: (1) theory (on the level of Hovel); (2) the role of crystal defects and grain boundaries on the conversion efficiency, and schemes to passivate these defects; (3) current investigations in the DOE program to produce large quantities of solar-grade semiconducting Si; (4) theory and materials for amorphous silicon solar cells.

## MS8E 716 Transition Metal Oxides (also Chem 716)

Fall. 3 credits. Offered on demand.
For description see Chem 716.

## MS8E 779 Special Studies in Materials Sciences

Fall, spring. Variable credit. Offered on demand.
Supervised studies of special topics in materials science.

## MSeE 798 Materials Science and Engineering Colloquium

Fall, spring. 1 credit each term. Credit limited to graduate students.
Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

## Ms\&E 799 Materials Science Research

 SeminarsFall, spring. 2 credits each term. For graduate students involved in research projects. Short presentations on research in progress by students and staff.

## MS\&E 800/801 Research in Materials

 Science800, fall; 801, spring. Credit to be arranged. Independent research in materials science under the guidance of a member of the staff.

## MECHANICAL AND AEROSPACE ENGINEERING

## General and Required Courses

M\&AE 101 Naval Ship Systems (also Naval Science 102)
Spring. 3 credits. Limited to freshmen and sophomores.
An introduction to primary ship systems and their interrelation. Basic principles of ship construction. Stability, propulsion, control,
internal communications, and other marine systems.

## M\&AE 102 Drawing and Engineering Design (also ENGRG 102)

Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.

2 lecs, 1 lab.
For description, see Engineering Common Courses.

## MeAE 117 Introduction to Mechanical Engineering (also ENGRI 117) <br> Fall. 3 credits.

2 lecs, 1 lab.
For description, see Engineering Common Courses.
M\&AE 212 Mechanical Properties and Processing of Engineering Materials Spring. 4 credits. Prerequisite: ENGRD 202

3 lecs, 1 lab; evening exams and prelims
may be given. N. Zabaras, M. Miller.
Introduction to the broad range of mechanical behavior of materials and their processing. The mechanical properties of metals, ceramics, and composite materials are covered together with their microstructural features and processing. Ideal work methods are introduced for the analysis of bulk deformation processes. Heat treatment of metals and alloys, phase diagrams, casting and quenching processes.

## M\&AE 221 Thermodynamics (also ENGRD 221]

Fall, spring, may be offered summer. 3 credits. Prerequisites: Mathematics 192 and Physics 112
For description, see Engineering Common Courses

## M\&AE 225 Mechanical Design and

 SynthesisSpring. 3 credits. Prerequisite: ENGRD 202. 3 lecs, 1 lab. Lab fee $\$ 50$.
A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.

MeaE 323 Introductory Fluid Mechanics Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203 and coregistration in 221, or permission of instructor.

4 lecs, evening prelims. Z. Warhaft. Statics, kinematics, potential flow, dynamics, momentum, and energy relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena, laminar and turbulent motion, boundary layer; lift and drag; supersonic flow and shock waves.

## M\&AE 324 Heat Transfer

Spring; may be offered in Engineering
Cooperative Program. 3 credits. Prerequisite: M\&AE 323 or permission of instructor.

3 lecs, evening prelims, evening problem sessions. K. E. Torrance. Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces. Introduction to boiling and phase change.

## MeAE 325 Mechanical Design and

 AnalysisFall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203.

3 lecs, 1 lab. Evening prelims may be given. D. L. Bartel.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M\&AE 326 System Dynamics
Spring; may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: Mathematics 294, Engr 203. Junior standing required.

3 lecs, 1 lab, evening prelims. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems, stability analysis. Computer simulation and experimental studies of vibration and control systems.

## MAAE 427 Fluids/Heat Transfer Laboratory

Fall. 3 credits. Prerequisites: M\&AE 323, 324. Fulfills the writing requirement.

1 lec, 1 lab. E. Fisher, C. H. K. Williamson. Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and heat transfer. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, twophase flows and engine performance. Biweekly written assignments.

## M\&AE 428 Engineering Design

Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent.

2 lecs.
A comprehensive look at principles of design with a focus on case studies. Examples taken from fluid, thermal, and energy areas, as well as mechanical systems and the manufacturing area of mechanical engineering. Special emphasis on the design sources of engineering failures in products, machines, and mechanical systems, as well as how design should relate to a successful manufactured product.

## Mechanical Systems, Design, Materials Processing, and Precision Engineering

M\&AE 386 Automotive Engineering
Spring. 3 credits. Prerequisite; M\&AE 325 or permission of instructor.

3 lecs. J. Lumley.
Selected topics in the analysis and design of vehicle components and vehicle systems Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered

## M\&AE 389 Computer-Aided Design

Fall. 3 credits. Limited to juniors and seniors Prerequisite: A course in programming. May be taken either before or in conjunction with a numerical-methods course. Fulfills
computer applications requirement.
D. L. Taylor.

A first course in CAD, introducing the use of software and computer methods in mechanical engineering. Topics include simulation, optimization, solution of field equations (finite elements, finite differences), least-square function approximation, geometry (space
curves, splines, patches), computer graphics, and data visualization

## M\&AE 412 Metal Forming, Machining and Solidification Processes

Fall. 4 credits. Prerequisite: M\&AE 212 or M\&AE 261.
P. Dawson

Analysis and design of extrusion, drawing, forging and rolling processes using slab analysis techniques. Sheet forming and anisotropy. Machining processes. The mechanics of chip formation. Cutting forces and stresses, shear angle theories, velocity diagrams, heat generation and optimum selection of cutting process parameters. Basic solidification processes. Solution of heat conduction/solute diffusion driven solidification problems for metals and alloys.

## M\&AE 414 Introduction to Precision

 EngineeringSpring. 3 credits or 4 with laboratory. Prerequisites: ENGRG 102 and M\&AE 212, or 412, or permission of instructor.

3 lecs, 1 lab (optional). H. B. Voelcker. Variability in mechanical products arises primarily from the processes used to make and assemble parts; it must be accommodated in design and controlled in manufacturing. This course addresses form variability through studies of ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Central principles, practices, and limitations are summarized.
[M\&AE 417 Introduction to Robotics Spring. 3 credits. Enrollment limited. Not offered 1994-95.
Coordinate transformations for manipulator kinematics. Newton-Euler and Lagrangian developments of manipulator dynamics. Robot control schemes. Trajectory generation Motion planning. Robot programming.]

## [M\&AE 425 Design: Beyond the

 ImaginaryFall. 4 credits. Prerequisite: M\&AE 325 or permission of instructor. Lab fee $\$ 50$. Fulfills senior design requirement. Not offered 1994 95.

Serves as a mechanical engineering field elective. Requires a comprehensive technical report on the design project and fulfills the field design requirement. Students will form teams to design, analyze, and create a prototype of a new mechanism. The experience of creative synthesis is of primary importance; analytic skills will play a critical role in both concept evaluation and final design specification. This course aims to develop an appreciation for the balanced interplay between the synthetic analytic, and "just build it and see" processes. Student teams will present their work and analysis of techniques of special relevance to their design; e.g., dynamic simulation and kinematic analysis of CAD packags. Eclectic design topics include human-powered vehicles, robot submarines, technology appropriate for non-industrialized nations and projects for local industry.]

## M\&AE 461 Engineering for Entrepreneurs

 Fall. 3 creditsR. Warkentin.

Intent is to provide students with the tools and skills necessary to identify, evaluate, and undertake new business ventures. A major course project will be the development of a business plan for an innovative new venture
and will require the detailing of manufacturing, support, and information systems as well as staffing and cost data. Intended for juniors and seniors in the College of Engineering, this course is open to all undergraduates.

M\&AE 464 Design for Manufacture
Spring. 3 credits. Prerequisites: M\&AE 212 and 428 and senior standing. Enrollment limited. Fulfills field design requirement.
R. Warkentin.

Principles and methodologies for conceptual design; elimination procedures for selecting design alternatives; emphasis on design for manufacturability, quality, and cost considerations; team design projects from concept, analysis, and computer-aided drafting to manufacturing methods

M\&AE 465 Biomechanical SystemsAnalysis and Design
Spring. 3 credits. Prerequisites: Engr 202 and 203.

2 lecs, 1 lab. D. L. Bartel.
Selected topics trom the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

## M\&AE 469 Stress Analysis for

 Mechanical and Aerospace DesignFall. 3 credits. Prerequisite: T\&AM 202 and M\&AE 325 or permission of instructor.
J. F. Booker.

Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to the analysis and design of mechanical and aerospace systems and components. Review of fundamentals and application to classical problems. Introduction to modern computational methods (e.g., finite element) for analysis of stress and deformation.

## MeAE 478 Feedback Control Systems

 (also ELE E 471)Fall. 4 credits. Prerequisite: ELE E 302, M\&AE 326, or permission of instructor.

3 lecs. Open computer lab.
Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root locus, frequency response, and algebraic pole placement. Feedback architectures include PID, PDF, and lead/lag compensation. Applications include robotics, aerospace vehicles, and industrial processes. Computeraided design laboratory examines modeling and control of a computer-simulated dynamic system.

## M\&AE 486 Automotive Engineering

 DesignSpring. 4 credits. Prerequisite: M\&AE 428 and senior standing. Fulfills field design
requirement.
J. Lumley.

For description, see M\&AE 386

## M\&AE 489 Computer-Aided Design

 ProjectFall. 4 credits. Limited to seniors in mechanical engineering. Fulfills both field design and computer applications requirements.
D. L. Taylor.

Requires extensive project in addition to course assignments. For description, see M\&AE 389

## M\&AE 511 Survey of Manufacturing

 ProcessesSpring; may be offered in summer program. 3 credits. Prerequisites: graduate standing or permission of instructor. Not for M\&AE majors.

2 lecs, 1 lab; evening exams and prelims may be given. R. Warkentin. Yield criteria and plastic flow. Manufacturing processes for engineering materials, including metals, polymers, ceramics and composites. Casting, forming, material removal and joining processes. Intended for non-mechanical engineers.

## M\&AE 555 Introduction to Composite Materials (also T\&AM 555) <br> For course description, see T\&AM 555.

M\&AE 570 Intermediate Dynamics (also T\&AM 570)
Prerequisites: graduate standing or permission of instructor.
For course description, see T\&AM 570.

## M\&AE 577 Mechanical Vibrations (also

 T\&AM 574)Fall or spring. 3 credits. Prerequisites: graduate standing, permission of instructor, and M\&AE 326 or equivalent; open to qualified undergraduates. May be offered 1994-95.

2 lecs, 1 lab (occasional). W. H. Sachse. Vibration phenomena in single- and multiple-degree-of-freedom linear and nonlinear systems, with emphasis on engineering problems involving analysis and design.

## [M\&AE 578 Feedback Control Systems Design and Implementation

Spring. 3 credits. Prerequisite: M\&AE 478 or ELE E 471, graduate standing, or permission of instructor. Fulfills the computer application requirement. Not offered 1994-95.

1 lec, 2 labs. M. L. Psiaki.
Further development of the theory, design, and implementation of feedback control systems with particular emphasis on applications, modeling and system identification, and hardware implementation. Digital control is introduced. Labs include real-time micropro-cessor-based control of a D.C.-motor positioning system, a two-link robot arm, and a two-tank level-control system.]

## [M\&AE 590 Mechanical Engineering

## Design

Spring. 4 credits. Lab fee $\$ 25$. Prerequisites: graduate standing or permission of instructor. Intended for students in M.Eng.(Mechanical) program. Fulfills M.Eng. (M.E.) design requirement. Not offered 1994-95.l

## M\&AE 612 Materials Processing: Theory

 and ApplicationsFall. 4 credits. Prerequisite: graduate standing, or permission of instructor.
M. Miller.

Basic principles governing the inelastic behavior of solids. Slab-analysis models and bound theorems for problems of forging, extrusion, and rolling. Analysis of sheet-metal forming including limit diagrams and springback. Defect initiation during forming processes. Basic solidification processes. Morphological instability of a solid/liquid interface, solidification microstructures, solute redistribution, microsegregation and macrosegregation. Thermomechanical defects in casting processes. Rapid solidification microstructures. Behavior and forming of metal alloys in the semisolid state.

M\&AE 613 Computational Methods in Materials Processing
Spring. 4 credits. Prerequisite: M\&AE 612 or permission of instructor.
P. Dawson.

Thermodynamic framework for inelastic constitutive models, temperature and rate dependence, phenomenology of plastic deformation. The finite-element method for rigid plastic flow analysis of extrusion, drawing, forging, rolling and plate bending. Integration of viscoplastic models, geometry updating, boundary conditions, friction at tool/workpiece interface, modeling of incompressibility, iterative process, and applications to process design. Comparison of the flow formulation with an elasto-plastic analysis. Analysis of hot forming processes. Procedures for heat-transfer analysis. Preform design. Modeling of plastic anisotropy with applications to sheet forming. Modeling of heat flow and deformation on casting processes.

## M\&AE 614 Precision Engineering

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.

3 lecs, 1 lab (optional). H. B. Voelcker, This is a graduate version of M\&AE 414. The themes are ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Relevant theory is developed, current practices are summarized, and current research issues are examined. Research in the area is expanding rapidly, because formvariation control is a central tool in continuous quality improvement.
M\&AE 625 Product Development
Fall or spring. 4 credits. Prerequisite: graduate standing.

> S. Kannapan.

Covers a wide range of methods and techniques used in the product development process. Cognitive methods of design, team organization, conceptual design, parametric design, concurrent engineering, quality function deployment, and Taguchi method.

## M\&AE 655 Advanced Composite

 Materials and Structures (also T\&AM 655)For course description, see T\&AM 655.

## [M\&AE 665 Advanced Topics in Orthopaedic Biomechanics

 On demand. 4 credits. Prerequisites: graduate standing, prior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Not offered 1994-95.Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.]

## MeAE 670 Finite Element Analysis for

 Mechanical and Aerospace Design Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor.J. F. Booker.

Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of
large-scale, general-purpose structural mechanics programs. Introduction to computational aspects through development of small, special-purpose programs and application of available general-purpose programs. Term project.

## [M\&AE 678 Optimal Control and

 EstimationFall, on demand. 3 credits. Prerequisite: M\&AE 478, ELE E 471, graduate standing, or permission of instructor; programming ability in FORTRAN, Pascal, or C. Corequisite: ELE E 521. Not offered 1994-95 Develops the theory of the design of modern multi-input-multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQE compensator design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.]
M\&AE 679 Modeling and Simulation of Dynamic Systems
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Practice tools with selected applications from diverse fields. Representation of continuous dynamic systems by state-variable models. Simulation by numerical integration using procedural languages (such as FORTRAN and Pascal) and digital simulation packages (such as CSMP and STELLA). Special topics in linear and nonlinear dynamics. Term project.
[M\&AE 682 Hydrodynamic Lubrication: Fluid-Film Bearings
On demand. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1994-95.
J. F. Booker.

Theory of hydrodynamic lubrication and its application to the analysis and design of fluidfilm bearings and other devices. General topics include viscous flow in thin films, selfacting and externally pressurized bearings with liquid and gas lubricant films, bearingsystem dynamics, and computational methods. Selected special topics such as elastohydrodynamic lubrication and artificial joints. Term project.]

## [M\&AE 685 Optimum Design of Mechanical Systems

On demand. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1994-95.
The formulation of design problems frequently encountered in mechanical systems as optimization problems. Theory and application of methods of mathematical programming for the solution of optimum design problems.]

## M\&AE 715 Finite-Deformation Plasticity

 and Rheology and Their Applications in Materials ProcessingFall. 4 credits. Prerequisites: advanced graduate students, Introduction to Continuum Mechanics and Plasticity.

## N. Zabaras.

Hyperelasticity and hypoelasticity. Phenomenology of rate-dependent plastic deformation. Kinematic framework for inelastic constitutive modeling. Lagrangian and Eulerian FEM formulations for large deformation elastoviscoplastic problems.
Viscoplasticity coupled with damage. Slip systems and lattice rotation. Texture develop-
ment and strain hardening in rate-dependent polycrystals. Modeling of the evolution of deformation-induced crystallographic texture in forming processes. Rheological models for polymers.

## Energy, Fluids, and Aerospace Engineering

M\&AE 305 Introduction to Aeronautics
Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor.

## I. Boyd.

Introduction to the concept of aircraft design. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of propeller-driven and jet propulsion engines Design studies focus on transonic passenger airplanes and small supersonic jets.

M\&AE 423 Intermediate Fluid Dynamics Spring. 3 credits. Prerequisite: M\&AE 323. 3 lecs.
This course builds on the foundation of M\&AE 323. Emphasis will be both on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence and chaos.

## [M\&AE 436 Turbomachinery and

 ApplicationsSpring. 3 credits. Prerequisite; M\&AE 323 or 324 or permission of instructor. Not offered 1994-95.
Aerothermodynamic design of turbomachines in general, energy transfer between fluid and rotor in specific types, axial and radial devices, compressible flow. Three-dimensional effects, surging.]

## [M\&AE 439 Acoustics and Noise

Fall. 3 credits. Prerequisites: some knowledge of fluid mechanics or permission of instructor. Not offered 1994-95

3 lecs.
Sound propagation, transmission, and absorption. Sound radiation by surfaces and flow. Room acoustics and noise-control techniques. Hearing, music, noise, and noise control.]

## [M\&AE 441 Advanced Thermodynamics with Energy Applications

Spring. 3 credits. Prerequisites: M\&AE 221 and 323 , or permission of instructor. Not offered 1994-95.
Brief review of classical thermodynamics. Applications to power cycles and refrigeration cycles of particular interest to energy systems. Other topics include the thermodynamic properties of pure systems, phase and chemical equilibria. Brief introduction to statistical thermodynamics.]

MeAE 449 Combustion Engines
Spring, 3 credits. Prerequisites: Engr 221 and M\&AE 323.
E. Fisher.

Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes, combustion knock. Formation and control of undesirable exhaust emissions.
[MAAE 454 Solar Engineering Design Spring. 3 credits. Prerequisites: M\&AE 428 or senior standing in M\&AE. Fulfills field design requirement. Enrollment limited to 30 students. Not offered 1994-95.
A broad coverage of solar-energy utilization by humankind. Fundamentals of solar radiation. Direct radiation as a source of heat and work. Indirect radiation utilization or natural collection; water power, wind power, and biomass. The production of liquid and gaseous fuels. Solar architecture and environmental control by both active and passive means. Each student will execute a design project in solar engineering. Course grade will be based on design project; presentation of a design proposal, an oral presentation on the progress of the project, and submission of a final design report.]

## [M\&AE 456 Power Systems

Fall. 3 credits. Corequisites: M\&AE 428 and senior standing. Fulfills field design requirement. Not offered 1994-95
A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power-industry, economic, and environmental factors, trends, and projections.]

## M\&AE 459 Introduction to Controlled

 Fusion: Principles and Technology (also ELE E 484 and NS\&E 484)Spring. 3 credits. Prerequisites: PHYS 112
213 , and 214 , or equivalent background in electricity and magnetism and mechanics with permission of instructor. Intended for senior and graduate students.

3 lecs.
This course is intended to give engineering and physical science students an introduction to the physical basis and technological requirements for generating useful power by nuclear fusion. For complete description see NS\&E 484.

## [M\&AE 506 Aerospace Propulsion

 SystemsSpring. 3 credits. Prerequisite: M\&AE 323 or permission of instructor. Offered alternate years. Not offered 1994-95.

3 lecs. P. C. T. deBoer.
Application of thermodynamic and fluidmechanic principles to the design and performance of aerospace systems. Jet propulsion principles, including rockets. Pollution characteristics. Future possibilities for improved performance.]

M\&AE 507 Dynamics of Flight Vehicles Spring. 3 credits. Prerequisites: M\&AE 405 and Engr 203, or permission of instructor. Offered alternate years. Introduction to stability and control of atmospheric-flight vehicles. Review of aerodynamic forces and methods for analysis of linear systems. Static stability and control. Small disturbance equations of unsteady motion. Dynamic stability of longitudinal and lateral-directional motions; transient control response. At the level of Dynamics of Flight: Stability and Control, by Etkin.
[M\&AE 524 Thermal Management of Electronic Packages
Spring. 3 credits. Prerequisites: M\&AE 221 and MATH 294 or permission of instructor. Not offered 1994-95.
C. T. Avedisian.

This course presents the basic elements of heat transfer in the context of thermal control of a microelectronic package: conduction, convection, radiation, and boiling. The application is to semiconductor chips, transistors, resistors, and optoelectronic devices. Topics include component reliability and temperature; conduction of heat in steady and unsteady states; multilayered structures; thermal contact resistance; extended surfaces (fins); analyses of forced and natural convection flows over surfaces and within enclosures; functional solutions, Reynolds analogy, and integral analyses; calculation of the heat-transfer coefficient; the basics of radiative transfer; jet impingement cooling; immersion cooling; and compact heat exchangers.]

M\&AE 543 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, and combustion of solids.

## M\&AE 601 Foundations of Fluid

 Dynamics and AerodynamicsFall. 4 credits. Prerequisite: graduate standing or permission of instructor. S. B. Pope.

Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the NavierStokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

## M\&AE 602 Fluid Dynamics at High

 Reynolds NumbersSpring. 4 credits. Prerequisite: M\&AE 601 3 lecs. S. Leibovich.
Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorem. Fjortoft's theorem, Helmholtz decomposition of vector fields. Singularities vortex filaments, vortex sheets, Biot-Savart relations. Irrotational motion: representations in terms of velocity or vector potentials Topology of flows; general results in potential theory

## M\& AE 608 Physics of Fluids

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor I. Boyd.

Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: internal structure, rigid rotator, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics. These ideas are combined through
application to modeling finite rate changes in the vibrational energy and chemical composition of high-temperature air.
[Mat 639 Aerodynamic Noise Theory
Fall, on demand. 4 credits. Prerequisites: Graduate standing and knowledge of fluid mechanics, or permission of instructor. Not offered 1994-95.
Topics in acoustics relevant to transportation noise sources and control. Lighthill and Ffowes Williams formulations for sound generation. Deterministic and broadband sources. Propagation, nonlinear effects, absorption, diffraction, and transmission. Applications to aircraft, automobiles, propellers, fans, jets, etc.]
M\&AE 651 Advanced Heat Transfer
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

## [M\&AE 653 Experimental Methods in

 Fluid Mechanics, Heat Transfer, and CombustionSpring. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1994-95.

2 lecs, 1 lab.
Study of experimental techniques for measuring pressure, temperature, velocity, and composition of gases, with emphasis on experimental capabilities and physical principles. Topics include laser velocimetry, hot-wire anemometry, spectroscopy, and laser scattering. This course should appeal to theoreticians who wish to have some knowledge of experimental techniques. In addition, it will be of interest to experimentalists.]

M\&AE 654 Radiation Heat Transfer 2-4 credits. Prerequisite: graduate standing or permission of instructor
K. E. Torrance.

