# CLONING – PLASMID VECTOR

# CLONING – identifying transformed cells

# VECTORS

Vector	Form	Host	Carrying Capacity	Major Uses
Plasmid	Double-stranded circular DNA	<i>E. coli</i>	Up to 15 kb	cDNA libraries; subcloning
Bacteriophage lambda	Virus – linear DNA	<i>E. coli</i>	Up to 25 kb	Genomic and cDNA libraries
Cosmid	Double-stranded circular DNA	<i>E. coli</i>	30 – 45 kb	Genomic libraries
Bacteriophage P1	Virus – circular DNA	<i>E. coli</i>	70 – 90 kb	Genomic libraries
BAC	Bacterial artificial chromosome	<i>E. coli</i>	100 – 500 kb	Genomic libraries
YAC	Yeast artificial chromosome	Yeast	250 – 2000 kb	Genomic libraries

# *What is bioinformatics?*

Research, development or application of computational tools and approaches to expand the use, acquisition, visualization, analysis, organization and archiving of biological, medical, behavioral or health data.

*[Bioinformatics at the NIH, 2001]*

<http://grants.nih.gov/grants/bistic/bistic.cfm>

# Important databases in the public domain

- National Center for Biotechnology Information (NCBI)  
<http://www.ncbi.nlm.nih.gov>
- European Bioinformatics Institute (<http://www.ebi.ac.uk/>)
- European Molecular Biology Laboratory (<http://www.embl.org>)
- DNA Data Bank of Japan (<http://www.ddbj.nig.ac.jp/Welcome.html>)
  - TIGR (<http://www.tigr.org>)

# The National Center for Biotechnology Information (NCBI)

*Created in 1988 ( National Library of Medicine at NIH)*

- Establish public databases
- Conduct research in computational biology
- Develop software tools for sequence analysis
- Disseminate biomedical information

# NCBI database types

Human genes/genetic disorders

<http://www.ncbi.nlm.nih.gov/entrez/query.fcgi?db=OMIM>

# NCBI database types

- Sequence (nucleotide; protein)
- Taxonomy
- Genome  
<http://www.ncbi.nlm.nih.gov>
- Gene
- Expression
- Structure

# Types of Sequence Databases

## Primary Databases

- Contain raw and redundant data: original experimental sequences, submitted and “owned” by experimentalists
  - Database staff review and organize the data: don’t add, modify or update the records
- *Examples:* GenBank, SNP, GEO

# Types of Sequence Databases

## Derivative Databases

- **Human-curated** (data compilation and correction)
  - *Examples:* LocusLink, OMIM & Literature databases
- **Computationally-Derived** (auto-partitioning GenBank seqs)
  - *Example:* UniGene
- **Combination**
  - *Examples:* RefSeq, Genome Assembly

