

Types of Metadata

I'm not an expert.

Technical Metadata

What I usually see...

Metadata Automation

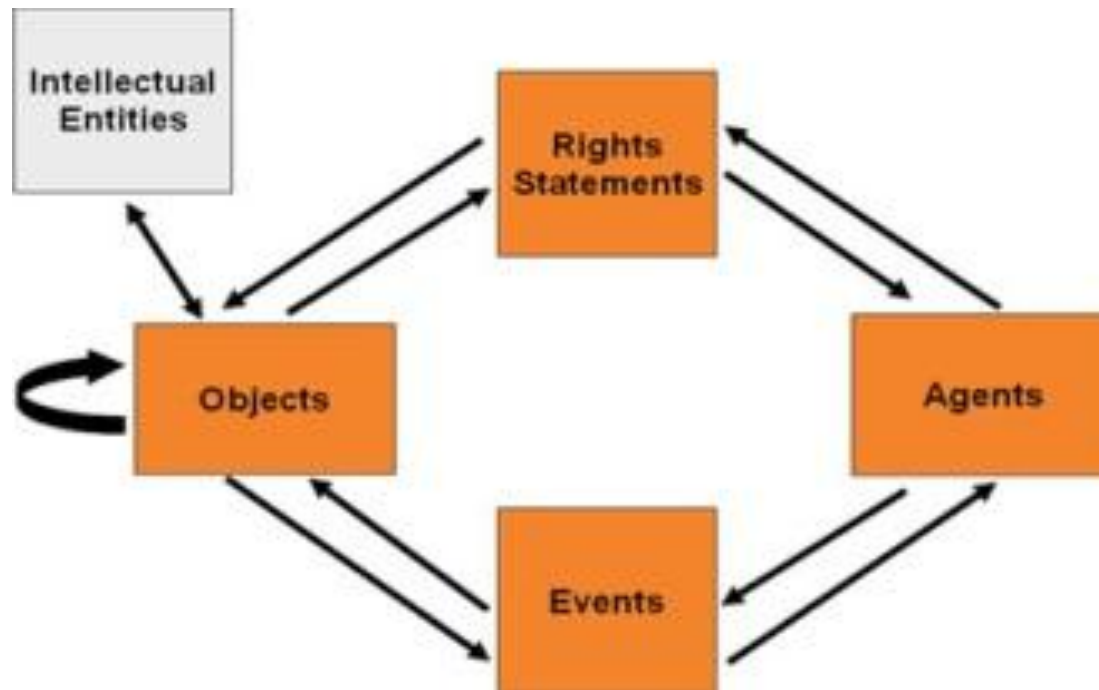

Preservation Metadata

The sum of information required to understand and use resources over time.

Examples:

- Technical information needed to render a resource
- Rights and access information
- Documentation on the creation process and any changes made to the resource during digitization or preservation
- Contextual information about the object
- Level of preservation commitment (e.g. bit level, text only)
- Inhibitors to preservation success

Preservation Metadata: Implementation Strategies (PREMIS)

The Sum of Information