An independent readings course. Coverage of surface- and gas-radiation properties, including reflection, emission, absorption, and scattering. Deductions from the first and
second laws of thermodynamics. The radiative-transfer equation; surface-surface, surface-volume, and volume-volume exchange. Simplifying approximations Modern methods for exchange calculations and transport analysis including integral, computer-graphics-assisted, and Monte Carlo approaches. Assigned readings from Radiative Heat Transfer, by Modest. Discussion sessions. Assigned problems and papers.
[M\&AE 732 Analysis of Turbulent Flows Spring. 4 credits. Prerequisite: M\&AE 601 or permission of instructor. Offered alternate years. Not offered 1994-95.
S. B. Pope.

Study of methods for calculating the properties of turbulent flows. Characteristics of turbulent flows. Direct numerical simulations, large-eddy simulations, and the closure problem. Reynolds-stress equation: effects of dissipation, anisotropy, deformation.
Transported scalars. Probability density functions (pdf's): definitions and properties, transport equations, relationship to second-
order closures, stochastic modeling, Langevin equation, and Monte Carlo solutions. The course emphasizes comparison of theory with experiment.]

## M\&AE 733 Stability of Fluid Flow

Fall, on demand. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor.
S. Leibovich.

Basic stability and bifurcation theory in fluid systems. Thermal, double-diffusive, and related instabilities. Post-bifurcation behavior: the Ginzburg-Landau (Stewartson-Stuart) and Chapman-Proctor-Sivashinsky amplitude equations. Phase dynamics and pattern formation. Stability of periodic motion: Floquet theory. Secondary instabilities; Eckhaus instability, Busse "balloons." Energy stability theory. Effects of symmetry. TaylorCouette instability. "Open" flow systems: inviscid Kelvin-Helmholtz, Rayleigh-Taylor instability, and capillary instability of liquid jets. Stability of parallel shear flows and of concentrated vortex flows. Spatial development of linearly unstable motion: "absolute" and "convective" instability.

## M\&AE 734 Turbulence and Turbulent

 FlowFall. 4 credits. Prerequisite: M\&AE 601, graduate standing, or permission of instructor. J. L. Lumley.

Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.
M\&AE 736 Computational Aerodynamics Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience.

3 lecs. D. A. Caughey.
Numerical methods to solve inviscid and high Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming digital computer.
M\&AE 737 Computational Fluid Mechanics and Heat Transfer Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN or C programming experience.
K. E. Torrance.

Numerical methods for elliptic and parabolic partial differential equations arising in fluid flow and heat-transfer problems involving convection and diffusion. Finite-difference, finite-volume, and spectral methods. Accuracy, stability, convergence, and conservation. Review of current methods. Emphasis on steady and unsteady incompressible flows. Assigned problems are solved on a digital computer and at the College Workstation Facility.

## Special Offerings

M\&AE 400 Components and Systems: Engineering in a Social Context (also Physics 481 and Science, Technology, and Soclety 400)
Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as a technical elective but not as a field elective in mechanical engineering.
Z. Warhaft.

This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), the National Aerospace Plane, and nuclear power and its alternatives, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

## M\&AE 490 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Limited to undergraduate students. Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses

## M\&AE 491 Design Projects in Mechanical and Aerospace Engineering

Fall, spring. Credits to be arranged. Prerequisite or corequisite: M\&AE 428. Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

## MRAE 545 Energy Seminar (also NS\&E 545)

Fall and spring. 1 credit each semester Prerequisite: graduate standing or permission of instructor. Master of Engineering (M.Eng.) students in the energy option are expected to take the seminar course both fall and spring for credit.

1 lecture.
Selected topics related to energy resources, their conversion to electricity, process heat, etc., and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the College of Engineering, units within the university, and invited experts. Examples of topics that will be surveyed in these lectures are energy resources, economics, and politics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; synthetic fuels; air-pollution control; nuclear-waste disposal; electric-power transmission system; geothermal power; wind power; and advanced oil recovery.

## M\&AE 592 Seminar and Design Project in Aerospace Engineering

Fall, spring. 2 credits each term. Prerequisite: graduate standing or permission of instructor. Intended for students in M.Eng.(Aerospace) program.
Introduction to topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

M\&AE 594 Manufacturing Seminar (also ORRIE 894)
Fall, spring. 1 credit. Prerequisite: graduate standing or permission of instructor. S-U grades optional.

1 sec .
A weekly, practice-oriented seminar with external speakers for Master of Engineering students in several disciplines who are interested in manufacturing. Conducted in cooperation with the School of Operations Research and Industrial Engineering, the Cornell Manufacturing Engineering and Productivity Program (COMEPP), and the Cornell Society of Engineers.

## M\&AE 690 Special Investigations in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Limited to graduate students.

## M\&AE 695 Special Topics in Mechanical and Aerospace Engineering

Fall, spring. Credit to be arranged. Graduate standing and permission of instructor.
Special lectures by faculty members on topics of current research.

## M\&AE 791 Mechanical and Aerospace Research Conference

Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.
Presentations on research in progress by faculty and students.

## M\&AE 799 Mechanical and Aerospace

 Engineering CalloquiumFall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

## M\&AE 890 Research in Mechanical and Aerospace Engineering

Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

## M\&AE 990 Research in Mechanical and Aerospace Engineering

Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

## NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A\&EP $609,612,633,634,636,638$, and 651).

## NS\&E 121 Fission, Fusion, and Radiation

 (also ENGRI 121)Spring. 3 credits.
2 lecs, 1 lab demonstration.
This is a course in the Introduction to Engineering series. For description, see Engineering Common Courses.

NS\&E 285 Art, Archaeology, and Analysis (also ENGRG 185 and MS\&E 285)

Spring. 3 credits.
3 lecs. Interdepartmental staff.
An interdepartmental course on how techniques of physical sciences and engineering are being applied to issues in cultural research. For full description, see ENGRG 185.

## NS\&E 303 Introduction to Nuclear Science and Engineering I (also A\&EP 303)

Fall. 3 credits. Prerequisite: Physics 214 or Mathematics 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field.

3 lecs. V. O. Kostroun.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamarsh.
NS\&E 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M\&AE 559, and A\&EP 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213 , and 214 , or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students.

3 lecs.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (i) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (ii) fundamental aspects of plasma physics relevant to the confinement of thermonuclear plasmas, and basic engineering problems for a fusion reactor; and (iii) an engineering analysis of the present engineering design for the large, international, nextstep tokamak experiment, ITER (International Toroidal Experimental Reactor), which is to be a fusion-power test reactor, and/or analysis of inertial confinement fusion-reactor designs. Parts (i) and (ii) will be treated in lectures; part (iii) will include talks by course participants.

## NS\&E 509 Nuclear Physics for Applications

Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates.

3 lecs. D. D. Clark.
A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiocbemistry and Nuclear Methods of Analysis, by Ehmann and Vance or Nuclear and Radiochemistry, by Friedlander, et al.

## NS\&E 545 Energy Seminar (also M\&AE

 545)Fall and spring. 1 credit each semester.
Master of Engineering (M.Eng.) students in the Energy Option are expected to take this seminar both fall and spring for credit. 1 lec .
Energy resources, their conversion to electricity or process heat, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the College of Engineering, other units within the university, and invited experts. Examples of topics to be surveyed are energy resources, economics, and politics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; synthetic fuels; air-pollution control; nuclear-waste disposal; electric-power transmission systems; geothermal power; wind power; and advanced oil recovery.

## NS\&E 551 Nuclear Methods in Non-

 Nuclear Research FieldsSpring. 3 credits. Prerequisite: Physics 214 or 218 , or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology, geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A\&EP 651, is intended for nuclear specialists.

One 2-hour lec and one 2-1/2-hour lab. D. D. Clark.

Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments and methods including data reduction. About ten experiments are available on radiation detection, attenuation, and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on those nuclear methods, particularly instrumental ones using neutrons, that are used in, or are being adapted for, non-nuclear fields, but tracer and other chemical techniques are not included. Students each select seven or eight experiments to meet their interests and needs. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance or Nuclear and Radiochemistry, by Friendlander, et al.

## NS\&E 590 Independent Study

Fall, spring. $1-4$ credits. Grade option letter or S-U.
Independent study or project under guidance of a faculty member.

## NS\&E 591 Project

Fall, spring. 1-6 credits.
Master of Engineering or other project under guidance of a faculty member.

## NS\&E 621 Radiation Effects in

Microelectronics (also ELE E 637)
Fall. 3 credits. Prerequisite: Permission of instructor. A seminar intended for seniors and graduate students in engineering or applied physics.
$21-1 / 2$ hour lecs. S. C. McGuire. An introduction to the physical processes that underlie the malfunction of microelectronic circuitry resulting from exposure to ionizing radiation. Basic device-failure mechanisms, including total-dose effects, single-event upsets, and latchup, as well as the roles that
circuit testing and modeling methods play in improving circuit design. Impact of surface radiation typical of low-energy electron and photon sources on device fabrication.
Reference materials from the current literature

## NS\&E 637 Advanced Topics In Plasma

 Diagnostic TechniquesFall. 3 credits. Prerequisite: plasma physics at the level of both ELE E 581 and 582 (A\&EP 606 and 607 ) as well as the levels of mathematics and electrodynamics appropriate for those courses.

3 lecs. D. A. Hammer.
Addresses diagnostic methods in depth, emphasizing those that can be and are being used in experiments at Cornell. The complete list of specific topics will be determined by the interests of the participants, but will certainly include laser-based techniques and plasma spectroscopy. (This course does not include a laboratory component. Students interested in laboratory experience should take ELE E 481 instead of or in addition to NS\&E 637.)

## OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR\&IE 115 Engineering Application of Operations Research (also ENGRI 115)

Fall, spring. 3 credits. Enrollment not open to OR\&E upperclass majors.

2 lecs, 1 lab.
For description see Engineering Common Courses.

## OR\&IE 230 Discrete Mathematics

Spring. 3 credits. Prerequisite: one year of calculus or permission of instructor.

3 lecs.
A broad but thorough introduction to topics of discrete mathematics of use in a variety of fields of science and engineering. Topics include basic combinatorics and counting techniques, recurrence relations and generating functions, introduction to modular arithmetic with application to coding theory and experimental designs, and basic notions of graph theory with applications in optimization such as maximum flow in a network and project planning.
OR\&IE 270 Basic Engineering Probability and Statistics (also ENGRD 270)
Fall, spring, summer. 3 credits. Prerequisite: first-year calculus.

3 lecs. Evening prelims.
For description see Engineering Common Courses.

## OR\&IE 320 Optimization I

Fall. 4 credits. Prerequisite: Mathematics 221 or 294.

3 lecs, 1 rec.
Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

## OR\&IE 321 Optimization II

Spring. 4 credits. Prerequisite: OR\&IE 320 or equivalent.

3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn
from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

## OR\&IE 350 Financial and Managerial

 AccountingFall. 4 credits.
3 lecs, I rec. Evening prelims. Principles of accounting, financial reports, financial-transactions analysis; financialstatement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of shortterm decisions.

## OR\&IE 360 Engineering Probability and Statistics II

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. Not open to students who have taken OR\&IE 260.

3 lecs, 1 rec.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

## OR\&IE 361 Introductory Engineering

 Stochastic Processes ISpring. 4 credits. Prerequisite: OR\&IE 260 or OR\&IE 360 or equivalent.

3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

## OR\&IE 410 Industrial Systems Analysis Spring. 4 credits.

3 lecs, 1 computing session.
Design of production facilities, including engineering economy, taxation effects, materials handling, process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

## OR\&IE 416 Design of Manufacturing Systems

Fall. 4 credits. Senior OR\&F students only.
Others by permission of instructor only.
2 lecs, 1 lab.
Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee \$15.
OR\&IE 417 Material Handling Systems
Fall. 4 credits.
2 lecs, 1 rec.

Design of the layout of processes and storage areas and the material-handling system for movement of items. Typical equipment used. Material flow analysis. The functions of identification control, storage, movement, batching, merging, and dispersion.
ORaIE 431 Discrete Models
Spring. 4 credits. Prerequisites: OR\&IE 320 and COM S 211, or permission of instructor.

3 lecs, 1 rec.
Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

## ORRIE 432 Nonlinear Optimization

Fall. 4 credits. Prerequisite: OR\&IE 320. 3 lecs, 1 rec.
Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.
[OR\&IE 435 Introduction to Game Theory
Fall. 3 credits. Not offered 1994-95. 3 lecs.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.]

## [OR\&IE 451 Economic Analysis of

 Engineering SystemsSpring. 4 credits. Prerequisites: OR\&IE 320 and OR\&IE 350. Not offered 1994-95.

3 lecs, 1 computing session.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.]

## OR\&IE 475 Regression

Spring. Second half of term. 2 credits. Prerequisite: ENGRD 270.

3 lecs, 1 rec.
Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

OR\&IE 476 Experimental Design I Spring. First half of term. 2 credits. Prerequisite: ENGRD 270.

3 lecs, 1 rec.
Experimental design to improve industrial products and manufacturing processes. Randomization. Blocking. Fractional factorials. Orthogonal arrays. Nested designs.

## OR\&IE 499 OR\&IE Project

Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

## OR\&IE 515 Design of Manufacturing

 SystemsFall. 4 credits. Prerequisite: permission of instructor
For description, see OR\&IE 416. Lab fee \$15.
OR\&IE 516 Case Studies
Fall. 1 credit. Limited to M.Eng. students in OR\&IE.

3 rec-labs
Students are presented with unstructured problems that resemble real-world situations. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

## OR\&IE 520 Operations Research I: Optimization I

Fall. 4 credits. Prerequisite: Mathematics 221 or 294. Intended for graduate students minoring in operations research. The same course as OR\&IE 320, but on the graduate level with additional exposure to extensions of linear programming, such as integer and large-scale programming.

3 lecs, 1 rec
For description, see OR\&IE 320.
OR\&IE 521 Optimization II
Spring. 4 credits. Prerequisite: OR\&IE 320 or 520 or equivalent. Intended for graduate students in other fields. Lectures concurrent with OR\&IE 321.

3 lecs, 1 rec.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed, as well as numerous applications.

OR\&IE 523 Operations Research II: Introduction to Stochastic Modeling Spring. 4 credits. Prerequisite: OR\&IE 260 or OR\&IE 360. Intended for graduate students in other fields. Lectures concurrent with OR\&IE 361.

3 lecs, 1 rec.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest.
Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability
OR\&IE 525 Production Planning and Scheduling Theory and Practice Spring. 3 credits. Prerequisite: OR\&IE 320. 3 lecs.
Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

## OR\&IE 528-529 Selected Topics in Applied Operations Research

Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

## [OR\&IE 551 Economic Analysis of

 Engineering SystemsSpring. 4 credits. Prerequisites; OR\&IE 320 and OR\&IE 350. Not offered 1994-95.

3 lecs, 1 computing session.
Lectures concurrent with OR\&IE 451. For description see OR\&IE 451.]

OR\&IE 560 Engineering Probability and Statistics II
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. Lectures concurrent with OR\&IE
360. Intended for M.Eng. students and for M.S./Ph.D. students in other fields.

3 lecs, 1 rec.
For description, see OR\&IE 360.

## [OR\&IE 561 Queuing Theory and Its

 ApplicationsSpring. 3 credits. Prerequisite: OR\&IE 361 or permission of instructor. Not offered 1994-95 3 lecs.
Basic queuing models. Little's Law, PASTA property, Markovian and non-Markovian queues. Optimization of queues. Polling queues: exhaustive and gated service.
Jackson queuing networks. Open networks and closed networks. Product-form queuing networks.]

## OR\&IE 562 Inventory Theory

Spring. 4 credits. Prerequisite: OR\&IE 321, 361 or permission of instructor.

## 2 lecs, 1 rec

Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-item and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Distribution problems are analyzed. Applications are stressed.

## OR\&IE 563 Applied Time-Series Analysis

 Spring. 3 credits. Prerequisites: OR\&IE 361 and OR\&IE 270, or permission of instructor. 3 lecs.The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a timeseries package
[OR\&IE 575 Experimental Design II
Spring. Last half of term. 2 credits. Prerequisite: OR\&IE 476. Not offered 1994-95. 3 lecs, 1 rec
Continuation of OR\&IE 476. Design of industrial experiments. Response surfaces. Robust product designs. Taguchi's methods.]

## OReIE 577 Quality Control

Fall. 3 credits. Prerequisites: ENGRD 270. 3 lecs, 1 rec
Concepts and methods for process and acceptance control. Control charts for variables and attributes. Process capability analysis. Acceptance sampling. Continuous sampling plans. Life tests. Use of experimental design and Taguchi methods for off-line control.

## OR\&IE 580 Design and Analysis of Simulated Systems

Fall. 4 credits. Prerequisites: programming experience and OR\&IE 360 or 370 , or permission of instructor.

3 lecs, 1 rec
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

## OR\&IE 599 Project

Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR\&IE field. A formal report and oral defense of the approach and solution are required.

## [OR\&IE 625 Scheduling Theory

Spring. 3 credits. Not offered 1994-95 3 lecs.
Scheduling and sequencing problems, including single-machine problems, parallelmachine scheduling, and shop scheduling The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.]

## [OR\&IE 626 Advanced Production and

 Inventory PlanningSpring. 3 credits. Not offered 1994-95. 3 lecs.
Introduction to a variety of production and inventory control planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.]

## [OR\&IE 627 Dynamic Programming

Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1994-95.

3 lecs.
Optimization of sequential decision processes Deterministic and stochastic models, infinitehorizon Markov decision models, policy iterations. Contraction mapping methods. Applications drawn from inventory theory, production control.]

OR\&IE 630 Mathematical Programming I
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.

3 lecs, 1 rec.
A rigorous treatment of the theory and computational techniques of linear programming and its extensions. Formulation, duality theory, simplex, and dual simplex methods. Sensitivity analysis. Network flow problems and algorithms. Theory of polyhedral convex sets, systems of linear equations and inequalities, Farkas' Lemma. Exploiting special structure in the simplex method, computational implementation. Decomposition Principle.

## [ORAIE 631 Mathomatical

 Programming IISpring. 4 credits. Prerequisite: OR\&IE 630. Not offered 1994-95.

3 lecs, 1 rec.
A continuation of OR\&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Some discussion of dynamic programming, and elementary polyhedral theory.]
[OR\&IE 632 Nonlinear Programming
Fall. 3 credits. Prerequisite: OR\&IE 630. Not offered 1994-95.

3 lecs.
Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.]

OR\&IE 633 Graph Theory and Network Flows
Fall. 3 credits. Prerequisite: permission of instructor.

3 lecs.
Directed and undirected graphs. Bipartite graphs. Hamilton cycles and Euler tours. Connectedness, matching, and coloring. Flows in capacity-constrained networks. Maximum flow and minimum cost flow problems.

OReIE 634 Combinatorial Optimization
Fall. 3 credits. Prerequisite: permission of instructor.

3 lecs.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms.

## [OR\&IE 635 Interior-Point Methods for Mathematical Programming

Spring. 3 credits. Prerequisites: Math 411 and OR\&IE 630, or permission of instructor. Not offered 1994-95.

3 lecs.
Interior-point methods arising from Karmarkar's Algorithm. Application to linear and quadratic programming and the linear complementarity problem. Projective-scaling, affine-scaling, path-following, and potentialreduction methods.]

## OR\&IE 636 Integer Programming

Fall. 3 credits. Prerequisite: OR\&IE 630. 3 lecs.
Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

## [OR\&IE 639 Polyhedral Convexity

Fall. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 1994-95. A comprehensive introduction to the geometry and combinatorics of polyhedral convex sets. Linear inequalities, supporting and separating hyperplanes. Polarity. Convex hulls, facets, and vertices. Face lattices. Convex cones and polytopes. Minkowski sums. Gale transforms. Simplicial and polyhedral subdivision. Applications to linear programming, combinatorial optimization, and computational geometry.]

## OR\&IE 650 Applied Stochastic

## Processes

Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. 3 lecs, 1 rec.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

## OR\&IE 651 Probability

Spring. 4 credits. Prerequisite: Real analysis at the level of Math 413 and a previous onesemester course in calculus-based probability. 3 lecs, 1 rec.
Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

OR\&IE 662 Advanced Stochastic Processes
Fall. 3 credits. Prerequisite: OR\&IE 651 or equivalent.

3 lecs.
Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes. point processes, weak convergence for stochastic processes and applications to diffusion approximations, Lévy processes, regenerative phenomena, random walks, and stochastic integrals.

## [OR\&IE 663 Time-Series Analysis

Spring. 3 credits. Prerequisite: OR\&IE 650 or equivalent. Not offered 1994-95. 3 lecs.
Representations of stationary time series. The ARIMA models. Spectral analysis. Long-range dependence. Problems of estimation.
Multivariate time series.]

## [OR\&IE 665 Advanced Gueuing Theory

Spring. 3 credits. Prerequisite: OR\&IE 650 or equivalent. Not offered 1994-95. 3 lecs.
A study of stochastic processes arising in a class of problems including congestion, storage, dams, and insurance. The treatment is self-contained. Transient behavior of the processes is emphasized. Heavy-traffic situations are investigated.]

## OR\&IE 670 Statistical Principles

Fall. 4 credits. Co-requisite: OR\&IE 650 or equivalent.

3 lecs, 1 rec.
Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, $t$, and $F$; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

## [OR\&IE 671 Intermediate Applied

 StatisticsSpring. 3 credits. Prerequisite: OR\&IE 670 or equivalent. Not offered 1994-95.

3 lecs.
Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.]

## [OR\&IE 676 Statistical Analysis of Life

 DataSpring. 3 credits. Prerequisite: OR\&IE 671 or equivalent. Not offered 1994-95.
Analysis of data from reliability, fatigue, and life-testing studies in engineering; biomedical applications. Survival distributions, hazard rate, censoring. Life tables. Estimation and hypothesis testing. Standards. Goodness of fit, hazard plotting. Covariance analysis, accelerated life testing. Multiple decrement models, competing risks. Sample-size determination. Adaptive sampling.]

## OR\&IE 680 Simulation

Spring. 4 credits. Prerequisite: permission of instructor.

3 lecs, 1 rec.

An advanced version of OR\&IE 580, intended for Ph.D.-level students.

## OR\&IE 728-729 Selected Topics in

 Applied Operations Research Fall, spring. Credit to be arranged. Current research topics dealing with applications of operations research.OR\&IE 738-739 Selected Topics in Mathematical Programming Fall, spring. Credit to be arranged. Current research topics in mathematical programming.

## OR\&IE 768-769 Selected Topics in

 Applied ProbabilityFall, spring. Credit to be arranged.
Topics are chosen from current literature and research areas of the staff.

## OR\&IE 778-779 Selected Topics in Applied Statistics

Fall, spring. Credits to be arranged.
Topics chosen from current literature and research of the staff.