# 1º Sequence Database

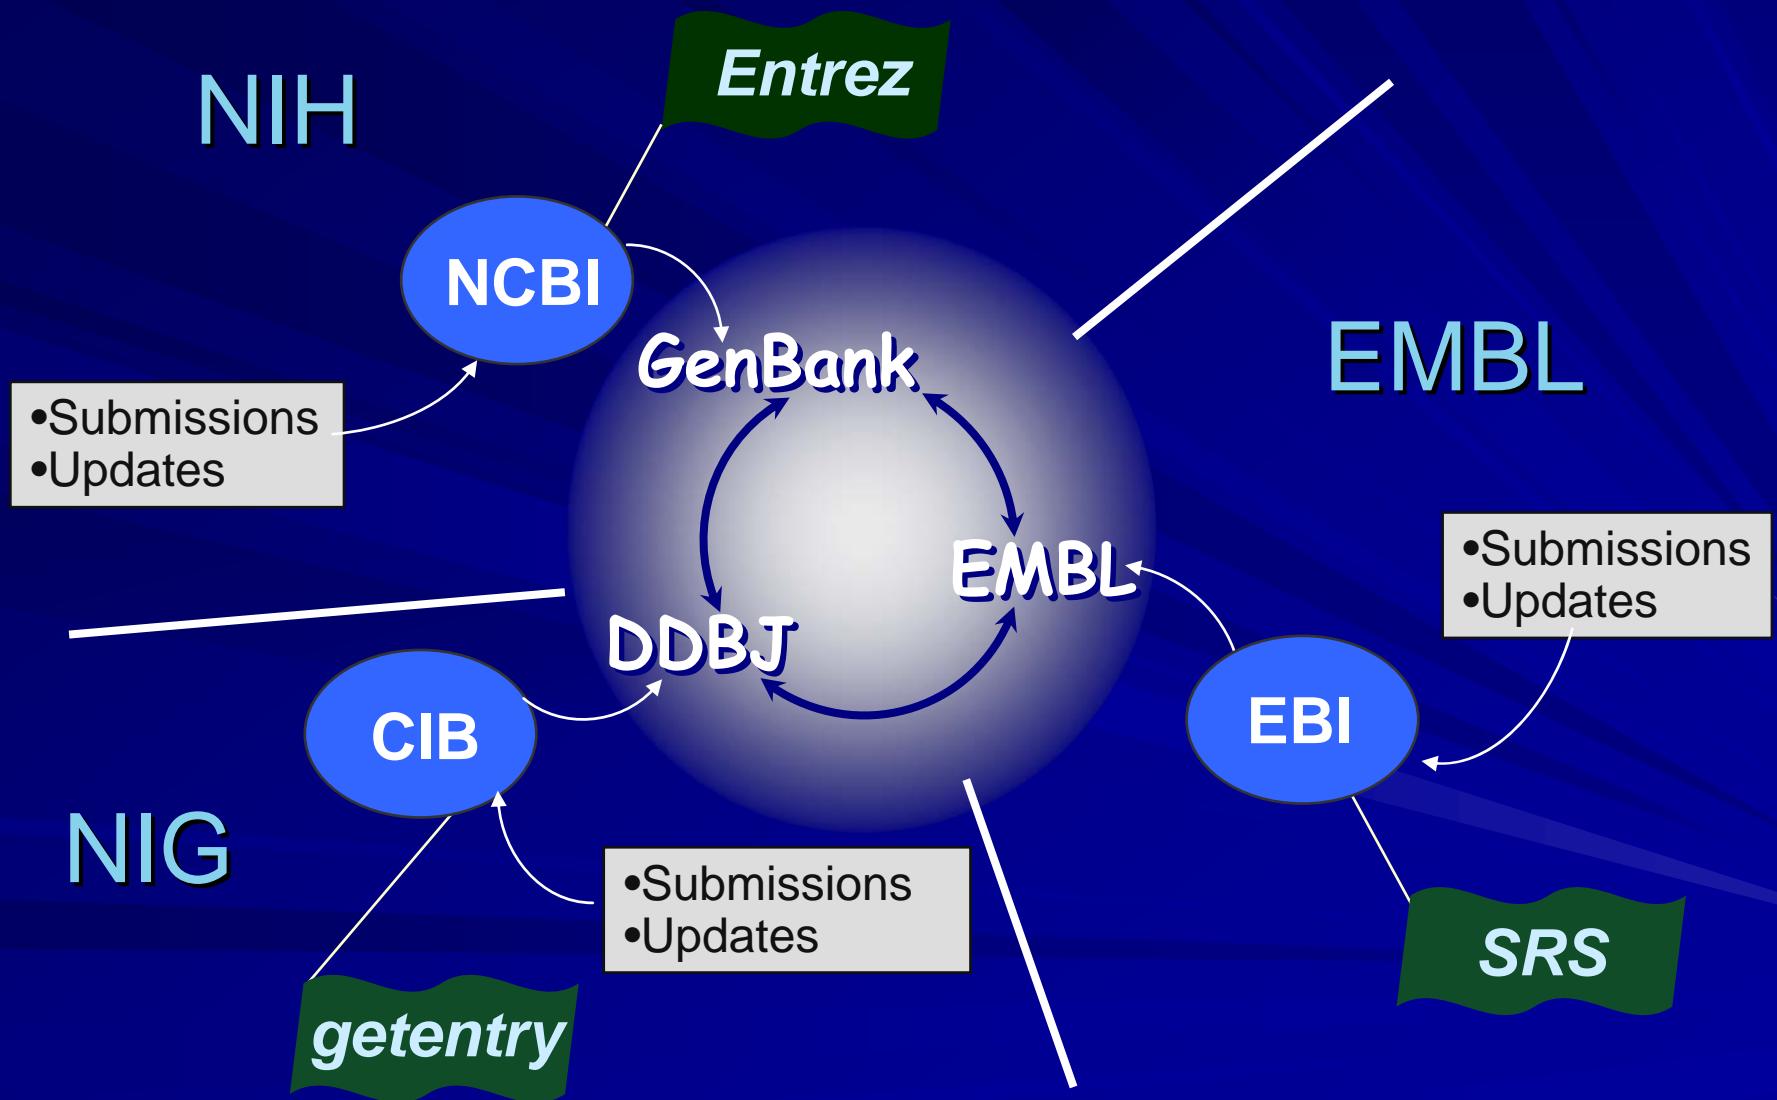

GenBank

- Nucleotide-only sequence database
- Archival (>292,000 organisms)