## OR\&IE 790 Special Investigations

Fall, spring. Credit to be arranged.
For individuals or small groups. Study of special topics or problems.
OR\&IE 799 Thesis Research
Fall, spring. Credit to be arranged.
For individuals doing thesis research for master's or doctoral degrees.

OR\&IE 891 Operations Research Graduate Colloquium
Fall, spring. 1 credit.
A weekly $1-1 / 2$ hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

## OR\&IE 893-894 Applied OR\&IE

 Colloquium ( 894 also M8AE 594)893, fall; 894, spring. 1 credit each term. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

## THEORETICAL AND APPLIED MECHANICS

## Basics in Engineering Mathematics and Mechanics

T\&AM 123 Sensors and Actuators (also Engr 123)
Fall. 3 credits.
2 lecs, 1 lab.
For description, see Engineering Common Courses.

T\&AM 181 Structures and Machines in Uban Society (also Engr 181)
Fall. 3 credits. R. Lance.

For description, see Engineering Common Courses.

T\&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 3 credits.
2 lecs, 1 rec, 4 labs each semester, evening exams.
For description, see Engineering Common Courses.

T\&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T\&AM 202, coregistration in Mathematics 294, or permission of instructor

2 lecs, 1 rec, 4 labs each semester, evening exams.
For description, see Engineering Common Courses

## Engineering Mathematics

T\&AM 191 Calculus for Engineers (also Mathematics 191)
Fall. 4 credits. Limited to 25 students per section. Prerequisite: 3 years of high school mathematics, including trigonometry.

3 lecs, 2 recs, evening exams.
Plane analytic geometry, differential and integral calculus, and applications.

## [T\&AM 192 Calculus for Engineers (also

 Mathematics 192)Fall, spring, or summer. 4 credits. Prerequisite: Mathematics/T\&AM 191. Not offered 1994-95.

3 lecs, 2 recs, evening exams.
Methods of integration, hyperbolic functions, polar coordinates, infinite series, complex numbers, introduction to partial derivatives introduction to surface and volume integrals.]

## T\&AM 293 Engineering Mathematics

 (also MATH 293)Fall, spring. 4 credits. Prerequisite: Mathematics/T\&AM 192 or Mathematics 194.

2 lecs, 1 rec, 4 labs each semester, evening exams.
Partial derivatives and multiple integrals; firstand second-order differential equations with applications in the physical and engineering sciences. Includes microcomputer experiments using computer algebra to solve problems.

## T\&AM 294 Engineering Mathematics

 (also MATH 294)Fall, spring. 4 credits. Prerequisite: Mathematics/T\&AM 293

2 lecs, 1 rec, 4 labs each semester, evening exams.
Vector spaces and linear algebra, matrices, eigenvalue problems, and applications to systems to linear differential equations. Vector calculus. Boundary-value problems and introduction to Fourier series. Includes microcomputer experiments using computer algebra to solve problems.

## T\&AM 310 Advanced Engineering Analysis 1

Fall, spring. 3 credits. Prerequisite: Mathematics 294 or equivalent

2 lecs, 1 rec .
Ordinary differential equations as applied in engineering context. Special functions, initial value, boundary value, and eigenvalue problems in linear partial differential equations; introduction to nonlinear ordinary differential equations. Use of computer algebra to solve problems. In the last part of the course, students choose one of two options: (1) introduction to nonlinear ordinary differential equations and Laplace transform methods; (2) introduction to probability and statistics

## T\&AM 311 Advanced Engineering

Analysis II
Spring. 3 credits. Prerequisite: T\&AM 310 or equivalent.
Functions of several variables, introduction to complex variables, analytic functions,
conformal mapping, method of residues

Application to the solution of Laplace's equation, and transform inversion techniques. Examples drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

## T\&AM 610 Methods of Applied

 Mathematics IFall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T\&AM 310-311) but open to exceptional undergraduates with permission of instructor. 3 lecs.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

## T\&AM 611 Methods of Applied

Mathematics II
Spring. 3 credits. Prerequisite: T\&AM 610 or equivalent

3 lecs.
Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

## [T\&AM 612 Methods of Applied

Mathematics III
Fall. 3 credits. Prerequisite: T\&AM 610 or 611 or equivalent. Offered alternate years. Not offered 1994-95. First of a 6-credit sequence (T\&AM 612 and 613) that develops advanced mathematical techniques for engineers and applied physicists.
Review of complex variable theory, conformal mapping, special functions, integral transform, Wiener-Hopf technique, and singular integral equations. Problems drawn from electromagnetics, elasticity, fluid mechanics, heat transfer and acoustics.]

## [T\&AM 613 Methods of Applied Mathematics IV

Spring. 3 credits. Prerequisite: T\&AM 612 or equivalent. Offered alternate years. No offered 1994-95.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer algebra (MACSYMA) exercises at the option of the instructor.]

## T\&AM 614 Topics in Applied

Mathematics V
Fall. 3 credits. Prerequisites: T\&AM 610-613 or equivalent. Offered alternate years.
Topics such as nonlinear wave motion, bifurcation theory, or computer algebra will be covered, depending on the instructor and student interest.

## T\&AM 615 Topics in Applied

Mathematics VI
Spring. 3 credits. Prerequisites: T\&AM 610613 or equivalent. Offered alternate years. See T\&AM 613 for description

## Continuum Mechanics

T\&AM 501 Topics in Composites I
Fall. 1 to 3 credits ( 1 credit each topical minicourse)

Analysis of Composite Structures (T. J. Healey)
Linear analysis of thin structural members possessing anisotropic material properties relevant to a composite. Focus on analysis, rather than on modeling or design. Topics include: (1) analysis of rodes, beams, and sandwich beams; (2) analysis of thin, orthotropic plates; and (3) analysis of thin orthotropic cylindrical shells. Grading may be based on homework and a short final examination

## Biological Composites I (J. T. Jenkins)

Overview of the microstructural features and the origin of mechanical properties of bone and soft tissues, such as tendon, ligament, muscle, and skin, and outline of their use as structural components. Survey of design principles for composite materials that mimic those found in biological systems. Final grade determined by the student's in-class presentation on a relevant topic.
Design Principles for Composite Structures (R. H. Lance)

A review of thermo-mechanical behavior of anisotropic, orthotropic, and transversely isotropic materials. Includes development of pertinent equations for laminated materials and sandwich structures. Application is made to the design and analysis of rods, beams, tubs, and plates. Examples drawn from space structures
Mechanical Testing of Composite Constituents (P. Petrina)

Focuses on the theoretical and experimental characterization of strength and life of advanced composite constituents and materials. Reviews test methods, specimen preparation, testing, data reduction, and analysis. Perform laboratory experiments to determine short-term strength distribution of fiber material, and the evaluation of interface and life strength.
Reliability Models for Composites
(S. L. Phoenix)

Surveys statistical models for the strength of fibers, fiber bundles, and composites with emphasis on reliability assessment. Features include the roles of the Weibull distribution, size effects, and the micromechanics of stress transfer around fiber breaks. Time-dependent failure in fatigue is considered as an extension involving matrix creep and interface
debonding. Grades are based on several homework tasks.

T\&AM 502 Topics in Composites II Spring. 1 to 3 credits ( 1 credit each topical minicourse)
Design and Manufacturing of Laminated Composites (P. Petrina)
Students learn to manufacture and to perform analysis and design of laminated composite structures. Practical applications will include manufacturing and analysis of bars, tubes, sandwich beams, and plates. Each student will have a chance to make several types of composite structures and have access to software for the analysis.
Nondestructive Testing of Composites (W. Sachse)

Overview of nondestructive testing techniques that are used to monitor composite materialfabrication procedures to determine the mechanical properties of composite specimens
and to assess the integrity of composite structural components. A survey of current NDT research. Topics include (1) goals and problems of NDT/NDE measurements in composites, (2) survey of NDT rechnologies applicable to measurements in composites, (3) active (UT) and passive (AE) ultrasonic NDT measurements in composite materials, and (4) developments and directions of NDT research applicable to composite materials evaluation. Grade based on laboratory work and a written response to a specific composite NDT problem.

## T\&AM 555 Introduction to Composite

 Materials (also M\& AE 555)Fall. 4 credits.
R. H. Lance

Introduction to composite materials: varieties of reinforcements, matrix materials, and their properties. Mechanics and failure analysis of lamina, laminates, and wound structures Introduction to micromechanics theories of composites, manufacturing methods,
fabrication and assembly techniques,
composite applications, environmental effects.

## [T\&AM 569 Sensors

Fall. 3 credits. Not offered 1994-95.
3 lecs a week, 4 labs a semester.
This course deals with the general properties of sensors and actuators used in measurement and process-control applications involving thermal and mechanical quantities. Considered are sensors and actuators based on a broad range of physical transduction phenomena. Attention is given to the development of sensor models and criteria for evaluating the general performance characteristics of a sensor, including its transduction characteristics and its measurement field. Also studied are algorithms for processing sensor signals to recover the characteristics of the sensor or to remove its effect in a specific measurement application. An integral part of the course is the Sensors Laboratory, which provides students with hands-on opportunities for measuring the characteristics and operational parameters of a broad range of thermo-mechanical sensors.!

## T\&AN 591 Master of Engineering Design Project I

Fall. 3-5 credits.
Staff.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

## T\&AM 592 Master of Engineering Design Project II

Spring. $5-10$ credits
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

## T\&AM 655 Advanced Composite

Materials and Structures (also M\&AE 655)

Spring. 4 credits.
Advanced mechanics of composite materials Strength theory of continuous- and discontinu-ous-reinforced composites. Micromechanics, interface mechanics, modes of failure, creep rupture. Mechanics of strcutural components. Design and analysis of composite structures: pressure vessels, aerospace structures, thick composites, and plates. Adhesive bonding and mechanical fastening. Dynamic effects and hygrothermal effects

## T\&AM 663 Solid Mechanics I

## Fall. 4 credits.

Rigorous introduction to small-strain solid mechanics with emphasis on linear elasticity; stress, strain, tensors, balance laws, energy principles, general theory of linear elasticity, and solutions of elementary boundary-value problems.

## T\&AM 664 Solid Mechanics II

Spring. 4 credits. Prerequisites: Mathematics 610 and T\&AM 663, or equivalent

3 lecs, 1 lab
Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity, large deformations, noniinear elasticity, linear visco-elasticity, mechanics of defects (cracks and dislocations), classical plasticity, and constitutive relations.

## [T\&AM 751 Continuum Mechanics and Thermodynamics

Fall. 3 credits. Prerequisites: T\&AM 610 and 611 ; and 663 and 664 or equivalents. Offered alternate years. Not offered 1994-95

3 lecs.
Kinematics, conservation laws, the entropy inequality, constitutive equations, frame indifference, material symmetry. Ratedependent materials and materials with internal variables.]

## T\&AM 752 Nonlinear Elasticity

Fall. 3 credits. Prerequisites: T\&AM 610 and 611 ; and 663 and 664 or equivalents. Offered altemate years.

3 lecs.
Review of kinematics and constitutive theory appropriate for large deformations of nonlinearly elastic bodies. The basic field equations of nonlinear elastostatics and elastodynamics. Exact solutions of special problems. Linearization and stability Nonlinear theories of thin structural members and their relationship to the three-dimensional theory. Introduction to static bifurcation theory with applications to strings, rods, plates, and shells.

## IT\&AM 753 Fracture

Fall. 3 credits. Prerequisites: T\&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1994-95.

3 lecs.
Topics will be selected from (1) elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems; (2) nonlinear rate-independent, small-deformation fracture mechanics: plastic fracture, J-integral, small-scale yielding; (3) rate-dependent fracture mechanics: dynamic fracture, creep fracture; (4) mechanics of failure in polymers, ceramics, composites, and metals: void growth, load transfer between fibers, crazing.]

## [T\&AM 757 Inelasticity

Spring. 3 credits. Prerequisites: T\&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1994-95. 3 lecs.
Inelasticity; plasticity, visco-elasticity, and modern nonlinear theories. Plasticity: general principles, limit analysis, and boundary value problems. Visco-elasticity: general principles and solution of boundary value problems. Modern state variable theories: their relation to classical theories, their phenomenology, and use in solving boundary value problems.]

## T\&AM 759 Computational Methods

Fall. 4 credits. Prerequisites: T\&AM 610 and 611 ; and 663 and 664 or equivalents. Offered alternate years.

3 lecs.
The aim of this course is to survey a wide range of applications of the boundary element method (BEM) and finite element method (FEM) in solid mechanics. The boundary element method will be introduced and then be used in problems in linear elasticity, diffusion, wave propagation, and problems with material and/or geometric nonlinearities. Finite-element applications will emphasize nonlinear problems in solid mechanics

## [T\&AM 768 Elastic Waves

Fall. 3 credits. Prerequisites: T\&AM 610 or 611; and 663 and 574 or equivalents. Offered alternate years. Not offered 1994-95

3 lecs.
An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics. Waves in isotropic and anisotropic media. Reflection and refraction. Surface waves and waves in layered media. Transient waves and methods of Lamb-Cagniard-Pakeris. Thick-plate theories. Vibration of spheres. Scattering of waves and dynamic stress concentration.]

## Dynamics and Space Mechanics

T\&AM 570 Intermediate Dynamics (also M\&AE 570)
Fall. 3 credits
2 lecs.
Introduction to analytical mechanics; virtual work, Lagrangian mechanics. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies.

## T\&AM 574 Vibrations and Waves in

 Elastic Systems (also M\&AE 577) Spring. 4 credits. Prerequisites: T\&AM 570 and 610.$$
3 \text { lecs, } 1 \text { lab. }
$$

Oscillations and one- and two-degree-of freedom vibrating systems. General properties of vibrating systems. Modal analysis.
Vibration of continuous systems. Elementary nonlinear systems and chaos. Characterization of vibrating systems. Measurements and applications. Two vibrations laboratory experiments.

## T\&AM 671 Advanced Dynamics

Spring. 3 credits. Prerequisite: T\&AM 570 or equivalent. Offered alternate years.
Review of Lagrangian mechanics; Hamilton's principle, the principle of least action, and related topics from the calculus of variations Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory

## T\&AM672 Celestial Mechanics (also

 Astronomy 579)Spring. 3 credits. Offered alternate years. Two $11 / 4$-hour lecs.
Description of orbits; 2-body, 3-body, and nbody problems; Hill curves, libration points and their stability; capture problems; virial theorem. Osculating elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings

## [T\&AM 673 Mechanics of the Solar

 System (also Astronomy 571) Spring. 3 credits. Prerequisite: an undergraduate course in dynamics. Offered alternate years. Not offered 1994-95.Gravitational potentials, planetary gravity
fields. Free and forced rotations. Chandler wobble, polar wander, damping of nutation. Equilibrium tidal theory, tidal heating. Orbital evolution of natural satellites, resonances, spin-orbit coupling, Cassini states. Long-term variations in planetary orbits. Dust dynamics. Dynamics of ring systems. Physics of interiors, seismic waves, free oscillations. Illustrative examples are drawn from contemporary research.]

## [T\&AM 675 Nonlinear Vibrations

Fall. 3 credits. Prerequisite: T\&AM 574 or equivalent. Offered alternate years. Not offered 1994-95.
Review of linear systems, free and forced vibrations. Nonlinear systems, phase plane methods, method of isoclines. Conservative systems. General autonomous systems, equilibrium and periodic solutions, linearization and Lyapunov stability criteria, PoincaréBendixson theorem. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, KrylovBogoliubov method. Applications to problems in mechanics.]

## T\&AM 776 Applied Dynamical Systems

 (also Math 617)Fall. 3 credits. Suggested prerequisite: T\&AM 675, Mathematics 517, or equivalent. Offered alternate years.
Review of planar (single-degree-of-freedom) systems. Local and global analysis. Structural stability and bifurcations in planar systems. Center manifolds and normal forms. The averaging theorem and perturbation methods. Melnikov's method. Discrete dynamical systems, maps and difference equations, homoclinic and heteroclinic motions, the Smale Horseshoe and other complex invariant sets. Global bifurcations, strange attractors and chaos in free and forced oscillator equations. Applications to problems in solid and fluid mechanics.

## Special Courses, Projects, and Thesis Research

T\&AM 491-492 Project in Engineering Science
491, fall; 492, spring. $1-4$ credits, as arranged. Projects for undergraduates under the guidance of a faculty member.

## T\&AM 796-800 Topics in Theoretical and

 Applied MechanicsFall, spring. 1-3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

## T\& AM 890 Master's Degree Research in

 Theoretical and Applied Mechanics Fall, spring. 1-15 credits, as arranged. S-U grades optional.Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

## T\&AM 990 Doctoral Research in

 Theoretical and Applied Mechanics Fall, spring. $1-15$ credits, as arranged. S-U grades optional.Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

## Walter Cohen, dean

Christine Ranney, associate dean
Eleanor S. Reynolds, associate dean
Hilary Ford, assistant dean
Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

## GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.
Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as nondegree students.

## REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.
Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be
6) a Test of English as a Foreign Language (TOEFL) score of 550 or higher;
7) a degree from a college or university in a country where the native language is English; or
8) two or more years of study in an undergraduate or graduate program in a country where the native language is English.
Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.
Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications by January 10 .
Applicants who are also applying for Cornell Graduate School fellowship consideration must submit their completed applications and supporting credentials by January 10.
Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Comell University, Sage Graduate Center, Ithaca, New York 148536201.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.
More detailed information may be obtained from the following publications: the Graduate Scbool Catalog, available from Cornell University Catalogs, 122 Maple Avenue, Ithaca, NY 14850-4902, and the application Graduate Study at Cornell University, available from the Graduate School, Cornell University, Sage Graduate Center, Ithaca, New York 14853-6201.
Note:Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.

Information concerning admission requirements and courses of study for degrees not administered by the Graduate School may be obtained from the several schools and colleges that administer them.

## SCHOOL OF HOTEL ADMINISTRATION

## ADMINISTRATION

## David A. Dittman, dean

Michael H. Redlin, associate dean for academic affairs
David W. Butler, associate dean for executive education

Susanne DeGraba, assistant dean for finance and administration

## Degree

Hotel and Restaurant Administration
B.S.
M.P.S.
M.S.

Ph.D.
the school's academic and executiveeducation programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

## The School of Hotel Administration

Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 volumes, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The Hospitality Database, an extensive and unique (one of only four in America) index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

## Statler Hotel and J. Willard Marriott

 Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive-education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independentstudy projects. It offers part-time jobs to approximately 250 students each semester with preference given to students in the hotel school.
## UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management, including accounting, finance, marketing, operations, communication, properties management, information technology, law, and human resources management. The school's graduates hold executive positions in a variety of industries, but are especially well represented in the management of hospitalityrelated enterprises, including the lodging, food service, and travel industries.
Students are encouraged to pursue a broad range of courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming positions in the business community.

Included in the basic curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, properties management, communications, and law
The basic program leading to the undergraduate degree in hotel administration, as set forth below, is enriched by a broad selection of free and distributive elective courses offered by the school and elsewhere in the university. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

## Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 560 on Cornell Placement Test; 3) pass 121 and 122 ( 8 credits) and score 560 on Comell Placement Test; or 4) pass 123.
4) completion of two units of practice credit prior to the last term of residence, as defined on the following page;
5) completion of the university requirement in physical education.
Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the selected concentration accounts for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met. Note: Students who matriculated before the fall of 1993 should refer to the Hotel School's "course supplement" for graduation requirements.
Students in the School of Hotel Administration who plan to attend summer school at Comell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 21 -credit group of free electives.

## Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty ( 60 ) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of fortyfive (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows:
Core
Concentration
Distributive Electives
Free Electives

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others (including HA 243 and HA 174) generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.
Concentration courses may not transfer without the express written consent of the faculty in the area concerned. While such consent is rare, it is not impossible
Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine (9) credits may transfer. The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken (at Comell or transferred from elsewhere) in each area.
Twenty-one (21) credits in free electives may transfer.

## Concentration

While completing the required courses leading to the bachelor's degree, undergraduates in the school also must select a concentration: 12 elective credits in a major area of the core curriculum or, with the support of a faculty member, in a self-directed course of study.
When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

## Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Comell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

## Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

## Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last semester. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's Career Services Office, room 153 Statler Hall.

## Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 academic credits, 1 practice credit, and may petition on an ad-hoc basis to have a portion of the academic credits applied toward their concentration. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the U.S. and internationally. Sponsors include hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 153 Statler Hall.

## Study Abroad

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).
Students should discuss their plans with the school's study-abroad faculty representative and the director of student services so that all petition and credit-evaluation procedures are followed.

## Grading System

Letter grades ranging from $\mathrm{A}+$ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to $4.0 ; \mathrm{B}$ to $3.0 ; \mathrm{C}$ to $2.0 ; \mathrm{D}$ to $1.0 ; \mathrm{F}$ to 0 . For good standing, the student must maintain a minimum average of 2.0. Of the free-elective courses, a maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals "C-" or above and an unsatisfactory grade equals " $\mathrm{D}+$ " or lower. Courses
taken S-U may be counted only as free electives.
Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

## Course Requirements for Graduation

Required courses Credits
Management Operations: Hotel Administration 105, 301 6

Human-Resources Management: Hotel Administration 115, 211 6

Financial Management: Hotel
Administration 121, 221, 222, 321 12
Food and Beverage Management: Hotel Administration 136, 236, 33512
Marketing and Tourism: Hotel Administration 243, elective ..... 6
Properties Management: Hotel Administration 255, 355 ..... 6

Communication: Hotel Administration 165, 365 6
Operations Management and Information Technology: Hotel Administration 174, 175
Law: Hotel Administration 3873
Economics: Micro and Macro 6
Specifically required credits $\quad 69$
Concentration 12
Distributive electives 18
Free electives 21
Total credits required for graduation 120

## Typical Course Sequences

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

## Freshman Year

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:
Required courses
Credits
H Adm 105, Rooms Division Management
H Adm 115, Organizational Behavior
$\quad$ and Interpersonal Skills
H Adm 121, Financial Accounting 3
H Adm 136, Food and Beverage Management

H Adm 165, Managerial
Communication I ..... 3

H Adm 174, Microcomputing ..... 3
H Adm 175, Quantitative Methods ..... 3
H Adm 191, Microeconomics for the Service Industries ..... 3
Macroeconomics ..... 3
Distributive or free electives ..... $\frac{3}{31}$

| Sophomore Year |  |
| :---: | :---: |
| Required courses | Credits |
| H Adm 211, Human Resources Management | 3 |
| H Adm 221, Managerial Accounting | 3 |
| H Adm 222, Finance | 3 |
| H Adm 236, Culinary Theory and Practice | ice 4 |
| H Adm 243, Principles of Marketing | 3 |
| H Adm 255, Hotel Development and Planning | 3 |
| Distributive electives | 3-6 |
| Free electives | 3-6 |
|  | 25-31 |
| Junior Year |  |
| Required courses | Credits |
| H Adm 301, Strategic Management | 3 |
| H Adm 321, Hospitality |  |
| H Adm 335, Restaurant Management | 4 |
| H Adm 355, Hospitality Facilities Operations | 3 |
| H Adm 365, Managerial Communication: Principles and Practices | 3 |
| H Adm 387, Business and Hospitality Law | 3 |
| Concentration | 6 |
| Free electives | 3-6 |
|  | 28-31 |
| Senior Year |  |
| Required courses Crader | Credits |
| Marketing Elective | 3 |
| Concentration | 6 |
| Free electives | 15-23 |
|  | 24-32 |

## GRADUATE CURRICULUM

The school's programs for advanced degrees include those of Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school's graduate catalog (available in room 172 Statler Hall); contact Professor A. Neal Geller, the school's graduate faculty representative at 255-7245, Sandra K. Boothe, director of the Master of Professional Studies program at 255-7246, or see the university's Announcement from the Graduate School.

## Required Program for Professional Master's Students

Required courses Credit
H Adm 701, Competitive Strategy for the Hospitality Industry 3
H Adm 702, Human Behavior in Organizations
H Adm 705, Management Strategy for the Hospitality Industry*
H Adm 806, Monograph II ${ }^{\circ}$
H Adm 711, Human Resources Management

H Adm 721, Financial Economics 3
H Adm 722, Hospitality Financial Management
H Adm 731, Food and Beverage
Management
H Adm 732, Restaurant Management*
H Adm 741, Marketing Management
H Adm 751, Properties Development and Planning

3
H Adm 761, Communications Modules 0
H Adm 771, Quantitative Methods
3
H Adm 772, Information Technology for Hospitality Managers

3
H Adm 793, Industry Mentorship 0
H Adm 794, Assessment and Benchmarking Master's Students
Total credits required for first-year professional master's students

0
"required only for professional master's students who matriculated before fall 1994. For details on second-year or other master's students' requirements, see the Graduate Programs catalog available in Room 172, Statler.

## Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

## MANAGEMENT OPERATIONS COURSES

H ADM $\mathbf{1 0 0}$ Principles of Management
Fall. 3 credits. Limited to non-hotel school students. Elective.

T R 10:10-11:25. P. Rainsford.
An introductory survey course in management with general reference toward the hospitality industry. The course is organized around the traditional management functions of planning, organizing, leading, and controlling. A major semester-long project will utilize a computerbased management simulation exercise.

## H ADM 102 Distinguished Management Lectures

Fall. 1 credit. Limited to hotel school students except by written permission. Elective.

## F. 1:25. D. Dittman.

A series of lectures given by non-resident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

## H ADM 105 Rooms-Division Management

Fall or spring. 3 credits. Limited to hotel school and sponsored internal transfer division students. Required.

T R 11:40-12:55. R. Chase. An introduction to the principles of rooms management beginning with an overview of the hotel industry at large. Focuses on three key stakeholders-guests, managers, and owners. Major issues of designing, marketing, and financing hotels are explored with the Comell Hotel Administration Simulation Exercise. Detailed consideration is given to components of the rooms division: front desk
operations, reservations, housekeeping, and telephone departments. Emphasis is on selling strategies, forecasting, rate efficiency, human resources, and guest relations. Students also will participate in the Statler Hotel's training activities in order to amplify the class materials with first-person and shared experiences.

## H ADM 301 Strategic Management

Fall or spring. 3 credits. Limited to 55 juniors and seniors per lecture. Prerequisites: H Adm 100 or 103 (or 105), 211, 212 (or 115).

T R 11:55-1:10; T R 11:55-1:10; T R
10:10-11:25. T. Cullen, C. Enz.
Focuses on analysis, planning, change, and implementation issues associated with strategic management, emphasizing the value of analyzing environments and formulating strategies linked to environmental conditions, building on organizational strengths, and defending against organizational weaknesses. Emphasis also on handling ambiguous facts and analysis.

## H ADM 303 Club Management

Fall or spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 103 (or H Adm 105). Elective.

M 1:25-4:25. R. James.
The study of private membership clubs and club administration. The application of current management principles in a not-forprofit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards.

H ADM 304 Rooms-Division Management Fall, second 7 weeks only. 2 credits. Open enrollment but Hotel students limited to those who matriculated before fall 1993. Does not substitute for H Adm 105. Elective.

F 1:25-4:25. R. Chase.
An introductory course concentrating on the fundamentals of rooms-division management. Areas of concentration include front-desk operations and the reservations, housekeeping, and telephone departments. Particular emphasis on selling strategies, forecasting, rate efficiencies, labor management, and guest relations.

## H ADM 305 Resort and Condominium Management

Fall. 3 credits. Not open to freshmen. Recommended: H Adm 387. Elective. T R 11:55-1:10. M. Noden. A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.
H ADM 306 Franchising in the Hospitality Industry
Spring. 2 credits. Prerequisite: H Adm 121. Elective.

M 1:25-4:25. M. Noden.

Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry

## H ADM 402 Hospitality Management Seminar

Fall. 1 credit. Limited to 30 seniors and graduate students. Students will be expected to register for H Adm 102. Elective

F 2:30. D. Dittman.
A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions
[H ADM 403 International Management
Spring. 3 credits. Limited to seniors and graduate students, juniors with permission of instructor. Prerequisites: H Adm 121, 165 , 301,321 , or graduate student status. Elective. (Formerly H Adm 503.) Not offered 1994-95.

M W 2:30-3:45. Faculty.
A survey of comparative and cross-cultural management, focusing on similarities and differences among business and management systems from different contexts. Students will examine how different management practices and philosophies develop from cultural variables such as attitudes, beliefs, value systems, and behavioral patterns. The course will emphasize Japanese managment systems.]

## H ADM 404 Entrepreneurship and Small Business Management

Fall or spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite:
H Adm 321 or equivalent. Elective
T 2:30-4:25. P. Rainsford.
Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used.
There will be one major term project, which will require the application of the course material to a field consulting project that will result in written and oral reports to the owner of the business and the Small Business Administration.

## H ADM 405 Management Planning for the Hospitality Industry

Spring. 3 credits. Limited to 25 students. Prerequisites: all required hotel undergraduate courses at the 100,200 , and 300 levels. Elective.

T R 11:55-1:10. Faculty
Focus is on how to think about quality planning and examines situations from three perspectives: the customer, the employee, and management. Designed to provide students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes. Structured as a seminar, requiring active participation in discussion of readings and case analyses.

## H ADM 406 Integrated Studies in the Hospitality Industry

Spring. 3 credits. Limited to hotel school seniors. Three Tuesday-night meetings in lieu of examinations. Elective.

T R 2:30-3:45. Faculty.
Employs text readings, participation in a simulation of a hotel organization, and guest presentations to explore business missions, objectives, strategies, action plans, and evaluations. As an integrative, summary
course, the areas of review and application will involve hotel and food service, marketing, organization, and finance.

H ADM 407 Seminar in Hotel Operations Spring. 3 credits. Limited to 30 seniors. Estimated cost of field trip, $\$ 200$. Elective.

W 12:20; F 11:15-1:10. J. Clark.
Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

## H ADM 408 Casino Management

Fall or spring. Fall, first 7 weeks only; spring, second 7 weeks only. 2 credits. Limited to 45 students. Prerequisite: H Adm 321 (concurrent registration acceptable). Estimated cost of field trip, \$175. Elective.

M 10:10-12:05. J. Lowenhar.
Objectives are to develop an understanding of casino operations within a casino hotel and to develop knowledge of the communication network between the casino and all other deparments of the hotel. A field trip to an Atlantic City casino is required.

## H ADM 409 Airline Management

Spring. 3 credits. Limited to 25 seniors and graduate students, others by permission of instructor. Prerequisites: H Adm 211 and 212 (or H Adm 211 and 115 for those who matriculated fall 1993 or after). Elective.

T 2:30; R 2:30-4:25. M. Noden.
Focuses on domestic and international airline industries and explores both pre- and postregulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINF, student teams will operate a small regional carrier.

## [H ADM 501 Creative Management for Organizational Change

Spring. 3 credits. Limited to 24 students. Elective. Not offered 1994-95.

W 2:00-4:30. Faculty
Through lectures, exercises, and group problem-solving sessions students will explore the characteristics of creative people, organizations, and processes, and obtain an inventory of their own creative ability, examine blocks to creativity and ways to overcome them, plan tactics for selling ideas, discuss methods for leading creative problemsolving meetings, and analyze strategies for producing organizational change. Organizational leaders will present problems for which students will develop creative solutions.]
H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's

## requirement.

T R 8:40-9:55. T. Cullen.
An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

## H ADM 702 Human Behavior In Organizations

Fall. 3 credits. Professional master's requirement.

M W 8:40-9:55. T. Hinkin.
An integration of theory and application, designed to increase interpersonal and managerial effectiveness. Emphasis on personality and perception, decision making, motivation, power, group process, and diversity management.

## H ADM 705 Management Strategy for the Hospitality Industry

Spring. 3 credits. Prerequisites: all required hotel school M.P.S. first-year core courses, or permission of instructor. M.P.S. requirement. T R 8:40-9:55. Includes five evening
sessions during last three weeks.
T. Cullen.

Covers strategic planning and strategy implementation. Planning focuses on defining the organization's philosophy and mission, establishing long- and short-range objectives to achieve the mission, and selecting strategy to be used in achieving objectives. Implementation focuses on developing organizational structure to achieve strategy, ensuring activities are effectively performed, and monitoring effectiveness of the strategy.

H ADM 801 Seminar In Hospitality and Service Inquiry
Fall. 3 credits. Elective. (Formerly H Adm 701)

W 2:30-5:30. C. Lundberg
This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating data. The implications and consequences of one's choices among the alternative perspectives and approaches will be emphasized.

H ADM 806 Monograph II
Fall. 3 credits. Prerequisite: H Adm 805. M.P.S. requirement.

See the M.P.S. Student Handbook for a full description of the monograph.

## HUMAN RESOURCES MANAGEMENT COURSES

H ADM 115 Organizational Behavior and Interpersonal Skills
Fall or spring. 3 credits. Limited to hotel school students, others by permission of instructor. Required.

M W 8:40-9:55; T R 8:40-9:55; T R
10:10-11:25. T. Simons, faculty.
Objective is to better prepare students for their Hotel School experience and for the workplace. Students will be exposed to theoretical material accompanied by selfassessments, experiential exercises, and group activities designed to enhance their understanding of organizations and improve their interpersonal skills. Begins with a focus on the individual and evolves into an examination of interpersonal interaction and group dynamics.

## H ADM 210 The Management of Muman

 ResourcesFall or spring. 3 credits. Limited to 100 nonhotel school students, no freshmen. Elective.

T R 1:25. Faculty.
Examines the role of human resources
management, starting with an introduction to the personnel function and an analysis of the
social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized

## H ADM 211 Human Resources

 ManagementFall or spring. 3 credits. Limited to 40 hotel school students per lecture, no freshmen or graduate students. Prerequisite: H Adm 100 or 103 (H Adm 105 for those matriculating fall 1993 or after). Required

M W 11:15, 12:20, or 1:25. M. Fulford, B. Tracey.

Provides students with an overview of the human resources management (hrm) field and shows them the link between specific hrm activities and substantive issues/situations they will face as future hospitality managers Integrates information and knowledge acquired in previous courses into the field of hrm. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students should a) understand the relationship among hrm activities, as well as the relationship between hrm and other functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.

## [H ADM 313 Training in the Hospitality Industry

Fall. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective. Not offered 1994-95

M W 2:30-3:45. Faculty.
The training function within the hospitality industry will be analyzed, and a training and development model will be presented. Learning theories, task analysis, the writing of objectives, training methods, and program evaluation will be covered at both the conceptual and experiential levels. Students will gain experience designing and implementing a training program for a hospitality organization.]

## H ADM 412 Managing Organizational Change and Productivity

Spring. 3 credits. Prerequisite: H Adm 211 or equivalent. Elective. (Formerly H Adm 512) T R 8:40-9:55. Faculty.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

## [H ADM 414 Organizational Behavior and

 Small Group ProcessesFall. 3 credits. Limited to 30 hotel school juniors, seniors, and graduate students.
Elective. Not offered 1994-95.
M 7:30- 10 p.m. Faculty
Applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experientia! labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.]

[^1]Students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers, associates and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. Space permitting, the class may be added up to the first day, but the absolute deadline for dropping the course is 3:00 p.m. on the Monday immediately preceding the class.

## [H ADM 416 Special Studies in the Management of Human Resources: Service Cultures

Spring. 3 credits. Limited to juniors, seniors and graduate students. Prerequisite: H Adm 211 or equivalent. Elective. Not offered 1994-95.

T R 10:10-11:25. Faculty.
Emphasis on diagnosis and design of human resource initiatives to achieve strong service cultures and improve organizational performance. Topics include management of emotions, monitoring and measuring corporate culture, and linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop a culture audit in a business. Class discussion, case analysis, and field experience.]

## H ADM 711 Human Resources

Management
Spring. 3 credits. Professional master's requirement.

F 9:05-12:05. Faculty.
A managerial approach to understanding organizational behavior and human resources activities. Exploration of the dilemmas and responsibilities of leadershp in complex situations.

## FINANCIAL MANAGEMENT COURSES

## H ADM 120 Survey of Financial Management

Fall or spring. 2 credits. Limited to non-hotel school students. Elective.

T 2:30-4:25. A. Arbel.
A survey of accounting principles, financial statements, and an introduction to financial analysis. Designed for the student who desires a basic general knowledge of the language of business and finance

## H ADM 121 Financial Accounting

 Spring. 3 credits. Limited to hotel school students. Required.T R 2:30-4:25. D. Ferguson. The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

## H ADM 123 Financial Accounting

 PrinciplesFall or spring. 3 credits. Limited to non-hotel school students. Elective.

Fall, T R 11:15-1:20; spring, T R 2:30-4:25. G. Potter.

An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

## HADM 125 Finance

Fall or spring. 3 credits. Limited to non-hotel school students. Elective.

Fall, M W 2:30-3:45; spring, T R
11:50-12:15. S. Carvell.
Corporate finance topics include time value of money, financial markets, interest rates, financial statement analysis and planning, working capital policy and management, risk and return, risk management, security valuation models, cost of capital, capital budgeting, capital structure, dividend policy, and creative finance.

## H ADM 221 Managerial Accounting

Fall. 3 credits. Prerequisites: H Adm 121 and 175. Required. (Formerly H Adm 227)

T R 2:30-3:20. N. Geller, G. Potter. Focuses on the managerial use of financial accounting information, including the analysis of business operations to gain a perspective on how outsiders evaluate management's performance. Also extracts, develops, and analyzes data to support managerial decision making.

## H ADM 222 Finance

Spring. 4 credits. Prerequisite: H Adm 121 or equivalent. Required. (Formerly H Adm 226)

T R 2:30-4:25. A. Arbel.
Provides students with a broad understanding of managerial finance. Develops skills in using accounting cash flow information for financial planning, capital structure decisions, capital budgeting evaluation, and short-term and long-term financial decision making Topics include current asset management, short-term financing, capital budgeting, long term financing, cost of capital, and problems in international finance

## H ADM 321 Hospitality Financial

 ManagementFall. 3 credits. Prerequisites: H Adm 121, 221 and 222, or permission of instructor. Required. (Formerly H Adm 325)

T R 8:40-9:55. J. Eyster.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision-making, equity and debt financing structures, and operating agreement forms. Students analyze hospitality operations and projects and present their findings in management report form.

## H ADM 322 Investment Management

Fall or spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective.

M W 2:30-3:45. A. Arbel
Covers institutional and analytical aspects of security analysis and investment management: securities markets, sources of investment information, risk-return analysis, bond and
stock valuation, behavior of security prices, portfolio analysis, asset allocation, and portfolio management. Covers the capital asset pricing model, generic stock investment strategy, and the screen-to-profile approach and their practical implications for security analysis and investment management. Computer-assisted analysis in which students participate in an investment game. No previous knowledge of computers is required.

## H ADM 323 Hospitality Real-Estate Finance

Spring. 3 credits. Limited to juniors and seniors, no graduate students. Prerequisite: H Adm 321, or equivalent. Elective.

M W 12:20-1:45. J. Eyster.
Focuses on real estate financing for hospital-ity-oriented projects. Topics include methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; workout strategies for distressed properties; trends in international hotel franchising; and ethical issues of real estate development. Presentations of hospitality industry real estate practitioners.

## [H ADM 324 International Financial Management

Fall. 3 credits. Prerequisites: H Adm 121, 221,222 , or equivalents, micro and macroeconomics. Elective. Not offered 1994-95.

T R 2:30-3:45. D. Ferguson.
Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.]

## H ADM 326 Corporate Finance

Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 321. Elective.

M W 11:15-1:10. S. Carvell.
In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

## [H ADM 328 Advanced Mospitality

 Managerial AccountingFall. 3 credits. Prerequisites: H Adm 121, 221, 222, and 321, or equivalents. Elective. Not offered 1994-95.

T R 10:10-11:25. D. Ferguson. Emphasis is on the use of accounting information for managerial planning, control, analysis, and evaluation. Included are the principles of managerial accounting, cost allocation, management control, models for decision making, and the special topics of joint products, transfer pricing, responsibility accounting, and performance measurement. Explores the application of managerial accounting concepts to the hospitality industry. Case studies.]

## H ADM 421 Internal Control in

 Hospitality OperationsFall. 3 credits. Limited to 30 students. Prerequisite: H Adm 321, 722, or equivalent. Elective.

T R 8:40-9:55. N. Geller.
Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

## H ADM 422 Taxation and Management

 DecisionsFall. 3 credits. Limited to 50 juniors, seniors and graduate students. Elective.

W 2:30-4:25. A. Sciarabba.
Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter " S " corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

H ADM 423 Financial Management Policy
Spring. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H Adm 326 or 721. Elective. (Formerly H Adm 523)

T R 11:55-1:10. Faculty.
The course will cover numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

## [H ADM 424 Short-Term Asset Management

Fall. 3 credits. Prerequisite: H Adm 326, 721, or equivalent. Elective. (Formerly H Adm 524) Not offered 1994-95.

M W 2:30-3:45. S. Carvell.
Examines why a significant number of hospitality firms either fail or experience suboptimal performance as a direct consequence of their inability to efficiently manage working capital accounts. Topics include collection and disbursement systems, shortterm investments, accounts receivable and inventory management, liquidity, cash management, and hedging interest rate and currency exchange risk. Various quantitative techniques are applied to these topics.]

## H ADM 621 Hospitality Real Estate

 FinanceSpring. 3 credits. Limited to graduate students. Prerequisite: H Adm 725, or equivalent. Elective. (Formerly H Adm 721)

M W 12:20-1:45. J. Eyster.
Focuses on real estate financing for hospital-ity-oriented projects. Topics include methods of measuring rates of return, feasibility and appraisal processes, equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages, forms of operating agreements, workout strategies for distressed properties, trends in international hotel financing, and ethical issues of real estate development. Presentations of hospitality industry real estate practitioners will tie course material to current
industry practices. This graduate section includes the H Adm 323 lectures plus an hourlong discussion session each week featuring guest speakers from industry, faculty from other colleges, and case studies.

## H ADM 624 Analysis and Interpretation

 of Financial StatementsSpring. 3 credits. Limited to seniors and M.P.S. students. Elective. (Formerly H Adm 724)

T R 10:10-11:25. G. Potter.
Covers the financial accounting issues that are encountered in reporting the results of operations for corporate enterprises. Accounting principles and future extensions are discussed. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. Emphasis is on both outsiders' views of the company and decision making through interpretation of financial statements.

## H ADM 721 Financial Economics

Fall. 3 credits. Professional master's requirement.

T R 10:10-11:25. L. Canina.
Integrates corporate finance with the framework of value minimization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

## M ADM 722 Hospitality Financial

 ManagementSpring. 3 credits. Professional master's requirement.

T R 8:40-9:55. N. Geller.
Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

## FOOD AND BEVERAGE MANAGEMENT COURSES

## H ADM 136 Food and Beverage

 ManagementFall or spring. 4 credits. Limited to hotel school students. Required.

M W 1:25-3:20. G. Norkus. An introduction to the principles of food and beverage management, beginning with an overview of the food service indlustry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

H ADM 230 Introduction to Culinary Arts Fall or spring. 2 credits. Limited to non-hotel school students only. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for fall is September

19; spring drop deadline is February 3. Elective.

T 1:25-5:25; T 6:30-10:30 p.m.; W 6:30-
10:30 p.m.; R 6:30-10:30 p.m.; F 1:25-5:25.
T. Neuhaus, B. Lang, A. Nash, J. Ridley

Studies of food groups, their respective methods of preparation, cooking, presenta tion, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

## [H ADM 234 Food and Beverage Control

Fall. 2 credits. Limited to 24 students.
Prerequisite: H Adm 136. Elective. Not offered 1994-95

> R 12:20-2:20. Faculty.

Studies the food and beverage operation from the position of both the food and beverage controller and the food and beverage analyst. Control systems and analytical techniques are studied and applied to operational situations.]

H ADM 236 Culinary Theory and Practice Fall or spring. 4 credits. Prerequisite: H Adm 136. Required.

M F 8:40-9:55. T. O'Connor, B. Richmond, S. Gould.

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to troubleshoot them.

H ADM 237 Seminar in Cultural Cuisines Fall. 3 credits. Limited to 20 students. Prerequisites: H Adm 165 and 236, or permission of instructor. Elective. (Formerly H Adm 437)

T 1:25-3:20. T. O'Connor
Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

## H ADM 330 Seminar in Chain-Restaurant

 OperationsSpring. 3 credits. Prerequisite: H Adm 136, or permission of instructor. Elective. (Formerly H Adm 532).

T R 10:10-11:40. C. Muller, G. Norkus Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings out unique challenges, opportunities, and strategic orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case study analyses, company research, and a term project.

## H ADM 331 Food Service Distribution Management

Fall. 3 credits. Limited to 24 juniors, seniors, and graduate students; others by permission of instructor. Elective.

R 1:25-4:25. G. Norkus, E. Merberg. Designed to acquaint the student with the food service distribution industry. Analyzes the history and origins of food service distribution, the distributor's role in supporting the operations of the restaurant industry, and the specific disciplines of food service distribution

## H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience

Spring. 3 credits. Field trip $\$ 200$. Limited to 20 students. Prerequisites: H Adm 165 and 335 , or permission of the instructors. Elective. (Formerly H Adm 531)

M 12:20-2:15. J. Lumley, B. Lang
Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/ reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

## H ADM 333 Current Issues in Food Safety and Sanitation

Spring. 2 credits. Elective. (Formerly H Adm 533)

W 12:20-2:15. B. Richmond. A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NIFI/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

## H ADM 334 Gastronomy: Wine and Food

 Pairing Principles and Promotion Spring. 2 credits. Limited to 20 seniors and graduate students. Prerequisite: H Adm 436 Elective. (Formerly H Adm 538)M 1:25-3:20. B. Lang.
Focuses on the pairing and creative marketing of wine and food. Students study and taste regional, varietal wines with various foods to understand wine and food pairing. Topics include wine and social issues, wine list development, special event promotion, onpremise merchandising, and training of staff. Wine and food tastings presented to industry guests.