## Submission of GenBank Data to NCBI:

- Direct submissions of individual records via Web  
(*BankIt, Sequin*)
- Batch submissions of bulk sequences via e-mail  
(*EST, dbGSS, dbSTS*)
- FTP accounts for sequencing centers

# The International Sequence Database Collaboration

Check for cross-functionality of accession numbers

Accession no. AB062786

EBI: <http://www.ebi.ac.uk>

DDBJ: <http://www.ddbj.nig.ac.jp/>

# Organization of GenBank: GenBank Divisions (gbdiv)

Records are divided into 18 divisions:

- 1 Patent
- 5 High Throughput
- 12 Traditional

## Traditional Divisions:

### Bulk Divisions:

- Batch Submission  
(Email and FTP)
- Inaccurate
- Poorly characterized

EST	Expressed Sequence Tag
PRI	Primate
PLN	Plant and Fungal
BCT	Bacterial and Archaeal
INV	Invertebrate
ROD	Rodent
VRL	Viral
VRT	Other Vertebrate
MAM	Mammalian (ex. ROD and PRI)
PHG	Phage
SYN	Synthetic (cloning vectors)
UNA	Unannotated
ENV	Environmental

### ► What does NCBI do?

Established in 1988 as a national resource for molecular biology information, NCBI creates public databases, conducts research in computational biology, develops software tools for analyzing genome data, and disseminates biomedical information - all for the better understanding of molecular processes affecting human health and disease. [More...](#)

### ***HIV-1 Protein Interaction Database***

HIV/AIDS researchers can now access a database of known interactions of HIV-1 proteins with proteins from human hosts. The database offers a concise summary of these interactions with links to PubMed, sequence data, and genes. [Read more...](#)

- ▶ Entrez Home
- ▶ Entrez Tools
- ▶ Gene expression omnibus (GEO)
- ▶ Human genome resources

## e.g. - pharmacogenetics

- Identifying novel targets for new drugs
  - mapping and identifying genes associated w/ disease
  - characterizing proteins —→ targets for new drugs
- Identifying genetic variants associated w/ adverse drug reactions
  - e.g., cytochrome P450s = multigene family of enzymes (liver)
  - genetically variable expression = variation in drug efficacy

# Potential consequences of polymorphic drug metabolism

- Extended pharmacological effect
- Adverse drug reactions
- Lack of pro-drug activation (e.g., codeine)
- Drug toxicity
- Increased effective dose
- Metabolism by alternate, deleterious pathways
- Exacerbated drug – drug interactions