## H ADM 335 Restaurant Management

 Fall or spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, $\$ 60$. Once enrolled, students may not drop the course without permission of instructor. Required.F 11:15-1:10. C. Muller, G. Pezzotti,
R. White, B. Lang, B. Halloran.

A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate labor supplies, identifying
target markets, and planning for organization growth. The laboratory is based on a handson managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant

## [H ADM 336 Principles of Nutrition

Fall. 3 credits. Prerequisites: H Adm 136 and 236 and corequisite, H Adm 337, or permission of instructor. Field trip, $\$ 40$. Elective. Not offered 1994-95.

T R 9:05. Faculty.
Designed especially for students interested in planning menus to meet the nutritional needs of the dining public. Students learn how to market healthful foods and study computer nutrient data bases, nutrition labeling, truth in menus, special diets, fad diets, and the current and future nutritional needs of the population. Discussions include how to counteract the public's misconceptions and myths. Labora tory sessions emphasize creative production of high-quality, nutritious, safe food.]

## HADM 337 Specialty Foods

Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites for hotel students: H Adm 136 and 236. Elective.

T R 10:10-11:30. T. Neuhaus.
An advanced course covering finer points of cooking and baking. A culinary, chemical, and marketing perspective will be taken using principles of organoleptical food evaluation. Topics include flavor marriages, gamishes, unusual vegetables and fruits, marinades, charcuterie, wild game, fermentations, and chocolates.

## H ADM 338 Health and Fitness in the Resort Hotel and Spa Industry

Fall. 3 credits. Limited to 20 students per section. Field trip, $\$ 40$. A previous course in nutrition or food science is helpful but not required. Elective.

M W 11:15. B. Richmond.
Especially for students who are interested in the fitness and nutrition trend in restaurants, resorts, and hotels. Nutritious menu design and the design of fitness programs, equipment, and facilities will be emphasized. Topics include personnel required, assessing personal fitness levels, and legal, medical, managerial implications, and integration of nutritious menu items into restaurant menus and their marketing and merchandising. Guest speakers from various spas, wellness centers, and fitness centers.

## IH ADM 339 Airline Food Service Management

Spring. 3 credits. Field trip, \$50. Prerequisites/Corequisites: H Adm 136, 236, or permission of the instructor. Elective. Not offered 1994-95.

M W 7-8:15 p.m. Faculty. Airline food service, unique in the food and beverage industry, involves a thorough knowledge of the airline industry and depends on the state of the economy, the financial success of the airline industry, and economies of scale. Students study the planning of airline meals, their production by vendors, their distribution by specialized companies, and their assembly and delivery by caterers. A field trip to an airline's hub city enables students to visit flight kitchens, vendors, airline representatives and distributors. Guest speakers representing various sectors of the industry (airline food and beverage managers, airline marketing personnel, entrepreneurs who provide goods
and services, and in-flight catering executives) are included.]

## H ADM 430 Introduction to Wines

Fall or spring. 2 credits. Wine glass kit and course fee, $\$ 25.00$. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes. S-U grades only Elective.

W 2:30-4:25. S. Mutkoski, A. Nash. An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.
(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school.
Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 9 in the fall and February 3 in the spring.)

## H ADM 431 Seminar in Independent

Restaurant Operations Management
Fall or spring. 3 credits. Five field trips, $\$ 250$ Limited to 20 students. Prerequisite: written permission of instructor. Flective.

T 2:30-4:25. G. Pezzotti.
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant's concept (market), organization, ownership, management, physical structure, staff, frontand back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

## [H ADM 432 Seminar On Specialty Beers

 Fall. 3 credits. Field trips, \$50. Elective. Not offered 1994-95.M 1:25-3:20 (first seven weeks only). Faculty.
Designed for upper-level students who intend to pursue food and beverage careers. Advances knowledge about beers and other malt beverages in terms of managing such products in a restaurant setting or other food service outlet. Topics include the brewing process, sensory aspects of beer and other malt beverages, international beer types and styles, marketing malt products, purchasing and distribution, storage and service, beer and food pairings, staff training and education, cost controls, and third-party liability issues.]

## H ADM 433 Food Service Management in Business, Industry, and Health Care Facilities

Spring. 3 credits. Field trips, \$100. Limited to 25 students. Prerequisites: H Adm 136 and 236. Elective.

M 10:10; W 10:10-12:05. T. O'Connor.

Designed to explore and analyze food service management in business, industry, and healthcare facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food service organization structures, job descriptions, controls, systems design, equipment, and government/legal regulations. Readings, small investigative projects, discussions, local site visits, and one field trip to a metropolitan area.
H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students with permission of instructor. Prerequisite: H Adm 236,230 , or, for graduate students, "culinary camp." Elective.

R 9:05. T. Neuhaus.
A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

## H ADM 435 Selection, Procurement, and Supply Management

Fall. 3 credits. Prerequisite: H Adm 136 or 731. Elective.

T 10:10-12:05. R. Spies. Expands upon the concepts of purchasing and supply management that were developed in H ADM 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include discussions on the comparison of the purchasing function in the hospitality industry to other industries, distribution systems, legal and ethical implications in buyer-seller relationships, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entree food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.
H ADM 436 Beverage Management
Fall or spring. 2 credits. Limited to 30 hotel school juniors, seniors, and graduate students. Prerequisite: H Adm 430 (co-registration is not allowed). Elective.

W 10:10-12:05. S. Mutkoski, A. Nash. Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.

## H ADM 437 Specialty Food and Beverage Operations: Guest Chefs Spring. 3 credits. Limited to 20 students.

 Prerequisite: H Adm 335 or 732 . Elective.R 1:25-4:25. B. Halloran, B. Lang,
H. Winslow.

Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative
to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

## H ADM 438 Catering Management

Spring. 2 credits. Limited to 20 students. Prerequisite: H Adm 335, 732, or permission of instructor. Elective.

T 12:20-2:15. R. Spies.
Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis.

## M ADM 439 Wine: A Cultural and Historical Perspective <br> Fall or spring. 2 credits. Limited to 200

 students.M 2:30-4:25. A. Nash.
Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific wine-producing regions of the world, current wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.
[H ADM 536 Contemporary Health Foods: A Food Service Practicum in SpaStyle Cuisine
Fall. 3 credits. Limited to 20 seniors and graduate students, or by permission of instructors. Elective. Not offered 1994-95.

W 12:20. Faculty.
Builds an awareness and understanding of today's health-conscious food service consumer. Topics include marketing, menu design and implementation, and hands-on experience in carrying out a nutritionally aware or "spa-designed" food concept.]

## H ADN 731 Graduate Food and Beverage

 ManagementFall. 3 credits. Professional master's requirement.

T R 10:10-11:25. T. Kelly.
Managerial and operational principles and techniques of planning, operating, and evaluating a food and beverage operation.

## H ADM 732 Graduate Restaurant

## Management

Fall. 3 credits. Limited to 30 students. Prerequisite: H Adm 731. M.P.S. requirement. W 12:20-2:15. Production Lab: F 2:30closing. R. Spies, R. White. A food and beverage management course in which the class operates a Statler restaurant. The production lab allows students to rotate through the various line positions of a restaurant operation. In turn, each student serves as the manager with responsibilities for menu planning, marketing, pricing, scheduling, guest relations, and profitability. In-depth analysis of the operation and discussion of restaurant issues.

## MARKETING AND TOURISM

## H ADM 240 Marketing Principles

Fall or spring. Limited to non-hotel school students.

T R 2:30-3:45. R. Bell.
An introductory course providing a basic understanding of consumer purchase decision making, product planning, distribution, promotion, and pricing. Companies and their current marketing strategies will be examined to better understand these fundamental tenets of marketing and how they contribute to the crucial process of strategic planning.

## H ADM 241 Marketing Principles

Fall or spring. 4 credits. Limited to non-hotel school students. Elective.

T R 2:30-3:45. R. Bell.
Introductory course providing a basic understanding of consumer purchase decision making, product planning, distribution, promotion, and pricing. Actual companies and their current marketing strategies will be examined to better understand these fundamental tenets of marketing and how they contribute to the crucial process of strategic planning.

## H ADM 243 Principles of Marketing

Fall or spring. 3 credits. Limited to 60 hotel school students per lecture, not open to freshmen. Required.

M W 2:30-3:45; T R 10:10-11:25.
W. Kaven, L. Renaghan

Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, the external operating environment, and how the special nature of services affects the development of marketing strategies in the hospitality industry.

## H ADM 244 Tourism I

Fall. 3 credits. Not open to freshmen. Elective.

T R 10:10-11:25. M. Noden.
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale.
The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

## H ADM 245 The Basics of Hotel Sales

Spring. 3 credits. Field trip, $\$ 50$. Limited to 30 students. Prerequsite: H Adm 240/241/ 243,741 , or equivalent. Elective.

## F 1:25-5. R. Bell.

Emphasis on skills and knowledge leading to an understanding of the role of successful property level sales person. Topics include roles of types of sales positions at the hotel level, tools necessary to make it up the ladder, operation of a hotel sales function, and differing buying strategies of market segments.

## H ADM 343 Marketing Communications

Spring. 3 credits. Prerequisites: principles of marketing or marketing management and quantitative methods for business management courses. Elective. (Formerly H Adm 543)

M W 10:10-11:25. M. Morgan.

Covers formulating a research question, determining research design, designing data collection methods and forms, designing samples and collecting data, analyzing and interpreting the data, and reporting research results.

## H ADM 346 Marketing Planning for Hotels

Fall. 3 credits. Prerequisite: H Adm 243, 741, or equivalent. Elective. (Formerly H Adm 546)

T R 11:55-1:10. R. Bell.
Key variables in property level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies and measurement of results. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

## H ADM 347 Consumer Behavior

Fall. 3 credits. Limited to undergraduate students. Prerequisite: a principles of marketing or marketing management course. Elective. (Formerly H Adm 547)

M W 10:10-11:25. M. Morgan.
Introduces students to the dynamic interactions among affect and cognitions, behaviors, and environmental events that are involved in market exchanges. Covers information processing, behavior management, and market segmentation and positioning as well as using the consumer hehavior concepts and principles in the development of marketing strategy.

H ADM 349 Seminar in Selected Cases in Hospitality Marketing
Spring. 3 credits. Limited to seniors, or permission of instructor. Prerequisite: A principles of marketing course. Elective.

T R 11:55-1:10. Faculty.
An integrative course that provides senior marketing students and others an opportunity to translate concepts learned from a variety of marketing courses into sound management decisions.

## H ADM 442 Marketing Communications

Spring. 3 credits. Limited to seniors and graduate students. Prerequisite: a previous marketing course. Elective. (Formerly H Adm 542)

M 1:25-4; W 1:25. C. Dev.
Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, direct marketing and out-of-home. Hospitality industry emphasized.

## H ADM 444 Tourism II

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 243 and 244, or equivalents, or written
permission of instructor. Elective.
T R 11:55-1:10. M. Noden.
An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions are examined and analyzed. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

## H ADM 445 Services Marketing

Fall or spring. 3 credits. Limited to undergraduate students. Prerequisite: a previous marketing course or permission of instructor. Elective. (Formerly H Adm 544) Not offered spring 1995.

M W 11:55-1:10. L. Renaghan. Students preparing for ownership or management positions will develop an understanding of services marketing principles applicable across entire service sector. Topics include marketing strategies of service firms, new marketing approaches, and the reformulation of traditional marketing principles from consumers and industrial goods marketing. Four case studies, guest speakers. Emphasis on hospitality industry in fall.

## H ADM 449 International Marketing

Fall. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics. Elective.

T R 2:30-3:45. W. Kaven. Develops understanding of international marketing with emphasis on hospitalityindustry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

## H ADM 641 Marketing Decision Support for Service Firms

Spring. 3 credits. Limited to graduate students, others by permission of instructor. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for business management.

M W 8:40-9:55. M. Morgan. Covers a variety of tools and models for improving decision effectiveness in the marketing of services. These tools and models are drawn from the fields of consumer behavior, behavioral decision theory, economics, management science/operations research, and statistics/econometrics. Covers pricing hotel rooms, restaurant design, advertising and frequency programs, location selection, sales agent management, and competitive segmentation/positioning strategies for hotel brands.

## H ADM 642 Strategic Marketing

Fall. 3 credits. Limited to graduate students. Prerequisite; a marketing course, or permission of instructor. Elective.

W 7:30-10:15 p.m. C. Dev.
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

## H ADM 643 Marketing Research

Spring. 3 credits. Limited to graduate students. Prerequisites: principles of marketing or marketing management and quantitative methods for business management courses. Elective.

M W 10:10-11:25. M. Morgan.
Covers formulating a research question, determining research design, designing data collection methods and forms, designing samples and collecting data, analyzing and interpreting the data and reporting research results. This graduate section includes the H Adm 343 lectures plus a group case study/ research project with additional readings and seven one-hour lab sessions.

## HADM 645 Services Marketing

Fall or spring. 3 credits. Emphasis on hospitality industry in fall. Limited to graduate students. Prerequisite: a marketing course, or permission of instructor. Elective. Not offered spring 1995.

M W 11:55-1:10. L. Renaghan.
Helps students preparing for ownership or management positions to develop an understanding of services marketing principles applicable across the entire service sector Marketing strategies of service firms from various service industries (hotels, banking, restaurants, health care, travel agencies, consulting, and airlines) will be evaluated. New marketing approaches and reformulation of traditional marketing principles are considered. Case discussions, guest speakers.

## H ADM 646 Marketing Planning For Hotels

Fall. 3 credits. Limited to graduate students. Prerequisite: H Adm 243, 741, or equivalent Elective.

## T R 11:55-1:10. R. Bell

Key variables in property-level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies, and measurement of results. Upon completion, student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property. Text material, cases, relevant articles, lectures, and key speakers. Theoretical paper

## H ADM 647 Consumer Behavior

Fall. 3 credits. Limited to graduate students. Prerequisite: a principles of marketing or marketing management course. Elective.

M W 10:10-11:25. M. Morgan.
Introduces students to the dynamic interactions among affect and cognitions, behaviors, and environmental events that are involved in market exchanges. Covers information processing, behavior management, and market segmentation and positioning as well as using the consumer behavior concepts and principles in the development of marketing strategy. This graduate section includes the $\mathbf{H}$ Adm 347 lectures plus a group case study/ research project that involves additional readings and seven one-hour lab sessions.

## H ADM 741 Marketing Management

 Spring. 3 credits. Limited to first-year hotel school M.P.S. students. M.P.S. requirement.T R 2:30-3:45. C. Dev.
Basic concepts and principles underlying marketing decision making and the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs

## PROPERTIES MANAGEMENT COURSES

## H ADM 255 Hotel Development and Planning

Spring. 3 credits. Limited to sophomores juniors, and seniors. Required

M W F 10:10. J. deRoos
An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space
planning; architectural design, engineering, and construction criteria; and the interpretation of architectural and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework

H ADM 350 Real Estate Management Fall. 3 credits. Elective.

M 1:25-3:20; W 1:25-2:15. J. deRoos. Designed for students interested in the management of residential and commercial real estate. Overview of real estate economics, the relevant law, and different aspects of property management including leases and management contracts, accounting and finance, staffing, and building operations. Examples from several types of properties.
H ADM 351 Mospitality Facilities Design Fall. 3 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective. M9:05. S. Robson. A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of restaurant and hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

## H ADM 352 Hotel Planning and Interior Design

Spring. 3 credits. Field trip, $\$ 200$; drawing supplies, $\$ 75$. Limited to 20 students. Prerequisite: H Adm 351. Elective F 1:25. R. Penner.
A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.

## H ADM 353 Food Service Facilities

 DesignSpring. Variable, to 4 credits. Limited to 15 students. Prerequisites: H Adm 351 and 335 (coregistration is acceptable). Elective.

M W 1:25. S. Robson.
An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.
H ADM 354 Computer-Aided Design Fall or spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H Adm 351 or equivalent studio experience. Elective. T 11:15-1:10; W 11:15-1:10. S. Robson. The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

## H ADM 355 Mospitality Facilities Operations

Fall. 3 credits. Prerequisite: H Adm 255. Required.

M W F 10:10; M W F 1:25. D. Stipanuk. An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

## H ADM 356 Hospitality Risk Management

 Spring. 3 credits. Elective.T R 11:55-1:10. D. Stipanuk.
Risk management within the hospitality environment as applied to issues of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA and Right-to-Know requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.

## H ADM 357 Insurance and Risk Management

Fall or spring. 3 credits. Limited to 75 students per lecture. Prerequisite: an introductory accounting or business course. Elective.

M 7:30-10 pm; W 7:30-10 pm. J. Ferris. A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and noninsurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

## H ADM 450 Principles of Real Estate

Fall. 3 credits. Limited to juniors and seniors (graduate students must enroll in H Adm 651). Elective.

T R 2:30-3:45. J. Corgel, J. deRoos. Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

## [H ADM 455 Special Topics in Properties Management

Fall or spring. Variable, to 3 credits. Limited to juniors, seniors and graduate students. Elective. Not offered 1994-95.

Hours to be arranged. Faculty
The theme and instructor of the "special topics" course will change each year on the basis of current trends, student interest, and faculty expertise. See the school registrar or properties area coordinator for details about the current topics.]

## H ADM 456 Hospitality Facilitios

## Management

Spring. 3 credits. Prerequisite: H Adm 355, 751 , or permission of the instructor. Elective.

T R 8:40-9:55. D. Stipanuk.
Examines building engineering systems and the management of physical facilities in the hospitality industry, including the organization of the maintenance and engineering functions. Includes visits to other campus buildings to survey their engineering systems.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Limited to seniors and graduate students. Elective. Not offered 1994-95.

M W 2:30-3:45. D. Stipanuk.
Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.]

H ADM 458 Hospitality Real Estate Spring. 3 credits. Prerequisite: H Adm 323, 450 , or permission of instructor. Elective.

T R 10:10-11:25. J. deRoos.
Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income of hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, gain working knowledge of valuation approaches, and be aware of contemporary hospitality valuation issues.

## H ADM 459 International Development

Fall. 3 credits. Limited to seniors and graduate students. Elective

M 12:20-2:15; W 12:20. J. Clark.
Seminar covering the strategic development of international hospitality projects. Topics include corporate expansion strategies, the international development process, viewpoints of public and private stakeholders; technology, infrastructure, environmental concems, and public policy issues. Guest lecturers

## H ADM 651 Principles of Real Estate

Fall. 3 credits. Limited to graduate students. Elective

T R 2:30-3:45. J. Corgel.
This survey course approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, use real estate resources wisely, understand public policy issues, and be prepared for additional courses in real estate investment, finance, and development.

This graduate section includes the H Adm 450 lectures, plus an hour-long recitation each week which features guest speakers from industry, faculty from other colleges, and case studies. Comprehensive term project.
H ADM 658 Adyanced Real Estate
Spring. 3 credits. Prerequisite: H Adm 323, 450 or 651 . Elective.

T R 2:30-3:45. J. Corgel.
Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the
techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and non-residential real estate are analyzed; however, special emphasis is placed on the analysis of hospitality properties.

H ADM 751 Project Development and Planning
Fall. 3 credits. M.P.S. requirement. M W 8:40-9:55. R. Penner
The major elements of physical assetdevelopment. Topics include the role of the real estate asset in the hospitality firm, the development process, and hotel planning and design.

## COMMUNICATION COURSES

## H ADM 165 Managerial Communication I

Fall or spring. 3 credits. Each lecture limited to 18 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. Required.

Lec 1, M W F 9:05; lec 2, M W F 9:05; lec 3 , M W F 10:10; lec 4, M W F 10:10; lec 5, M W F 11:15; lec 6, M W F 1:25; lec 7 M W F 2:30; lec 8 T R 8:25-9:55. D. Jameson, N. Katz, S. Kiner, J. Lumley, and B. Stevens.
An introduction to written communication within a business context. Students learn how to conceive, plan, and develop those written materials that provide much of the information that people in business need to form judgments and make decisions. Focusing on the specific principles, needs, and responsibilities of business communication, the course introduces students to the writing process: analyzing, organizing, using research sources, developing substance, and writing in a clear, precise style. Students write a variety of reports requiring different analytical approaches.

H ADM 266 Intermediate French: Le Francais de l'Hotellerie et du Tourisme
Spring. 3 credits. Limited to 15 students Prerequisite: French 123 or equivalent (CPT 560 or above), or permission of instructor. Elective.

## M W F 12:20; one hour TBA. <br> A. Grandjean-Levy

Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general comperence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.
H ADM 364 Advanced Business Writing
Fall or spring. 3 credits. Limited to 20 juniors, seniors, or graduate students, or written permission of instructor. Prerequisite for undergraduates: H Adm 165 (for hotel school students) or completion of student's freshman writing requirement. Elective.

W 12:20-2:15. D. Jameson, N. Katz.
Focuses on the written communications that require special persuasiveness and control of
tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for which students prepare résumes, letters of application, and follow-up messages adapted to their individual needs.
H ADM 365 Managerial Communication II Fall or spring. 3 credits. Limited to 24 juniors and seniors per lecture, or written permission of instructor. Note: Students required to take this course generally may not drop it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. Prerequisites: Hotel undergraduates must have completed H Adm 165 and H Adm 115 or 212. Required.

Lec 1, T R 10:10-11:40; lec 2, T R 10:1011:40; lec 3, T R 10:10-11:40; lec 4, T R 12:20-1:50; lec 5, T R 12:20-1:50.
E. Huettman, S. Kiner, and B. Stevens. A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

## H ADM 462 Communication and the Multicultural Organization

Fall. 3 credits. Elective.
W 7:30-10 p.m. E. Huettman Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business.

## H ADM 463 Persuasive Communication in Organizations

Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 165 and 365 for hotel school undergraduates, or permission of instructor. Elective.

W 7:30-10 p.m. E. Huettman Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

## [H ADM 661 Organizational

Communication For Managers
Spring. 3 credits. Elective. Not offered 1994-95.

T R 8:40-9:55. Faculty
Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers must accomplish to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to write, make oral presentations, and interact effectively with others in mangerial contexts.]

## H ADM 761 Communications Modules

Year long. No credits. Professional master's requirement.
Modules based upon those skills identified as most valuable to students or those competencies that were targeted in the individual assessment sessions.

## OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 170 Keyboarding on the Macintosh
Spring. 2 credits. Elective. M W F 12:20. B. David.
An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word-processing skills during the second half of the course

## HADM 174 Microcomputing

Fall. 3 credits. Limited to hotel school freshmen. Spring and summer. 3 credits. Open enrollment. Maximum of 30 students per lecture. Required.

Lec 1, M W F 9:05; lec 2, M W F 10:10; lec 3, M W F 11:15; lec 4, M W F 12:20; lec 5, M W R $1: 25$; lec $6, \mathrm{M}$ W R $2: 30$; lec 7 , M W R 3:35. R. Alvarez, B. David, R. Moore. An introduction to microcomputing to develop functional computer fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely laboriented and students work primarily on Macintosh personal computers with secondary drill work on IBM personal computers

## H ADM 175 Quantitative Methods

Fall or spring. 3 credits. Hotel school transfers must take course in the fall, Hotel freshmen in the spring. Prerequisite: H Adm 174. Required.

T R 8:40-9:55; T R 11:55-1:10. R. Morey. An introduction to statistical and operations management methods appropriate to the hospitality industry. Topics include descriptive statistics, probability, correlation and regression, forecasting, decision analysis, quality control charts, and an introduction to yield management. Emphasis is on practical applications of the techniques to hospitality related problems.

## H ADM 374 End-User Business

 Computing ToolsFall or spring. 3 credits. Limited to 20 students per lecture. Elective.

M W F 10:10. R. Alvarez.
Explores the personal computer as a managerial tool for the hospitality industry Concepts of modeling, database, and end-user
computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on the IBM PS2.

## H ADM 375 Hotel Computing Applications

Spring. 3 credits. Limited to 20 students. Prerequisite: H Adm 174. Elective

T R 11:15. R. Moore.
An introduction to transaction processing systems as they currently are used in the hospitality industry. Specific topics include property management systems, reservation systems, communication networks, database structures, point-of-sale systems, methods of system selection, and cost justification. Laboratories provide hands-on experience with systems widely used in the hospitality industry and help to develop IBM PC/DOS skills.

## H ADM 474 Corporate Information

 Systems ManagementSpring. 3 credits. Limited to juniors, seniors, and graduate students who have not taken H Adm 774.

T R 9:05-10:20. R. Alvarez.
Explores ten key issues in information technology management through use of case studies of companies with relevant experience with the issues. A basic understanding of information technology, organizational
behavior, and general management is advised

## H ADM 572 Executive Information Systems

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H Adm 174. Flective.

M W 11:15-12:05. R. Moore.
Students learn to use tools to integrate data from hotel transaction processing systems and build models that form the basis of decision support systems and executive information systems. Local area networks, E-mail systems, database and presentation software are introduced. Software applications are used to access networks, query distributed databases, and build numerical and graphical models. All work is on IBM PS/2's using Excel, Paradox, Forest \& Trees, and Pilot software.

## H ADM 674 Service Operations

Management
Fall. 3 credits. Limited to 25 graduate students. Prerequisite: H Adm 775 or equivalent. Elective. (Formerly H Adm 574)

T R 11:55-1:10. M. Davis.
The objective of this course is to improve the understanding of the operations function of service organizations. The course focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management

## H ADM 771 Graduate Quantitative Methods

Spring. 3 credits. Professional master's requirement.

T R 2:30-3:45. M. Davis.
Explores the framework for decision making, descriptive statistics, probability, forecasting, decision analysis, and optimization.

H ADM 772 Information Technology for Hospitality Managers
Spring. 3 credits. M.P.S. Requirement M W F 10:10. R. Moore.
Familiarizes students with issues surrounding the use of information technology in
supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

## LAW COURSES

H ADM 385 Business Law I
Spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Elective.

M W 11:15. J. Sherry
Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities

## H ADM 387 Business and Hospitality

 LawFall or spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. M W 9:05. J. Sherry.
An integrated, chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

## H ADM 487 Real Estate Law

Fall and summer. 3 credits. Recommended: completion of H Adm 387 or equivalent. Elective.

M W 2:30-3:45. J. Sherry
Familiarizes students with the nature and ownership of real estate. Describes interests in real estate and how title is transferred. Acquaints students with legal aspects of marketing residential and commercial real estate, including shopping center and commercial leases, real estate syndication, and subdividing real estate for development.

## H ADM 681 The Interplay of Law and Ethics in Service Industry

 ManagementSpring. 3 credits. Limited to 50 hotel graduate students; seniors and other graduate students by permission of instructor. Prerequisites: completion of all required hotel school M.P.S. core courses, or permission of instructor. (Formerly H Adm 781)

To be arranged. J. Sherry. Involves students in ethical aspects of traditional law problems confronting service industry managers and executives within the areas of commerce, consumerism, administrative law and practice, regulation of anticompetitive marketing activities, and federal securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

## OTHER COURSES

## H ADM 191 Microeconomics for the Service Industries

Fall or spring. 3 credits. Limited to 60 hotel school students per lecture, others by permission of instructor. Required.

T R 8:40-9:55; T R 10:10-11:25.
P. DeGraba.

Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry

## H ADM 490 Housing and Feeding the Homeless

Fall and spring. Variable to 4 credits. Limited to juniors and seniors. Elective.

T R 11:55-1:10. A. Hales.
Explores the public and private sector partnership in addressing the crisis of homelessness. Through lectures, class discussions, research, volunteerism, and a field placement practicum, students will explore the economic, social, and political issues of our country's growing concern with housing and feeding homeless people Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs and food assistance programs will be analyzed.

Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, its opportunities and constraints, identify a specific managerial challenge, and formulate an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester
Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency twelve hours during the semester.

## H ADM 491 Hotel Ezra Cornell

Fall or spring. Variable credit (maximum, 3). Prerequisite: written permission. Elective. (Formerly H Adm 603)
G. Pezzotti.

Elected board members of Hotel Ezra Cornell may receive credit for developing, organizing, and managing the April "hotel-for-a-weekend" event.

## H ADM 493 Management Intern Program I-Operations

Fall or spring. 6 credits. Open to hotel school juniors and seniors with approval of the MIP faculty committee. Prerequisites Students are expected to have completed H Adm 103 (or 105), 121, 136, 165, 174, 211, 212 (or 115), 121, 226 (or 222), 227 (or 221), 236,243 , and 255 . In addition, completion of the following courses is strongly recommended: H Adm 303 (or 301), 325 (or 321), 335,355 , and 365 . Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H Adm 494. S-U grades
only, based on six performance evaluations. Elective. (Formerly H Adm 601)

## R. Chase

## H ADM 494 Management Intern Program

 II-AcademicFall or spring. 6 credits. Must be taken in conjunction with H Adm 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. Elective. (Formerly H Adm 602) R. Chase

## [H ADM 495 Development and

 Management of Wellness in Business OrganizationsSpring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $\$ 25-50$.
Elective. (Formerly H Adm 599) Not offered 1994-95.

T R 8:40-9:55. M. Tabacchi.
Designed to encourage future business leaders to develop and work with a healthy work force. The effect of an unhealthy work force on productivity and profitability will be studied. Business practices, corporate policies, personnel policies, and stressors in the workplace are discussed.]

## H ADM 499 Undergraduate Independent

 StudyFall or spring. Credit to be arranged.
Elective. (Formerly H Adm 600-690)
Students are afforded an opportunity to pursue independent study projects under the direction of a faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

## H ADM 692 Industry Challenges and Trends

Fall. 3 credits. Limited to 15 seniors (by permission only) and graduate students. Elective.

T R 11:55-1:10. J. Clark.
A highly participative class structure will use the most current readings and case studies to discuss and analyze the future challenges and trends of the hospitality industry. Topics such as globalization, consolidation, segmentation, technology, are examples, but actual topics will be determined each term based on their perceived future importance as well as class interest.

## H ADM 699 Graduate Independent Research

Fall or spring. Credit to be arranged.
Elective. (Formerly H Adm 700-790)
Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

## H ADM 793 Industry Mentor Program

Wintersession. No credits. S-U grades only. Professional master's requirement.
Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an
awareness of the skills, level of integration, and other factors required for success.

## H ADM 794 Assessment and Benchmarking for Master's Students

 Fall or spring. No credits. S-U grades only. Professional master's requirement. Individualized approach to determine and actualize management development skills and to match their strengths with the appropriate hospitality industry position. Key component is an initial two-day assessment period during which students participate in a variety of activities that will provide information on the extent to which they meet performance standards in such things as group skills, leadership skills, and communication abilities Assessment and benchmarking will continue throughout the two-year master's program.H ADM 890 M.S. Thesis Research
Fall or spring. Credit to be arranged.
H ADM 990 Ph.D. Thesis Research
Fall or spring. Credit to be arranged.

## COLLEGE OF HUMAN ECOLOGY

## ADMINISTRATION

Francille M. Firebaugh, dean
Charles McClintock, associate dean
Lucinda A. Noble, associate dean; director of Cornell Cooperative Extension
Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension

Christine Olson, assistant dean; assistant director, Comell University Agricultural Experiment Station
Brenda Bricker, director, admissions
Mary Rhodes, college registrar and director, student services

## FACILITIES

The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, and human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and a computer-aided design laboratory; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatogra-
phy, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

## DIVISION OF STUDENT SERVICES

Brenda Bricker, director, Office of Admissions
Mary Rhodes, college registrar and director Office of Student Services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department
Matriculated students can find assistance with matters of academic credit, graduation requirements, academic advising, career planning and placement, and personal counseling from the Office of Student Services, N101 Martha Van Rensselaer Hall International students should contact their student counselor in the Office of Student Services.

## The Students

The College of Human Ecology undergraduate enrollment is 1,300 with 57 percent in the upper division. About 351 students are graduated each year, and last year 251 freshmen and 102 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective.

Approximately 72 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Twenty-five percent were identified as members of minority groups in 1993.

Approximately 218 graduate students have members of the college's faculty chairing their special committees. The college awarded 64 master's degrees and 19 doctorates last year.

## ACADEMIC PROGRAMS

## Majors

Selection of a major begins with selection of career goals. In their freshman and sophomore years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The counselor for career development in the Office of Student Services (N101 Martha Van Rensselaer Hall), and resources in the Student Resource Center (N139 MVR) can help students through their career exploration process.
Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.
Consumer Economics and Housing (CEH): The department supervises the department major and the policy analysis major.

Design and Environmental Analysis (DEA): Interior design, facility planning and management, human environment relations.

## Human Development and Family Studies

 (HDFS): Does not have separate options. Courses focus on cognitive, social, and personality development; phases of development; and family studies and life course. The department administers an honors program for selected students.Human Service Studies (HSS): Does not have separate options. Courses focus on three content clusters: human service environments, programs, and processes. A professional internship and senior seminar are required. Students may meet the requirements of an accredited bachelor's degree program in social work.

Nutritional Sciences (NS): The division supervises the department major. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students

Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science

Interdepartmental Major in Biology and Society (ID-BS).
Interdepartmental Major in Policy Analysis (ID-PA).
Individual Curriculum: It is possible to develop an individual program of study if none of the above programs fits particular educational and career objectives

## Changing Majors

Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of Student Services, N101 Martha Van Rensselaer Hall) will officially record the change so that a new adviser can be assigned to the student

## Students of Mature Status

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group. The counselor for mature students in the Office of Student Services (N101 MVR) can provide information of interest to mature students.
Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and are also permitted to extend their residency beyond the normal eight terms.

It is highly recommended that mature students contact the director of the Continuing
Education Information Service, B20 Day Hall, for information on resources available through that office.

## Special Students

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree.

## Empire State Students

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer

Session, Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.
At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

## CONSUMER ECONOMICS AND HOUSING

The behavior of people as consumers and family members and their interactions with private markets and public sectors of the economy are increasingly important as the economy becomes more service-based. One result has been an increasing demand from business and government for trained individuals who understand consumers, families, the markets in which they deal, and how public policies affect the markets and through them consumers and families. The demand has been sufficient to elevate salaries for well-trained individuals

The consumer economics and housing major provides such training. The major combines economics with statistics, sociology, and family resource management to study how consumer markets work, how firms and consumers behave, the role governments play in consumer protection, how functions shift between households and markets as prices, incomes, social values, and legislation change, and how changes in the family affect consumer markets. Students interact with the faculty and with each other both in the classroom and in field-based learning experiences in the Ithaca area, New York City, Washington, or abroad.
Graduates in consumer economics and housing are prepared for a wide variety of consumer- and family-related positions in business and government. The major also provides an excellent foundation for further studies in economics, law, graduate business, and policy analysis.

The consumer economics and housing major is flexible. Students are assigned a faculty adviser by the advising coordinator unless the student wants a particular adviser. The earlier the decision to major in CEH is made, the greater the freedom to develop a program to meet individual educational or career goals. Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. Students may make an appointment directly with an adviser or with the advising coordinator, Jennifer Gerner, 132 Martha Van Rensselaer Hall.

## DESIGN AND ENVIRONMENTAL ANALYSIS

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people
spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives.
The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.
Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and materials samples for student use.

## Options

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER).

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

## Option I: Interior Design

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.
Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design

## Option II: Facllity Planning and Management

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychol-
ogy, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.
Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

## Option III: Human-Environment Relations

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior, and to use that knowledge to help architects, planners, interior designers and product designers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human-environment relations is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning, Electives in the social sciences and in research methods and statistics are encouraged.

## Academic Advising

All DEA majors are matched with a faculty adviser during their first semester by advising coordinator Michael Boyd, in E206 Martha Van Rensselaer Hall.
Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college to meet special needs helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

## Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

## HUMAN DEVELOPMENT AND FAMILY STUDIES

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life course. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspec-tive-the person in interaction with complex biological, situational, and environmental conditions of everyday life-is featured in many departmental courses.
Major social science disciplines concemed with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in clinical psychology, counseling, law, medicine, special education, or university teaching and research that require some graduare study. Others may go directly into employment in business or industry or take bachelor's-level positions such as youth counselors, day-care workers, personnel assistants, research technicians, and social program assistants.

## Academic Advising

Every HDFS major is assigned a faculty adviser in the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and consults with the student about career options. The adviser can also help students find special opportunities for individual study or for experience outside the classroom. Although advisers must sign course schedule cards, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers for any reason should check with the undergraduate advising coordinator, Joan Brumberg, or the department office, in NG14 Martha Van Rensselaer Hall.

## Curriculum

HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with specialized work in an area outside the department, such as communication arts, nutrition, business, or government.
During their first two years, students are expected to combine a variety of liberal arts courses with HDFS core courses HDFS 115 (Human Development); HDFS 150 (Families and the Life Course); and intermediate courses in phases of development, cognition, or social-personality. This encourages diversity yet ensures a common base for upper-level courses in the major. Courses within the
department vary from lectures and discussions to research and independent study.
All students are encouraged to participate in an experiential learning course in their particular area of interest. The course may focus on a naturalistic or laboratory setting (e.g., nursery school, youth detention center, retirement home) or on a research setting (e.g., interviewing, administering tests, observing behavior).
An HDFS major also takes a number of upperlevel departmental courses in particular areas as described in the Student Guide. Additional information is available in the HDFS Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

## Math Requirement

HDFS majors are required to fulfill a math requirement by passing Education 115 or demonstrating equivalent competency by scoring 650 or higher on the math SAT examination.

## Teaching Certification Option

The cooperative Cornell HDFS-State University College at Cortland education program is designed to meet New York State certification requirements for teaching grades $\mathrm{N}-6$ while simultaneously earning the Cornell bachelor's degree in HDFS. The program requires that the student spend three years at Cornell and the senior year and part of two summers registered in absentia at SUC Cortland. Students keep their Ithaca housing, since Cortland is just 18 miles away and the onesemester teaching internship is based in Ithaca.
This highly selective undergraduate program offers an alternative to the option of seeking a master's degree in education after the undergraduate studies at Comell have been completed. Students interested in the program should discuss the merits of each option with the Coordinator of Undergraduate Education in NG09 MVR.
Course work at Comell must be carefully planned. Elective options will be somewhat limited because it will be necessary to consider the twenty-seven Cortland credits plus three education courses at Cornell as electives. More information is available in the HDFS Office, NG14 Martha Van Rensselaer Hall.

## Honors Program

The honors program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should consult the coordinator of the honors program during their sophomore year.
A grade-point average of 3.3 is recommended for entry into the program, although promising students who lack the grade-point average also may apply if they can otherwise
demonstrate their potential for honors work. Honors students must take an approved course in research design, preferably in the sophomore or junior year.
Students spend part of their junior and senior year working on a thesis under faculty supervision, completing the project before March 15 of the senior year when the
student's oral examination is held. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

## Language Competency

The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. While this is not a graduation requirement, it is strongly recommended that HDFS majors develop competency in a second language.

The following departments teach foreign languages or literature or both in the College of Art and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

Work toward foreign language competency should be undertaken in the freshman and sophomore years. Please note that high school or transferred language courses can be used for advanced standing credit, even if the student does not want to do any further language work at Cornell.
Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFICIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFICIENCY in their native language and for studying English as a second language at Comell.

## Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.
The type of examination depends on the language course and the level of achievement:

1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 203 Barnes Hall, and pay a fee.
2) Latin (all courses except 105 and 107): departmental examination.
3) Greek (all courses except 101, 104, and 111): departmental examination.
4) Arabic: departmental examination.
5) Hebrew: departmental examination.
6) Other languages: special examinations: see the professor in charge.
7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE).
See section on College of Arts and Sciences, Language Requirement, for further information.

## HUMAN SERVICE STUDIES

Faculty in the Department of Human Service Studies (HSS) prepare students for a variety of careers in programs that serve individuals, families, and the community. HSS graduates work in schools, social services, Cornell Cooperative Extension, health and mental health programs, and community development agencies.
They are employed in such positions as counselors, school teachers, social workers, community educators, planners, and researchers. Many HSS graduates pursue graduate study in law, education, medicine, social work, health, and a variety of social sciences. HSS majors come from diverse backgrounds, but they share a common goal of wanting to serve the needs of others.
HSS is unique in that it integrates a broad spectrum of courses offered by several departments and colleges and focuses them for professional practice in the human services. All HSS students take courses that provide a knowledge base in three content clusters:

1. Human service environments - course choices provide students with knowledge about the working context within which the human service provider functions, including a base in social psychology, group and organizational behavior, social system perspectives, power and leadership.
2. Human service programs - courses for this requirement are selected to provide the student an introduction to historical and current program models, barriers to service delivery, developments in health, education and social welfare-all in the context of both the client and the work done by the human service professional.
3. Human service processes - courses for this requirement are designed to provide students with methods to work effectively in human service programs and environments. Courses include planning and development content, program delivery modes, decision-making processes, basic social planning methods, and program evaluation.

All students take a professional internship and an integrative senior seminar. Regardless of their specific career goals, students acquire a broad understanding of human services and
the ways they can collaborate to improve the human condition. In addition, students specialize in an area of concentration such as health, education, social welfare, policy, planning, or evaluation.

## Academic Advising

It is important for a student who is interested in majoring in Human Service Studies to declare that major as early as possible. Once that is done, students work with their assigned faculty advisers to plan course work and related educational activities. Students are free to change advisers. Although faculty advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of courses and make sure that the program meets graduation requirements of the major and the college. Students may make an appointment with an adviser or with the undergraduate advising coordinator, Don Tobias, in 183 Martha Van Rensselaer Hall.

## Social Work Program

The undergraduate social work major at Comell has as its principal educational objective the preparation of students for beginning professional social work practice. In addition, the major prepares students for graduate education in social work and contributes to the enrichment of a college education by helping students understand social welfare needs, services, and issues.
The social work program is accredited by the Council on Social Work Education. Students who complete all requirements are eligible to apply for beginning-level employment as professional social workers or to apply for advanced standing in a graduate school of social work.

## TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.
Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Comell University Costume Collection, housed in the depart ment, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

## Academic Advising

All TXA majors are matched with a faculty adviser by the advising coordinator, Peter Schwartz (201 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty
adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college

## Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for loss or theft of student work.

## Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

## Key Policy for Apparel Design Studios

To allow design students access to studios for out-of-class work at any hour in which Van Rensselaer Hall is open, and to provide security for the studios, the department has instituted a key policy. Each student in TXA $040,145,264,367,375,425,446$, and 465 who submits a security deposit of $\$ 50$ will be given a key to the studio in which his or her class is held. In the event that any key is lost, the studio will be rekeyed, and the cost will come from the security deposit of the student who lost the key. At the end of each semester, the studio will be assessed for missing and damaged equipment. The total amount assessed will be deducted from the security deposits of all students assigned to that studio If all keys are returned and no damage or theft is reported, the security deposits will be retumed at the end of the semester. Students who do not wish to work in the studio outside of class hours may elect not to have a key and therefore will not be required to submit a security deposit. Under no circumstances will these students be admitted to the studio outside of class hours.

## Optlons

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

## Option I: Apparel Design

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

## Option II: Apparel-Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

## Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

## Career Opportunities

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and governmentsponsored research, and in community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

## INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.
Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's
individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Human Ecology Student Guide, available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

## INTERDEPARTMENTAL MAJOR IN POLICY ANALYSIS

As our economy has become more complex, so too has the role of the public sector in our society. An understanding of governmental processes and of how public policies affect the several segments of society has become more important. Individuals with the ability to evaluate government programs critically and trace their impacts quantitatively to consumers, families, business, and industry are in demand at all levels of government and business. Supervised by the Department of Consumer Economics and Housing, the policy analysis major uses the resources of the college and the university to trace and estimate government's influence in the economy.

In the policy analysis major, the student gains a basic understanding of the role of government in the economy and the political environment in which policy is made. Students concentrate on learning the economic, cost/benefit, and statistical skills necessary to evaluate the performance of government programs and policies-consumer policy, housing policy, welfare policy, environmental policy, foreign policy, for example. Because experience in legislative, regulatory, and public administration activities is helpful in providing the context for policy analysis, involvement in Field and International Study, Cornell-in-Washington, and Cornell Abroad is encouraged. The specific requirements for policy analysis are listed under the interdepartmental majors.
Graduates in policy analysis are attractive to business and industry as well as to government because of their analytical skills in economics and statistics, and their knowledge of political processes. Students also use the major for further work in policy studies, law, and business administration.

The policy analysis major is flexible and allows individual program planning. The faculty adviser assigned by the undergraduate advising coordinator can help develop a program to meet individual educational and career goals. This is particularly important in constructing the appropriate policy concentrations. Transfer students are urged to contact their faculty adviser as soon as possible. An appointment may be made directly to talk either with an adviser or with the advising coordinator, Jennifer Gerner, 132 Martha Van Rensselaer Hall.

## INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in
design, include at least 40 credits in human ecology courses, and not exceed the nommal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.
Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.
If an individual curriculum seems advisable, Patti Papapietro, the individual curriculum coordinator in the Office of Student Services, N101 MVR, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

## SPECIAL OPPORTUNITIES

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts, when accompanied by appropriate documentation from the program.