# Common pharmacogenetic polymorphisms in human drug metabolizing enzymes (Weber, W.W. *Pharmacogenetics*. Oxford, 1997)

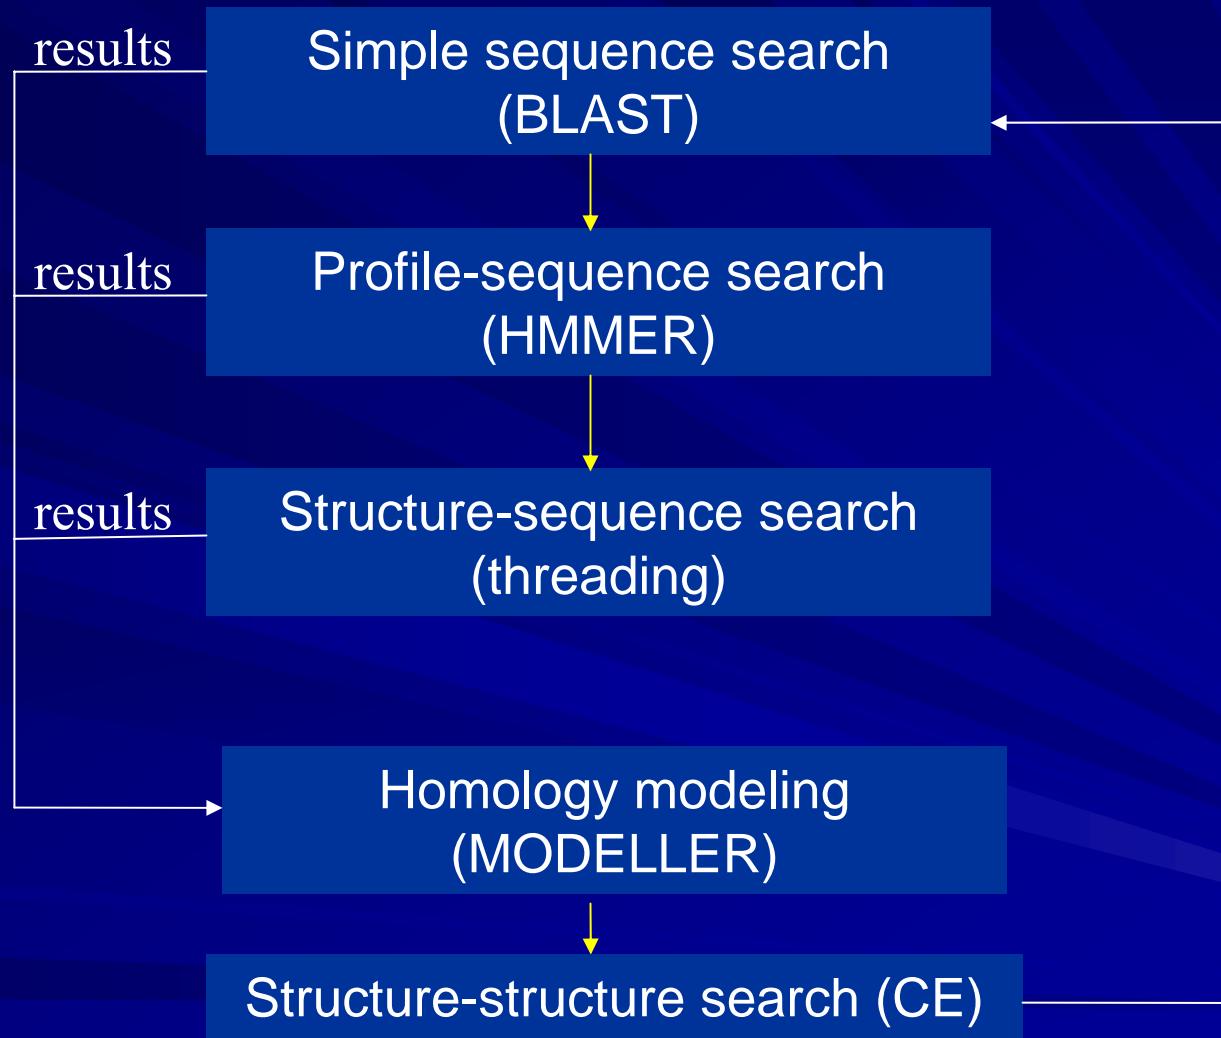

Gene	Metaboliser Phenotype	Frequency	# of drugs	Examples
CYP2D6	Poor	White 6%, African American 2%	>100	codeine, dextromethorphan
	Ultra-rapid	Ethiopian 20%, Spanish 7%		
CYP2C9	Reduced		>60	Ibuprofen, warfarin
TPMT	Poor	low in all populations	<10	6-mercaptopurine, 6-thioguanine

## Example: Cytochrome P450 gene - CYP2D6

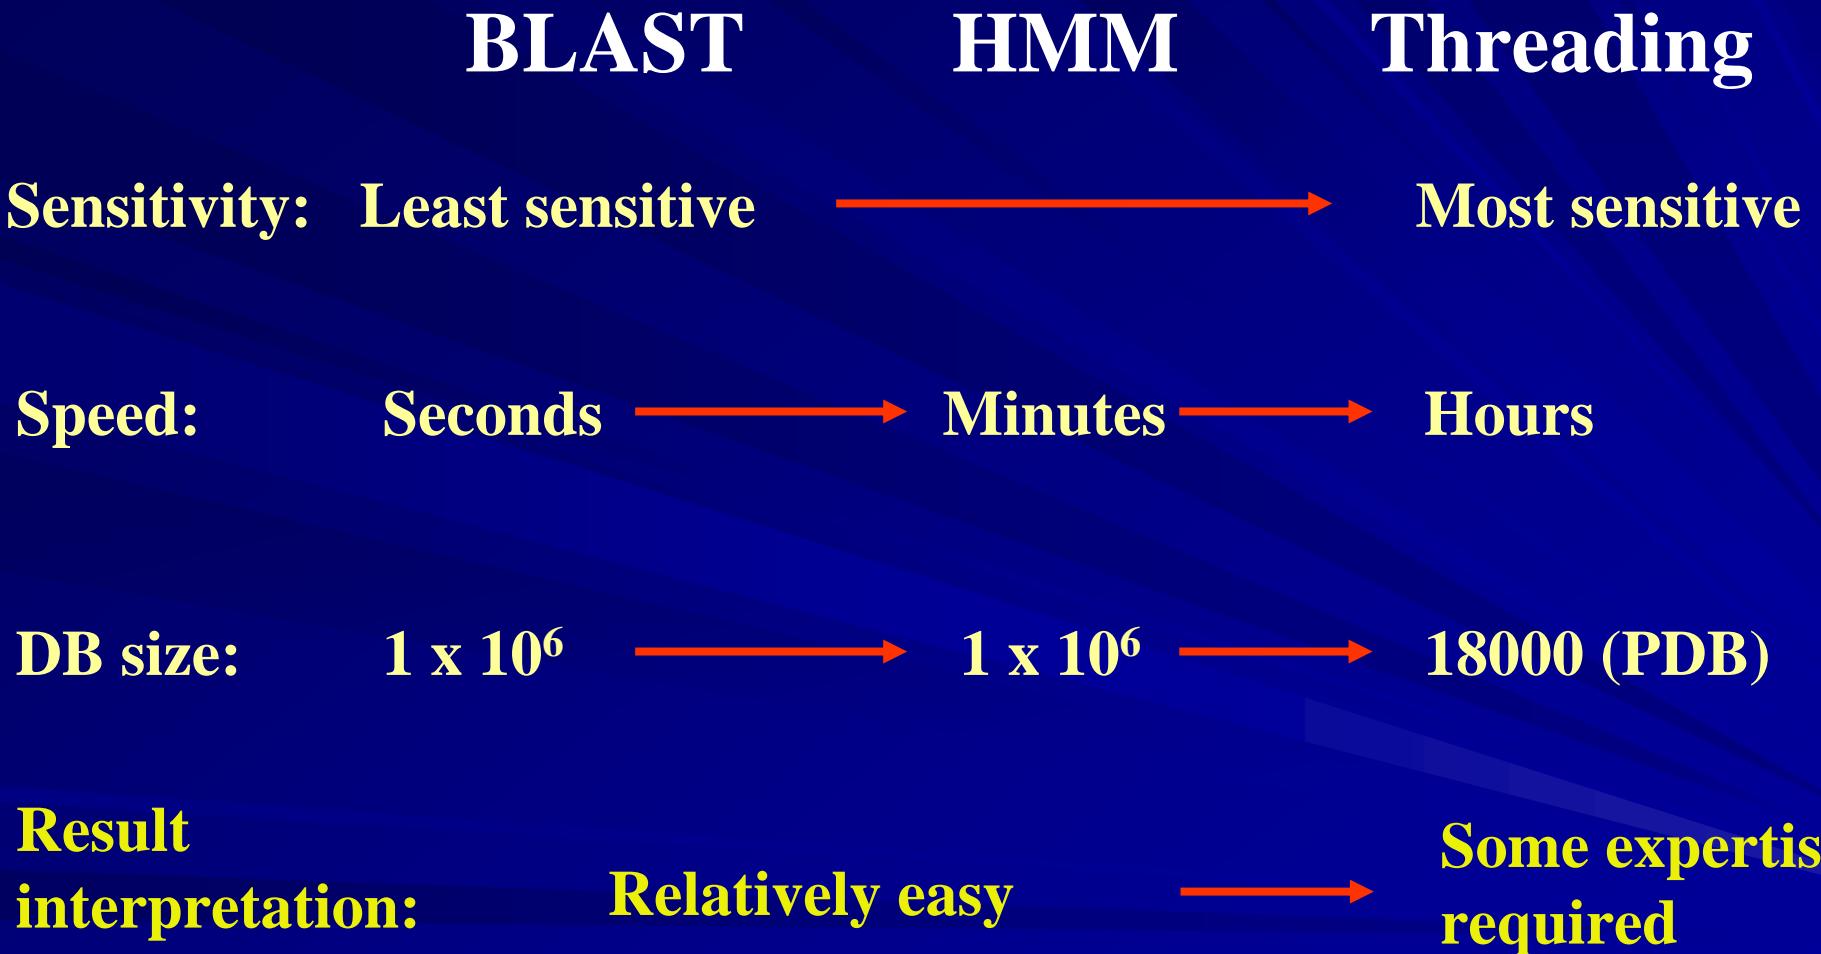

- CYP2D6 is highly polymorphic (inactive in ~ 6% of Caucasians)
  - codes for debrisoquine hydroxylase