## The Urban Semester Program in New York City

The Urban Semester Program is a set of creditbearing courses spanning the academic yearfall and spring semesters, winter intercession, and the summer session. During the fall and spring semesters, students focus on multicultural issues in urban affairs. Each term, course work in two separate seminars investigates multicultural concepts as they are implemented in professional, community, or public policy settings. Students study the possibilities and barriers that a multicultural society presents and their articulation with professional practices, cultures, and identities. Students intern between 20 and 30 hours each week. The three-week winter (intercession) course enables students to explore community service opportunities through fieldwork in New York City by working full time in community-based organizations. Over the course of an eight-week summer semester, students carry out research projects on the nature of professional practice by interning full time in settings of their choice. Students who seek to contribute to their own communities are encouraged to participate in any of the program offerings. For further information, contact the Urban Semester Program at (212) 746-2273, or the Student Resource Center, N139 Martha Van Rensselaer Hall

Field and internship placements also are available through each academic department in the college, in the Ithaca area, Albany,

Washington, Boston, and elsewhere. Students should contact their faculty adviser or the Student Resource Center, N139 Martha Van Rensselaer Hall, for more information.

## International Study

Study abroad allows students to focus on international issues and intercultural understanding through sponsored programs of study abroad for which academic credit is available. Course work in a foreign institution will, in general, be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology
Opportunities for study abroad are available for human ecology students in several ways: through Comell Abroad, through U.S. collegesponsored programs abroad, and through direct enrollment in a foreign university. In all cases, students remain registered at Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Application packets for study abroad can be obtained from and should be submitted to the study-abroad adviser in the Office of Student Services, N101 Martha Van Rensselaer Hall. The Student Resource Center, N139 Martha Van Rensselaer Hall, has catalogs and other information about study abroad opportunities.

## Gerontology Concentration

## Gerontology Certificate Program

This program develops students' understanding of and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges at Comell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact the Gerontology Coordinator, Life Course Institute, 259 Martha Van Rensselaer Hall.

## Teacher Certification in Home Economics

Students can combine any major in the college with additional course work that leads to home economics teacher certification (kindergarten through twelfth grade) in New York State and a number of other states. Interested students should contact the Office of Student Services in N101 Martha Van Rensselaer Hall.

## University Programs

## Africana Studies and Research Center

Courses taken in the Africana Studies and Research Center (ASRC) may be used to meet some of the distribution requirements of the college. Up to two courses or 8 credits of such courses may be applied toward the 12 additional credits in natural and social sciences (section I-C of the graduation requirements) or toward the 9 additional credits in communication, analysis, and the humanities (section II-B). This allowance is in addition to the freshman writing seminar credits that may be taken in ASRC. Other courses taken in the center count as endowed division electives (area IV).

A list of ASRC courses approved to meet distribution requirements or as electives is available in the Office of Student Services (N101 Martha Van Rensselaer Hall).

## Double-Registration Programs

Johnson Graduate School of Management
A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology Accepted students should be aware that if the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

## Law School

A small number of highly qualified applicants may be admitted to the Comell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Because students accepted to this program will spend their senior year in the Cornell Law School. they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

## Cornell Medical College

A limited number of highly qualified students from three Comell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 103 Barnes Hall.

## Off-Campus Programs

## New York State Assembly Internships

A limited number of session internships with the New York State Assembly are available in spring semester. Intern applicants must be sophomores or higher and enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Office of Student Services, N101 Martha Van Rensselaer Hall.

## Cornell-in-Washington

For information on Cornell-in-Washington, see page 19 .

## Ithaca College

Full-time undergraduate students at Comell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Comell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Comell students enrolled in methods and practiceteaching courses at Ithaca College

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.
For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

## Wells Collage

Full-time undergraduate students at Cornell may petition to enroll in courses at Wells College. Students pay regular tuition to Cornell and only special fees to Wells College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Wells College.
Cornell students are eligible to register only in Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Wells College courses is on a space-available basis. Participation in this program is not guaranteed, and Wells College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

## PLANNING A PROGRAM OF STUDY

## Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department's advising coordinator. The advising coordinator can help match a student's needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the advising coordinator to discuss such a change. Faculty advisers, and counselors in the Office of Student Services (N101 Martha Van Rensselaer Hall), are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the course enrollment schedule card during course enrollment each term, it is the student's
responsibility to make sure that her or his program meets graduation requirements for the major and the college. Advising coordinators in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

## Completing Graduation Requirements

A summary of record is kept for each student in the Office of Student Services, N101 Martha Van Rensselaer Hall. At fall registration each continuing student receives a copy showing which major and graduation requirements have already been met. It is important to check this summary and to bring any questions to the attention of staff members in the Office of Student Services. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.

## Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and department advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

## Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-Englishspeaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section "Advanced Placement of Freshmen."

## GRADUATION REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

## General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.
To graduate, students need to

1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C-) or better,
4) fulfill residency requirements, and
5) complete two terms of physical education within the first two semesters

## College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there
I. Natural and Social Sciences ( 24 credits)
A. Natural sciences ( 6 credits) selected from Biological Sciences 101-103,102-104, 105-106, 109-110; Chemistry 103-104, 207-208, 215-216; and Physics 101-102,112, 201 or 202, 207-208. Biological sciences courses must be taken sequentially.
B. Social sciences ( 6 credits) selected from economics (including CEH 110,111 but excluding Agricultural Economics 221 and 310); psychology (including Education $110,311,317$; DEA 150; HDFS 115, 216, 217, 218, 219); sociology (including rural sociology, CEH 148, and HDFS 150). Do not take both Economics 101 and CEH 110; Economics 102 and CEH 111; Psychology 275 and HDFS 360; Rural Sociology 101 and Sociology 101; or Sociology 243 and HDFS 150; they are equivalent courses.
C. Additional credits ( 12 credits) selected from any subjects listed above or from courses in anthropology (except archaeology); Astronomy 101 or 102; biochemistry; microbiology; genetics and development; Geological Sciences 101; and government
II. Communication, Analysis, and the Humanities ( 15 credits)
A. Fresbman writing seminars ( 6 credits) selected from courses listed in the freshman writing seminar brochure.
B. Additional credits (9 credits) selected from art; communication; comparative literature; computer science; drawing; English; ancient or modern foreign languages; history; history of art; history of architecture; mathematics; music; Natural Resources 407; philosophy; statistics (students should not take both Industrial and Labor Relations 210 and Agricultural Economics 310, since the courses are substantially the same); theatre arts; DEA 101,111, or 115; HSS 292; TXA 117, 125, 375; and selected ASRC courses (list available in the Office of Student Services, N101 Martha Van Rensselaer Hall).
III. Human Ecology ( 40 credits)
A. Requirements for the major (the number of credits required varies by major and option).
B. Other credits in Human Ecology (15) The following specific qualifications apply:

- No credit for HE 00 courses, HE 100, HE 101 , or any 403 course can be counted to fulfill this requirement.
- A maximum of three credits of special studies credits ( 400,401 , and 402 ) or of any internship credit can be used.
- A maximum of six credits of HE 408 can be used.
Transfer students (external and internal) can meet this requirement by completing 15 credit hours comprised of transfer credit and credit earned in the college, or comprised of credit hours all taken in the college and prorated according to the student's status at matriculation. (Refer to "Policies Related to College Requirements" in the Human Ecology Student Guide for details of this policy.)

## All students, including internal and external transfer students, must complete a total of 40 credits in Human Ecology.

IV. Additional Credits ( 41 credits)
A. Requirements for the major (number of credits varies from 0 to 15 credits).
B. Electives (number of credits varies from 26 to 41 credits).
Credit requirements in this section are met through courses in the state divisions of Cornell:

- College of Human Ecology (in addition to courses in sections I, II, and III)
- College of Agriculture and Life Sciences
- School of Industrial and Labor Relations
- College of Veterinary Medicine
and through courses in the endowed divisions of Cornell:
- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Courses in the endowed divisions in this section may not exceed a total of 21 credits.

## V. Physical Education ( 2 credits)

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

## Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.
Section II. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. Students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

In sections I, II, and III, the required credits listed are the minimums; credits taken in excess of those minimums (section I, 24 credits; section II, 15 credits and section III, 40 credits) count toward electives (section IV, 41 credits).
In sections I and II, courses specified by the major to meet the requirements in the sections may either be used as meeting the credit requirements in those sections or be applied toward the additional credits in section IV.
Section IV. There is no limit to the number of credits that may be taken in the state divisions of Cornell, and therefore students may choose to take additional state credits and graduate with more than 120 credits.
Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of $F$ or $U$ is received will be counted as part of the 21 endowed credits allowed.
Elective credits eamed in Cornell's endowed divisions during summer session, in absentia credits, and transfer credits are counted as credits eamed in the state divisions and therefore do not count as part of the 21 credits allowed in the endowed divisions in meeting the requirements of this section.
Not more than 21 credits in section IV may be taken in the endowed divisions of the university except under both of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);
2) Payment must be made for each credit taken in excess of the 21 allowed, whether or not the courses are passed. For the fee per credit charge, students should call the Office of the Bursar.

## Related Policies for Transfer Students

Section 1-A. Transfers who enter human ecology programs in consumer economics and housing, design and environmental analysis, human service studies (with the exception of the social work program), and policy analysis can satisfy the College of Human Ecology's natural science graduation requirements with any course(s) taken to meet a former college's natural science requirements as long as the course(s) transferred dealt with matter, energy, and their interrelationships and transformations. Courses in areas such as psychology and mathematics are not included, even though courses in these areas may have been taken to meet a former institution's natural science requirement.
Section II-A. Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshmen writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.
Section III-B. External transfer students can meet the requirement for course work outside the major in the College of Human Ecology by completion of either of the following:

1) 15 credits of work, outside their department, comprised of transfer credit and credit earned in the college,
2) credits all taken in this college (no transfer credit is allowed to meet this requirement), on the basis of the status of the student's matriculation and prorated as follows:

Cornell
Human Ecology
Credits to Satisfy
Work outside
the Major
Status at Matriculation
Freshman (1-25 transfer credits) 15
Sophomore (26-55 transfer credits) 12
Junior (56-85 transfer credits) 9
Senior (86-120 transfer credits) 9
Transfer students from other Cornell divisions are required to take the full 15 credits outside the major.
Note that transfer students are still responsible for completing a total of 40 human ecology credits under section III.
Section IV. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C- will not transfer to meet human ecology degree requirements.
Section V. Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Comell, regardless of whether they took physical education at their first college. Exemption or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the college registrar, Mary Rhodes, in N101 Martha Van Rensselaer Hall.

## Related Policies for Freshmen

Section $V$. Freshmen are required to take two semesters of physical education during their freshman year. Freshman transfer students entering with 12 or more credits have their physical education requirement reduced to one term.

## Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements-for the major, for distribution, for total credits, and for cumulative average-in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the college registrar at the beginning of the semester so that their names can be placed on the list of degree candidates.
Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a petition to the college registrar in the Office of Student Services, N101 Martha Van Rensselaer Hall. The petition should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such
requests are usually granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four years old at the time of matriculation) are not required to petition the college registrar for approval to study beyond the usual eight semesters.

## Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the Human Ecology Student Guide. Petition forms are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

## PROCEDURES

## Course Enrollment and Registration

Course enrollment occurs in two steps. During enrollment students request courses, and at university registration students complete information forms, receive their schedules, and have their university IDs validated.

Students are expected to complete course enrollment during specified times each semester. It is the student's responsibility to learn the dates of course enrollment.

Freshmen and transfer students enrolling for the first time in the university in the fall term enroll in their courses during the summer before they arrive on campus. Enrollment materials are mailed to new students in May. Because new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. The orientation schedule given to all new students lists a specified time to enroll in such courses.

Continuing students enroll for fall semester in March or April, and enroll for spring semester in October or November preceding the beginning of the term. They are notified of course enrollment dates by poster and by notices in the Comell Daily Sun. Course enrollment materials are available for continuing students in the Office of Student Services, N101 Martha Van Rensselaer Hall. For the first three weeks of the term, students have an opportunity to add courses in other divisions of the university as well as in human ecology.

## Enrollment

Before or during course enrollment, students discuss their program plans with a department adviser or a college counselor in the Office of Student Services. For their advising sessions, students need the list of last-minute changes issued by the college registrar, and the Course and Time Roster issued by the university registrar. Students must have their course enrollment schedule signed by their depart-
mental major faculty adviser, or if they have not declared a major, by a college counselor.

Students file completed enrollment materials by the announced deadline in the Office of Student Services, N101 Martha Van Rensselaer Hall.

The following policies and procedures apply to course enrollment.

## Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in Cornell University: Courses of Study. For such courses, students must obtain the instructor's permission before filing their course enrollment form during the pre-enrollment period. Instructors indicate their permission to take the course by signing the student's course enrollment form.
Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary ( 100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in 312 Malott Hall.

## Special Studies Courses

Each department in the College of Human Ecology (CEH, DEA, HDFS, HSS, DNS, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.
The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Those courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number $(300,400,401$, or 402$)$ for a special project.
A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student's department adviser before submitting it to the Office of Student Services. The student also must complete a course registration form in the Office of Student Services. Special studies forms and instructions are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

## Course Loads

The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater, without special permission from the college registrar. To receive permission, a student attaches a note to the course schedule, citing reason(s) for carrying a heavier load, before submitting it to the Office of Student Services, N101 Martha Van Rensselaer Hall.

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. Courses cannot be dropped after the seventh week of classes without petitioning, so students should try to avoid the need to drop courses.
Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Student Services, N101 MVR.
Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)
Students of mature status may carry 6 to 12 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of Student Services, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

## Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in Cornell University: Courses of Study. Student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

## Late Course Enrollment

Students who do not file a course enrollment form during the course enrollment period usually must wait until the beginning of the semester to enroll. Extensions are rarely granted and usually only for documented illness.
Students who do not meet the deadline for any reason should see the college registrar in N101 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

## University Registration

University registration for human ecology students occurs in the auditorium of MVR Hall during the week preceding the start of classes. The Office of the University Registrar announces the specific times of registration.
At registration, students first have their ID validated and then pick up a college

## HUMAN ECOLOGY•1994-1995

registration card at the university table immediately inside the door of MVR auditorium.

Next, students fill out the college registration card and proceed to the college table where they submit their college registration card; in return, they receive a computer printout of courses for which they are officially enrolled.
Important: Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.
Students also receive a Course and Room Roster which indicates the locations of their classes.

During university registration in the fall semester, each continuing student receives a copy of his or her summary of record from the Office of Student Services. This summary shows graduation and major requirements that the student has completed. Students are responsible for assuring that their academic program meets graduation requirements. They resolve any questions about graduation requirements with the appropriate staff person in the Office of Student Services. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Student Services.

## Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, there will be a $\$ 200$ additional charge.
After completing late university registration, the student submits the college registration card to the Office of Student Services and receives a computer printout of the courses for which he or she is officially registered.
Students who fail to register by the third week of the term will be withdrawn from the university. Sbould uithdrawn students wish to return, they must reapply through the admissions committee.

## Course Enrollment Changes

## Deadlines

- During the first three weeks of the term, courses may be added or dropped.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor's signature on the add/drop form).
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student who submits a petition after the seventh week of the term requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of $\mathbf{W}$ (Withdrawn), and the course will remain on the official transcript

## Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add classes after the first week of classes only with the permission of the instructor. After the first three-and-onehalf weeks, students must petition to drop the course. (See Petition Process, General Petition Form for information on the procedure.)

## Procedures

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping an unneeded course early makes room in the course for other students who may need it for their academic programs.
Ideally, students evaluate their course work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.
Some procedures required for course enrollment are also required for course enrollment changes. For example, the instructor's permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department adviser.
Waiting List: The Office of Student Services maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a waiting list, students must check in person every 48 hours with the Office of Student Services; names of students who do not check in are automatically dropped from the list.
Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

There is no charge for course changes. To make course changes during the first three weeks, a student takes the following five steps:

1) Obtains a course-change form from the Office of Student Services, N101 MVR.
2) Completes the form and takes it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of Student Services; for courses outside the college, the forms should be taken to the appropriate departmental office in the other college.
3) Makes sure that his or her name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Asks the person recording the change to sign the form.
4) Submits all signed forms to the Office of Student Services, including the forms for out-of-college courses. Changes are not completed until the signed forms are filed in that office. If a student does not drop a course that he or she no longer attends, the student is in danger of receiving an $\mathbf{F}$ in the course.
5) Receives carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify later that the forms were filed.
To make course changes during the fourth through seventh weeks of the term, a student takes the following steps:
6) Completes the five steps listed above for changes made during the first three weeks.
7) Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section below, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

## In absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Comell after the student matriculates in the College of Human Ecology To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.
In absentia petition forms are available in the Office of Student Services, N101 MVR. The student completes the form, has it signed by his or her faculty adviser, attaches catalog descriptions for the courses that will be taken, then submits the form to the Office of Student Services, N101 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.
The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Comell.
The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Office of Student Services in the College of Human Ecology. Only then will credit be officially assessed and applied to the Comell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Only credits (not course names and grades) for in absentia study appear on the Cornell University transcript
A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology
The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

## Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting an extension in writing from the Office of Student Services.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Student Services. The counselor can supply the necessary forms for the student to complete and file with the Office of Student Services, N101 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or
requests for a leave of absence from students who have already had two semesters' leave of
absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.
A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.
The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

## Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Student Services and filing a written notice of withdrawal in the Office of Student Services. A student considering such an action is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.
A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

## Petltion Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.
Students can avoid the necessity to petition by carefully observing the cleadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Student Services, N101 MVR

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Office of Student Services.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student's faculty adviser before CAS will consider the appeal.
Two kinds of petition forms are available. The uses for both forms are described in the Human Ecology Student Guide

## General Petition Form

The general petition form is available in the Office of Student Services, N101 MVR. After completing the form, submit it to the Office of Student Services. Students learn the result of the petition process for the general petition form by checking their mail folder in the student mail center, 138 MVR.

## In absentia Petition Form

The in absentia petition form is available in the Office of Student Services, N101 MVR. After completing the form, submit it to the Office of Student Services. In absentia petitions must have attached to them the catalog descriptions of the courses for which credit is requested from the other institution. In absentia petition decisions usually are sent to students via the U.S. postal service.

## GRADES

See the "Grading Guidelines" section for information on the official university grading policies.

## S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the Comell University: Courses of Study. University regulations concerning the S-U system require that a grade of $S$ be given for work equivalent to a C- or better; for work below that level, a U must be given. No grade point assignment is given to S , and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an $S$ is, however, counted for credit. No credit is received for a $U$. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean's List must take at least 12 credits for the usual A-F grades.
Only juniors and seniors may take an S-U grade in courses in which the grade of $S$ or U is optional; however, sophomores may take courses in which only the grade of $\mathbf{S}$ or $\mathbf{U}$ is offered. A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course may be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.
To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit on the course enrollment form, or file an add/drop/ change form in the Office of Student Services
before the end of the third week of the term. After the third week of the term, students must petition the college registrar to change grade options. Forms are available in the Office of Student Services.

## Grades of Incomplete

A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.
Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.
If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete will be automatically converted to an F.
When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of $\mathbf{F}$ or incomplete, which has been signed by both the instructor and the student, must be submitted by the instructor to the Office of Student Services. This form is submitted with the final grade sheets whenever a grade of incomplete is given.
This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.
If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out and signing part of the form and tuming it in to the Office of Student Services with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of Student Services to fill out and sign the remainder of the form.
If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the semester in which the student was registered for the course.
A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of Student Services (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.
NOTE: Grades received more than three weeks after the end of a term are NOT computed in the student's term average when computing the Dean's list. Therefore, students who feel a missing grade or a grade change will make them eligible for the Dean's list
must have that grade reported to the Office of Student Services no later than the end of the third week after the term has ended. For purposes of this rule, the last day of final exams is the last day of the term.

## ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.
Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.
Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the wellbeing of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of livingat home, in the community, and throughout the world.
Students are eligible for membership if they have attained junior status and have a cumulative average of not less than $\mathbf{B}$. Transfer students are eligible after completing one year in this institution with a B average.

## Current members of Kappa Omicron Nu elect

 new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Gret Atkin, N115A Martha Van Rensselaer Hall, their sophomore year or the first semester of their junior year.

## Bachelor of Science with Distinction

 recognizes outstanding scholastic achievement. Consideration will be given to seniors whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, previous work
taken at another institution is included in the computation of the student's academic average. Names of seniors who meet these requirements are presented to the faculty of the college for approval.
The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.
To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

## INTERDEPARTMENTAL COURSES

HE 100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits. Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. S-U grades only.

Fall and spring: sec, T R 10:10 or 11:15, plus two 1 -hour labs to be arranged. H. Selco.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.
HE 101 College Achievement Seminar 6 -week summer session. 2 credits. Enrollment limited to and required of Prefreshman Summer Program students. S-U grades only.
H. Selco and staff.

The objective of this course is to improve the study and leaming skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

## THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

## Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. During fall and spring semesters students enroll in two separate seminars focusing on the opportunities and barriers that a multicultural society presents and their articulation with professional, community, or public policy settings ( 15 -credit residential program). Students intern three to four days each week and are encouraged to live in the Olin Hall clormitory of the Cornell University Medical College.

The three-week winter intercession course ( 1 credit) enables students to do fieldwork in New York City by working full time in community-based organizations or through research supervised by the director. In the eight-week summer semester ( 3 credits), students carry out research projects on the nature of professional practice by interning full time in settings of their choice. Students who seek to contribute to their own communities are encouraged to participate in any of the program offerings. Most students work with the program staff to locate internships For further information, contact the Urban Semester Program at (212) 746-2273 or the Student Resource Center, N-139 Martha Van Rensselaer Hall.

New York City offers a wide variety of intership settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

## - Health and medicine-New York

Hospital/Comell Medical Center, Chinatown Health Clinic, New York City Department of Public Health, Bellevue Hospital, Queens Medical Center for Women and Children, Community Health Project

- Private and public law-NOW Legal Defense and Education Fund, Neighborhood Defender Service of Harlem, Legal Aid, Puerto Rican Legal Defense and Education Fund, NAACP Legal Defense and Education Fund, Gay and Lesbian Anti-Violence Project, Kane Kessler, P.C.
- Government and community agencies-

Women's Action Alliance, The Center for Puerto Rican Studies, New York City Commission on the Status of Women, New York City Council offices, Cornell University Cooperative Extension, New York City Department of Consumer Affairs

- Wall Street firms and other private businesses-Bloomingdales, Prudential Securities, Oppenheimer, Inc., The Aclvertising Council, GKN Securities, Rogers and Cowan, Inc., Kidder Peabody, Co., Hill and Knowlton, Young and Rubican, Altschiller Reitzfeld, Terry Williams Agency
- Private not-for-profit organizations Grant Street Settlement House, Neighborhond Housing Services, Abyssinian Baptist Church Development Corporation, University Settlement Society of New York, Urban Development Corporation, Greater Chinatown Community Association, Lesbian and Gay Community Services Center
- Private and public schools-United Federation of Teachers, Central Park East, River East, Manhattan Center for Math and Science, PS 41, City and Country, Churchill School, Little Red School House, St. Ann's School
- Design and arts organizations-Harlem Textile Works, Perry Ellis International, Caribbean Cultural Center, Delacour \& Ferrara Architects, P.C., New York Shakespeare Festival Theatre, New York Theatre Workshop, Cynthia Rowley Company, SOHO20 Gallery, Museum of African Art, Lower East Side Tenement Museum
- Communication and media-Good Housekeeping, Mirabella, William Morrow Co., MTV, NBC-TV, ABC-TV, Good Morning America, WBAI-Radio, The Village Voice, The

New Yorker, Telemundo Group, Inc., Essence, McNeil-Lehrer News, Ad Council, McCalls, Child, Children's Television Workshop, Time Warner, Inc.