<http://www.ncbi.nlm.nih.gov/>

# Sequence/structure searching tools

# Tool comparison

# Sequence similarity searching

## Why do it?

- identify and annotate sequences with no, incomplete, incorrect annotations (GenBank)
- infer functionality for genes/proteins
- find conserved domains
- assemble genomes; clean up sequences  
(e.g., suspected cloning vector sequences)
- explore evolutionary relationships

**NOTE:** Similar sequences may NOT be homologous!

# Basic Local Alignment Search Tool (BLAST)

- Calculates similarity for biological sequences
- Finds best local alignments
- Searches for matching “words” rather than individual residues
- Uses statistical theory to determine if a match might have occurred by chance

# Sequence Alignment

Global alignment: compare sequences over entire length  
(dynamic – e.g., Needleman-Wunsch)

- identify long insertions/deletions
- check data quality

Local alignment: compare segments of sequences  
(heuristic -- BLAST; FASTA; Smith-Waterman)

- high quality alignments

Dot plot: exploration of two entire sequences for similarity

- repeat discovery
- identify long insertions/deletions

# Basic Local Alignment Search Tool (BLAST)

<http://www.ncbi.nlm.nih.gov/BLAST/>

# BLAST

# What is BLAST?

AATTGGCTAGCTAA  
| | | | | | |  
...AAAAATGCAAAATGC~~G~~GGTAGCTTATTCTAGAAGATT...

Matches: 10

Mismatches: 4

Similarity score based on matches, mis-matches, gaps

	A	C	D	E	F	G	H	
A	4	0	-2	-1	-2	0	-2	
C	0	9	-3	-4	-2	-3	-3	
D	-2	-3	6	2	-3	-1	-1	
E	-1	-4	2	5	-3	-2	0	
F	-2	-2	-3	-3	6	-3		
G	0	-3	-1	-2	-3			
H	-2	-3	-1	0				

BLOSUM 62

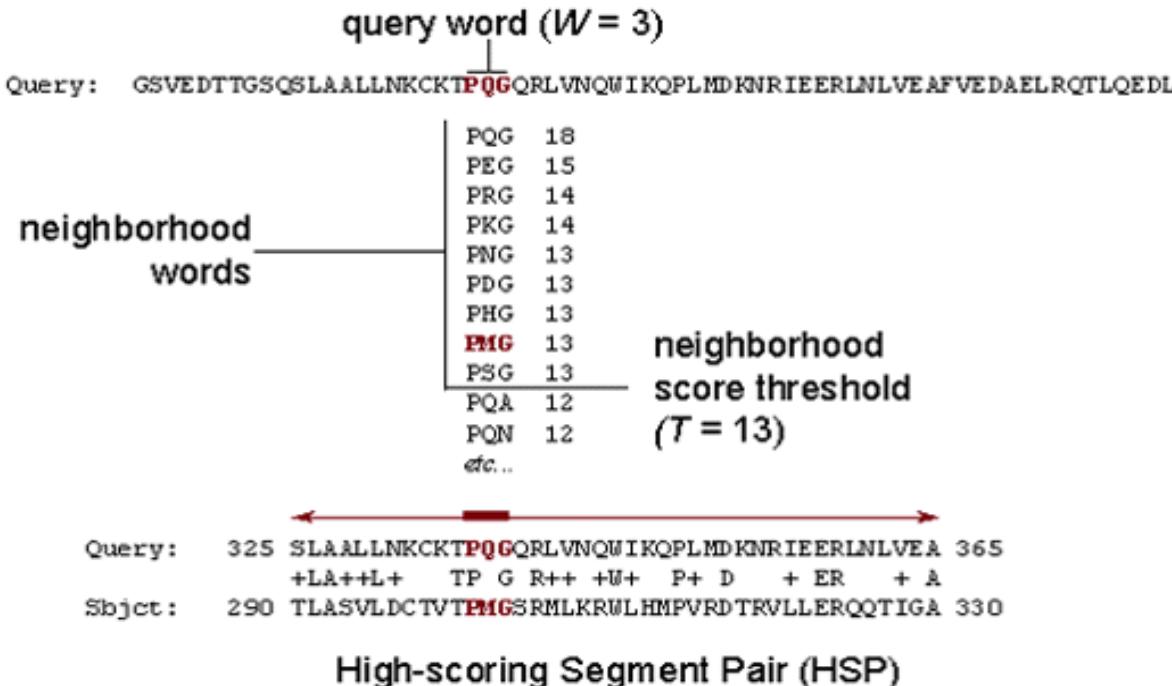

# BLAST: Substitution Matrix and Gap Cost

Query Length	Substitution Matrix	Gap cost
<35	PAM-30*	(9,1)
35-50	PAM-70	(10, 1)
50-85	BLOSUM-80	(10, 1)
>85	BLOSUM-62	(11, 1)

\*PAM = Percent Accepted Mutation; 1 PAM unit = 1% of aa in protein changed

- BLOSUM-62 generally performs better than PAM
- PAM better if looking for distant relationships

# The BLAST Search Algorithm

- matrix used to create look-up tables of neighborhood words
- seeks pairs of similar segments whose score exceeds threshold (HSPs)
  - $T < 13$  not reported
  - locates “seeds” of similarity along query
  - extends seeds in both directions until max. possible score reached

# Protein Words

## BLAST: Bit Score

Bit Score ( $S'$ ) : normalized raw score (S), allows direct comparison of searches from diverse dbs

$$S' = (\lambda S - \ln K) / \ln 2$$

$S$  = raw score (sum of scores in substitution)

$K$  = variable; value dependent on matrix used

$\lambda$  = parameter used as natural scale for scoring system

# BLAST Statistics: E-value

E-value (E) : measure of statistical significance

e.g.,  $E=0.01 \rightarrow 1\%$  chance that match is due to a random event; dependent on db size

$$E = Kmne^{-\lambda S}$$

K = variable; value dependent on matrix used

m = length of query (nucleotide or aa)

n = size of db

$\lambda$  = parameter used as natural scale for scoring system

S = raw score (sum of scores in substitution)

# Tools for 3-D Structure Display and Searching

Cn3D: 3-D structure and sequence alignment viewer

- NCBI “Structure” db

Domain Architecture Retrieval Tool (DART):

- displays functional domains that make up a protein
- lists proteins with similar domain architectures

Vector Alignment Search Tool (VAST):

- structure-structure similarity search program

Threading: algorithms for recognition of protein folding

## Welcome to the new Entrez cross-database search page

 <b>PubMed:</b> biomedical literature citations and abstracts	 <b>Books:</b> online books	
 <b>PubMed Central:</b> free, full text journal articles	 <b>OMIM:</b> Online Mendelian Inheritance in Man	

 <b>Nucleotide:</b> sequence database (GenBank)	 <b>UniGene:</b> gene-oriented clusters of transcript sequences	
 <b>Protein:</b> sequence database	 <b>CDD:</b> conserved protein domain database	
 <b>Genome:</b> whole genome sequences	 <b>3D Domains:</b> domains from Entrez Structure	
 <b>Structure:</b> three-dimensional macromolecular structures	 <b>UniSTS:</b> markers and mapping data	
 <b>Taxonomy:</b> organisms in GenBank	 <b>PopSet:</b> population study data sets	
 <b>SNP:</b> single nucleotide polymorphism	 <b>GEO Profiles:</b> expression and molecular abundance profiles	
 <b>Gene:</b> gene-centered information	 <b>GEO DataSets:</b> experimental sets of GEO data	
 <b>HomoloGene:</b> Eukaryotic homology groups	 <b>Cancer Chromosomes:</b> cytogenetic databases	

 <b>Journals:</b> detailed information about the journals indexed in PubMed and other	 <b>MeSH:</b> detailed information about NLM's controlled vocabulary

Thiopurine S-methyltransferase (TPMT). This family consists of thiopurine S-methyltransferase proteins from both eukaryotes and prokaryotes. Thiopurine S-methyltransferase (TPMT) is a cytosolic enzyme that catalyses S-methylation of aromatic and heterocyclic sulphydryl compounds, including anticancer and immunosuppressive thiopurines.