HE 401 Empirical Research
Fall, spring, winter, and summer
$1-15$ credits. Permission of instructor
S. Beck.

This course is available to juniors and seniors who wish to pursue a well-defined, independent research project sponsored by one or more faculty members. Honors projects are welcome. Such students must participate in the course work of HE 402, HE 406, or HE 408. Students must provide a project proposal no longer than five pages, an annotated biobliography representing the fields of interest to be researched or explored, and a letter of approval from one faculty member who will sponsor the investigation.

## HE 402 Supervised Fieldwork in Urban

 AffairsWinter. 1 credit. Limited to 12 students. Permission of instructor.
S. Beck.

This course allows students to participate in Urban Semester Program research or internship opportunities in New York City. Research projects are carried out under the supervision of the program director and will include opportunities for field observation, interviewing, and library and archival inquiry, focused on socioeconomic processes in urban settings. Students interested in internships locate their own placements with assistance from the Urban Semester Program staff. Students keep a journal that reflects on their community service experiences with a focus on specific learning objectives. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall. Applications must be accompanied by a résumé, a statement of learning objectives, a letter from the placement supporting the student's plan, and a rationale for participating in this activity. The research or community service must take place during the Cornell winter session period.

## HE 403 Teaching Apprenticeship

## Fall, spring, winter, and summer

S. Beck.

For study that includes assisting faculty with instruction. Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance.

## HE 406 Fieldwork in Professional

Practice: Summer in the City
Summer. $1-3$ credits. 8-week session Limited to 12 students.
S. Beck.

This is a seminar that examines the culture of professional practice, how professionals think and behave, and the role of professionals in society through internships and weekly discussions with practitioners in a variety of fields. Students will carry out fieldwork in internship placements by researching professional practice in New York City. They will intern for a minimum of eight weeks in organizations and fields such as business, government, private not-for-profit services, education, medicine and health, law, media and communications. Students locate their own internships with assistance from the Urban Semester Program staff. Applications and placement information are available in the

College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.

## FIS 408 The Urban Semester Program:

 Multicultural Issues in Urban Affairs Fall or spring, $9-15$ credits. Limited to $30-35$ students, depending on housing availability. Preference given to juniors and seniors. Applications and placement information available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.R 1:00-5:00 p.m., F 9:00-12:00 p.m.
S. Beck.

This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to: (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Students intern three to four days each week and attend seminars that include site visits and discussions on multicultural issues with representatives of community, education, government, business, medical organizations and health, legal, and private not-for-profit organizations. In addition, students can enroll in a three-credit companion course offered in New York City through one of the academic departments in the College of Human Ecology.

## CONSUMER ECONOMICS AND HOUSING

W. K. Bryant, chair; P. Chi, graduate faculty representative; J. Gerner, undergraduate advising coordinator; R. B. Avery, R. J. Avery, W. K. Bryant, P. Chi, F. Firebaugh, J. Gerner, R. Heck, J. Hogarth, N. Kutty, D. Lillard, A. Mathios, D. Mont, L. Morton, E. Peters, P. Pollak, M. Rendall, P. Zorn.

CE\&H 110 Introductory Microeconomics Fall. 3 credits. S-U grades optional. Students who have taken Economics 101 or the equivalent should not register. Required course packets available from the Campus Store

M W F 9:05; sec. to be arranged. B. Rosen.

This course introduces students to the operation of markets. The focus is on understanding the motivation and behavior of households and firms, and the market outcomes that result from their interaction. Special attention is paid to the role of market structure, issues of equity and efficiency, and governmental regulation and public policy.
CE\&H 111 Introductory Macroeconomics
Spring. 3 credits. S-U grades optional. Students who have taken Economics 102 or another introductory macroeconomics course should not register for this course.

M W F 11:15. B. Rosen.
Principles of macroeconomics with an emphasis on the relevance of economic policies to consumers and households. Topics include national income accounting, aggregate demand and aggregate supply, the role of monetary and fiscal policy in confronting the problems of inflation and unemployment, and international economics.

## CE\& 210 Intermediate Microeconomics

Fall or spring. 4 credits. Prerequisite: CEH 110 or equivalent. Fall: preference to sophomores and juniors. Spring: preference to juniors and seniors. Limited to 80 students per lecture in fall and spring.

Fall: Lecs, T R 12:20-1:35. Two prelims.
N. Kutty. Spring: M W F 1:25.
A. Mathios.

Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets-competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

## CE\&H 226 Household and Family

 DemographySpring. 3 credits. Prerequisite: RSOC 101 or equivalent. S-U grades optional.

T R 2:30-3:45. M. Rendall.
This course identifies important trends in U.S. household and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trencls in the size and composition of families and households, trends in marriage, divorce, remarriage. contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy implications of all of the above are also considered.
[CE\&H 233 Consumers in the Market Fall. 4 credits. Prerequisites: CEH 110 or equivalent. Not offered 1994-95.

M W F 2:30. R. J. Avery.
A study of the structure and functioning of consumer retail markets with emphasis on the role and activities of the major players in these markets-firms, consumers, and governments. The nature and consequences of various types of market failures are studied from the perspective of the firm, the consumer, and the role of government. Case studies and outside lecturers are used to impart reality to the course.)

## CE\&H 247 Housing and Society

Spring. 3 credits. S-U grades optional. M W F 10:10. Two evening prelims. P. Chi.

A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

## CE\&H 300 Special Studies for Undergraduates

Fall or spring. Credits to be arranged. Hours to be arranged. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

CE\&H 307 Introduction to Econometrics Fall. 4 credits. Prerequisites: Ag Econ 310 or equivalent.

M W F 10:10. D. Lillard.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed, and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model.

## CE\&H 315 Personal Financial Management

Spring. 3 credits. Preference given to human ecology students; limit 200; not open to freshmen. S-U grades optional.

M W F 10:10. Evening prelim. R. Heck. The study of personal financial management at various income levels and during different stages of the family life cycle. Topics include the use of budgets and recordkeeping in achieving family economic goals, the role of credit and the need for financial counseling, economic risks and available protection, and alternative forms of saving and investment.

## CE\&H 320 Economics of Family Policy-

 AdultsFall. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor.

M W F 1:25. J. Gerner.
This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

## CERH 321 Economics of Family PolicyChildren

Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor.

M W F 1:25. J. Gemer.
This course examines the economics of family policy issues that particularly affect children. This course focuses on a) the economic behavior that generates the policies and b) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

## CE\&H 325 Economic Organization of the

 HouseholdFall. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.

T R 10:10-11:25. W. K. Bryant.
Economic models are used to help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services; consumption and saving; time allocation in the household including labor supply, household production and leisure; human capital investment; fertility; marriage and divorce.

## CE\&H 330 The Economics of Consumer

 PolicySpring. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: CEH 110-111 or permission of instructor. Class packets on sale at Campus Store.

T R 8:40-9:55. D. Lillard.

Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to submit a research paper focusing on one specific area of policy intervention discussed in class.
CEAH 348 Urban Economics and Policy Fall. 4 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.

T R 2:30-3:45. B. Rosen.
This course explores the economics of cities and urban problems. The course starts by studying the location choices of firms and households. The remainder of the course is spent using these insights, as well as standard economic theory, to gain an understanding of urban problems-poverty, housing, transportation, education, and crime. An analysis of existing and proposed public policies is an important component of the course.

## CE\&H 355 Wealth and Income

Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under CEH 600. Prerequisites: CEH 110-111 or equivalent. S-U grades optional.

M W F 9:05. D. Lillard.
The wealth and income positions of American households are defined and described and their economic determinants discussed along with the impacts of tax and expenditure policies and the economics of the political positions for and against such policies.

## CE\&H 356 The Economics of Welfare

 PolicySpring. 4 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional.

M W F 9:05. D. Mont.
Using the tools of economics, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.
[CE\&H 365 Economics of Consumer Law Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. Not offered 1994-95.

M W F 11:15. A. Mathios.
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, and accident law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.]

## CE\&H 400-401-402 Special Studies for Undergraduates

Fall and spring. Credits to be arranged. S-U grades optional.

Hours to be arranged. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through
course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

CEsH 400 Directed Readings
For study that predominantly involves library research and independent reading.

CEsH 401 Emplirical Research
For study that predominantly involves data collection and analysis.

## CE8H 402 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.
[CE\&H 411 Time as a Human Resource Spring. 3 credits. Prerequisite: one course in sociology. Recommended: one course in microeconomics. S-U grades optional. Class notes for sale at Campus Store. Offered alternate years. Not offered 1994-95

M W F 10:10. R. J. Avery.
A set of historical and contemporary readings examining time management concepts and applications. Investigates changes in time use of family members in relation to social change. Explores meanings of market work, household work, and leisure in the context of family choices at different stages of the life cycle. Investigates current research concerning time allocations made by family members to household and market work. Examines use of time as a measure of household production.]

## [CEAH 434 Financial and Credit Markets

 and PolicySpring. 3 credits. Prerequisite: CEH 111 S-U grades optional. Not offered 1994-95.

M W F 10:10-11:15. R. B. Avery. This course studies the structure of financial markets in the United States. A number of different markets and institutions will be examined including: banks, savings and loans, insurance companies, pension funds, government bond markets, credit unions, and finance companies. The principles underlying government regulation of these institutions will be explored, as well as management problems and concerns. The emphasis will be on learning the institutional environment, not on personal finance.]

## CE\&H 435 Families in Business

Spring. 3 credits. Prerequisites: Ag Econ 310 or permission of instructor. S-U grades optional.

T R 10:10-11:25. Ramona Heck.
This course explores the economic impacts and implications of business viability for the family involved in a business. Topics include an overview of families who own businesses, profiles of their businesses, use of resources for the family and the business, unpaid transfers made within the family for the
business, economic well-being measures for the family and the business, and the transfer of wealth and business ownership among family members and between generations. Topics are explored relative to stages of business activity including feasibility, start-up, on-going maintenance, expansion or redirection, and exit or transfer. The course also surveys the conceptual issues and methodological approaches and issues related to the study of family-owned businesses.

## CE\&H 436 Survey Fieldwork on Family

 Owned BusinessesFall. 3 credits. Prerequisites: Ag Econ 310 and CEH 435. S-U grades optional. Offered alternate years

T R 10:10-11:15. Ramona Heck Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses; critical review of current research approaches and extant databases used to research business ownership; and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of extant databases for descriptive analyses of family-owned businesses.

## CE\&H 444 Housing for the Elderly

Spring. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. M W F 2:30-3:20. P. Chi.
This course focuses on the housing needs of the elderly, their current housing conditionsliving arrangements, tenure patterns, housing quality and housing expense burden-and socioeconomic and psychological aspects of the housing environment of the elderly Attention is also given to government housing programs for the elderly, integrating housing and related social service activities, and options for alternative housing.
[CE\&H 446 Housing Demography
Spring. 3 credits. Prerequisite: CEH 247 and one course in statistics or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1994-95. This course focuses on the interface between population and housing from different vantage points. From a housing perspective, the subjects covered in this course include (1) empirical assessment of housing quality and affordability; (2) social, demographic, and health effects of housing environment; (3) housing filtering and spatial patterns From a population perspective, the emphasis is on (1) household composition and housing adjustments, (2) household formation and future housing needs, and (3) housing issues for special population groups.]

## [CERH 448 Empirical Research in

 Housing and Mortgage Markets Fall. 4 credits. Prerequisites: CEH 210 and Ag Econ 310 or the equivalent. Not open to freshmen and sophomores. Not offered 1994-95The purpose of this course is to provide students with the opportunity to actively engage in empirical research. Using data from Syracuse, New York, the class (as a whole) will conduct a small-scale research project on a public policy issue.]

CE\&H 485 Evaluation of Public Policies
Fall. 3 credits. Prerequisites: CEH 110 or equivalent and an introductory statistics course. Recommended: CEH 210 or equivalent.

T R 2:30-3:45. N. Kutty
This course provides an introduction to the techniques used to evaluate public policies and programs. It will begin with a review of basic concepts in evaluative research: causal inference, validity, and experimental and quasi-experimental designs. The remainder of the course will concentrate on the tools of cost benefit analysis as a device for evaluating the effectiveness of government programs. Discussions of the techniques, issues, and problems of cost benefit analysis will be highlighted by examples of its use in a variety of public policy areas. Economic analysis and statistical techniques will be emphasized.

## CE\&H 600 Special Problems for

 Graduate StudentsFall and spring. S-U grades optional. Hours to be arranged. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor

## CE\&H 601 Research Workshop in

 Consumer Economics and Housing Fall and spring. $1-3$ credits. S-U grades only. W 12:20. Staff.Research seminar designed to provide a forum for graduate students in consumer economics and housing to present their own thesis research at an early stage and to provide critical input for other graduate students.
CE\&H 606 Demographic Techniques Fall. 3 credits. S-U grades optional. T R 12:20-1:35. M. Rendall. This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

## [CE\&H 607 Econometric Topics

Fall. 3 credits. S-U grades only. Prerequisite Ag Econ 710 or equivalent. Offered alternate years. Not offered 1994-95.

M W F 2:30-3:20. R. B. Avery An advanced econometric course consisting of two separate modules. The first module will cover household survey methodology including sample design, questionnaire development, data weighing, and imputation. The second module will focus on limited dependent variable models. Linear probability, logistic probit, and tobit models will be examined as well as problems of sample section bias.]

## CEEAH 613 Economics of Consumer

 DemandFall. 3 credits. Prerequisite: CEH 210, Economics 311 or 313 , or concurrent enrollment in one of the three. S-U grades optional

T R 8:40-9:55. K. Bryant.
Introduction at the graduate level to theory and empirical research on household demand, consumption, and saving. Emphasis on the use of the theory in empirical research Topics include neo-classical theory of demand, duality, complete demand systems, demographic scaling and translating,
consumption and savings. As time allows, Becker and Lancaster models of demand will be introduced.

## CE\&H 624 Economics of Household

 BehaviorSpring. 3 credits. Prerequisite: CEH 210 or Economics 311 or 313 or concurrent enrollment in one of the three. S-U grades optional. M W F 1:25. E. Peters.
Examination of theoretical and empirical literature concerning market work, human capital formation, household production, and family formation.

CEsH 627 Advanced Family Demography Spring. 3 credits. Prerequisite: CEH 606 or equivalent. S-U grades optional. Offered alternate years.

T R 12:20-1:35. M. Rendall.
This course examines the size and composition of households and families, variations in family and household structure among major subgroups, and changes in family and household structure over time and over the life cycle. The demographic processes underlying changes in families and households are examined, including marriage, divorce, fertility, mortality, and migration. The determinants of changes in these underlying processes and in family and household structure are analyzed, along with the consequences of these changes for labor force participation, household division of labor, living arrangements, intergeneration relations, and economic well-being and poverty.

CE\&H 635 Information and Regulation Spring. 3 credits. Prerequisite: CEH 613. Class packets on sale at Campus Store. M W F 2:30. A. Mathios. A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer wellbeing. Governmental regulation of products, of producers, of consumers, and of prices is examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public interest or to serve special interests. Economic analysis, rather than institutional structure, is emphasized.

## [CE8H 639 Consumer Decision Making

Fall. 3 credits. Not offered 1994-95.
Hours to be arranged. R. J. Avery. Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing; theories of group interaction in decision making; and the effect of advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to decision making by consumers in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.]

## CE\&H 648 Housing Economics

Spring. 3 credits. Prerequisite: CEH 210 or Economics 311 or 313.

T R 12:20. N. Kutty.
Introduction at the graduate level to economic theory and empirical research in the housing market. The course will generally take a micro perspective, focusing on housing demand (households' housing mobility, tenure, and consumption decisions), housing supply (maintenance, home improvement,
and new construction), and housing finance (mortgage markets, mortgage choice, mortgage termination). Attention will be paid to the operation of the housing market as well as to relevant public policy issues (governmental tax policy, rent control, discrimination).

## [CE\&H 720 Household Resource

 AllocationSpring. 3 credits. S-U grades optional Offered alternate years. Not offered 1994-95. TBA. Staff.
Family resource allocation is studied in the context of decision processes, and the behavior of decision makers. The relationship of decision making to family management is also explored.]

## [CE\&H 724 Family Policy

Fall. 3 credits. Prerequisite: CEH 624 or permission of instructor. S-U grades optional Offered alternate years. Not offered 1994-95.

## TBA. Staff.

This course examines the public sector policies that influence family time-allocation decisions. Particular attention will be given to the time allocated by female family members to non-household activities and how these activities are influenced by outside economic forces and by internal family characteristics.]

## [CE\&H 735 Consumer Policy

Fall. 3 credits. Prerequisite: intermediate microeconomics. S-U grades optional. Offered alternate years. Not offered 1994-95. TBA. Staff.
An examination of consumer policy in the United States. An interdisciplinary approach will be used in which the theoretical rationale for consumer protection laws, the political processes that mold the shape of current consumer policy, and the administrative, legal, and organizational constraints under which consumer policies operate are explored. In addition, techniques for the economic evaluation of government programs and regulations will be taught and applied to current consumer-protection policies.l

## CE\&H 899 Master's Thesis and Research

Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.

> Graduate faculty.

CE\&H 999 Doctoral Thesis and Research
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional.

Graduate faculty.

## DESIGN AND ENVIRONMENTAL ANALYSIS COURSES

W. R. Sims, chair; F. D. Becker, graduate faculty representative; M. Boyd, undergraduate advising coordinator; A. Basinger, S. Danko, P. Eshelman, G. Evans, K. Gibson, A. Hedge, J. Jennings, J. Laquatra, L. Maxwell, E. Schrank

Note: A minimal charge for photocopied course handouts may be required.

## DEA 101 Design I: Fundamentals

Fall. 3 credits. Each section limited to 18 students. Permission of instructor required. Priority given to interior design majors. Option I majors must take DEA 101 in fall. Approximate cost of materials, $\$ 60$. Fall: M W 1:25-4:25, or T R 10:10-1:10.

A studio course introducing the fundamental vocabulary and principles of two-dimensional design. Students experiment with the development of form through problem-solving approaches.

DEA 102 Design II: Fundamentals Spring. 2 credits. Permission of instructor required. Option I DEA majors only. B- or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $\$ 200$; shop fee, $\$ 10$.

T R 1:25-4:25. P. Eshelman
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

## DEA 111 Introduction to Design

Fall. 3 credits. Limit 300.
M W F 12:20-1:10. Staff.
Introduction to the field of design for students in any academic area. The course reviews the spectrum of design activities, examining various movements in design and differences among designers in philosophical premises, social and functional roles, and cultural positions. Also examined are how requirements in the built environment are affected by the interaction of people, design, and materials. Lectures and visual material are presented by DEA faculty members and visiting design professionals.
DEA 115 Drawing for Interior Design
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $\$ 100$. Permission of instructor only.

T R 10:10-1:10. P. Eshelman.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

## DEA 143 Inside Out: The American

 Everyday InteriorSpring (alternate years). 3 credits. S-U option.

T R 10:10-11:30. J. Jennings. A study of late nineteenth- and twentiethcentury everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns, and gender issues. Topics include women's walls, power in the parlor, photographs as a mirror, the love of the colonial.

## DEA 150 Introduction to HumanEnvironment Relations

## Spring. 3 credits.

M W F 12:20-1:10. G. Evans. Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; userresponsive design; participatory design programming; and post occupancy evaluation.

## DEA 201 Design III: Basic Interior Design

Fall. 5 credits. Limited to 18 students. Prerequisites: DEA 101,102, and 115 (minimum grades of $\mathrm{B}-$.) Recommended: DEA 111 and 150 . Coregistration in DEA 203 and DEA 251 is required. Minimum cost of materials, $\$ 150$; shop fee, $\$ 10$; optional field trip, approximately $\$ 100$; diazo machine fee, \$8.

M W F 1:25-4:25. J. Jennings. Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interiorproduct design problems of 3 to 5 weeks in length.

DEA 202 Design IV: Basic Interlor Design Spring. 5 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $\$ 120$; diazo machine fee, $\$ 8$; field trip fee.

T R 12:20-4:25. Staff
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

## DEA 203 Design Communications

Fall. 1 credit. Priority given to DEA majors. Lab fee $\$ 10$.

T R 11:15-12:05. S. Danko.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

## DEA 204 Introduction to Building Technology

Spring. 1 credit.
M 2:30-4:25. W. Sims.
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

## DEA 250 The Environment and Social Behavior

Fall. 3 credits. Prerequisite: DEA 150 or permission of instructor.

T R 2:30-4:00. G. Evans. A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

## DEA 251 History and Theory of Interior Design

Fall. 3 credits. Prerequisites: DEA 101 and 111.

M W F 9:05-9:55. J. Jennings.
An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements and theorists. Reading, discussion, analytical exercises, essays, examinations. Field trip.

## DEA 300 Special Studies for

 UndergraduatesFall or spring. Credit to be arranged.
Hours to be arranged. Department faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

## DEA 301 Design V: Intermediate Interior Design

Fall. 5 credits. Prerequisites: DEA 111,150, 201, 202, 203, and 204. Corequisite: DEA 303 and 459. Minimum cost of materials, $\$ 150$; shop fee, $\$ 10$; optional field trip, approximately $\$ 100$; diazo machine fee, $\$ 8$.

M W F 1:25-4:25. P. Eshelman.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

## DEA 302 Design VI: Intermediate

 Interior DesignSpring. 4 credits. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisites: DEA 304 and DEA 305. Minimum cost of materials, $\$ 150$; shop fee, $\$ 10$; diazo machine fee, $\$ 8$.

M W F 1:25-4:25. K. Gibson. Intermediate-level interior design studio with an introduction to computer applications. Emphasis on using the microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to a selection of problem types.

## DEA 303 Introduction to Furnishings, Materials, and Finishes

## Fall. 1 credit.

T 2:30-4:25. P. Eshelman.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings materials and finishes for typical interior design and facility management problems.

## DEA 304 Introduction to Professional

 Practice of Interior Design Spring. 1 credit.T 2:30-4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers
