## 1989 DAIRY FARM BUSINESS SUMMARY WESTERN PLATEAU REGION\*

### INTRODUCTION

Dairy farmers throughout New York State have been participating in Cornell Cooperative Extension's farm business summary and analysis program since the early 1950's. Each participating farmer receives a comprehensive business summary and analysis of his or her farm business. The information in this report represents an average of the data submitted from farms in the Western Plateau region.

#### Program Objective

The primary objective of the dairy farm business summary, DFBS, is to help farm managers improve the business and financial management of their farm through appropriate use of historical farm data and the application of modern farm business analysis techniques. In short, DFBS identifies the business and financial information farmers need and demonstrates how it should be used in identifying and evaluating strengths and weaknesses of the farm business.

#### Format Features

This regional report follows the same general format as in the 1989 DFBS printout received by all participating dairy farmers. Worksheets are included to give non-DFBS participants an opportunity to summarize their businesses. The analysis tables have an open column or section labeled My Farm. It may be used by any dairy farm manager who wants to compare his or her business with the average data of this region.

This report features:

- (1) an income statement including accrual adjustments for farm business expenses and receipts, as well as measures of profitability with and without appreciation,
- (2) a complete balance sheet with analytical ratios,
- (3) a cash flow summary including debt repayment ability,
- (4) a cropping analysis,
- (5) a dairy analysis, and
- (6) capital and labor efficiency analysis.

Micro DFBS, a computer program which enables Cooperative Extension agents and specialists to calculate and print individual farm business reports in their offices, is now being used by the dairy farm management field staff for 90 percent of the farms cooperating. This innovative approach provides faster processing of farm record data and increased use of the DFBS in farm management programs.

---

\*This summary was prepared by George L. Casler, Department of Agricultural Economics, New York State College of Agriculture and Life Sciences, Cornell University, in cooperation with Cooperative Extension Agents Andrew Dufresne, Davis Hill, Joan Petzen, and Paul Westfall. The Western Plateau Region is comprised of Allegany, Cattaraugus, Chautauqua, and Steuben Counties. Linda Putnam was in charge of the data handling at Cornell.

## SUMMARY AND ANALYSIS OF THE FARM BUSINESS

Business Characteristics

Finding the right management strategies is an important part of operating a successful farm. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers in this region. The following table shows important farm business characteristics and the number of farmers reporting these characteristics.

BUSINESS CHARACTERISTICS  
60 Western Plateau Region Dairy Farms, 1989

<u>Type of Farm</u>	<u>Number</u>	<u>Type of Barn</u>	<u>Number</u>
Dairy	60	Stanchion/Tie-Stall	34
Part-time dairy	0	Freestall	21
Dairy cash-crop	0	Combination	5
Part-time cash-crop dairy	0		
<u>Type of Ownership</u>	<u>Number</u>	<u>Milking System</u>	<u>Number</u>
Owner	56	Bucket & carry	1
Renter	4	Dumping station	11
		Pipeline	25
<u>Type of Business</u>	<u>Number</u>	Herringbone parlor	21
Single proprietorship	43	Other parlor	2
Partnership	14		
Corporation	3	<u>Milking Frequency</u>	<u>Number</u>
<u>Business Record System</u>	<u>Number</u>	2x/day	56
ELFAC	6	3x/day	2
Account Book	30	Other	2
Agrifax (mail-in only)	7		
On-Farm Computer	6	<u>Production Records</u>	<u>Number</u>
Other	11	DHIC	41
		Owner-Sampler	10
		Other	2
		None	7

The averages used in this report were compiled using data from all the participating dairy farms in this region unless noted otherwise. There are full-time dairy farms, part-time farms, dairy cash-crop farms, farm renters, partnerships, and corporations included in the average. These specific classifications are used to separate farms in the State Business Summary.

Income Statement

In order for an income statement to accurately measure farm income, it must include cash transactions and accrual adjustments (changes in accounts payable, accounts receivable, inventories, and prepaid expenses).

Cash paid is the actual cash paid during the year and does not necessarily represent the cost of goods and services actually used.

Change in inventory: An increase in inventory is subtracted in computing accrual expenses because it represents purchased inputs not actually used during the year. A decrease in inventory is added to expenses because it represents the cost of inputs purchased in a prior year and used this year.

CASH AND ACCRUAL FARM EXPENSES  
60 Western Plateau Region Dairy Farms, 1989

Expense Item	Cash Paid	Change in Inventory or Prepaid Expense*	Change in Accounts Payable	Accrual Expenses
<u>Hired Labor</u>	\$ 16,420	\$ -11	\$ 0	\$ 16,409
<u>Feed</u>

Auto exp. (farm share)	1,087	0	0	1,087
Fuel, oil & grease	4,875	-24	-115	4,736
<u>Livestock</u>				
Replacement livestock	1,901	0	158	2,059
Breeding	2,222	-40	-2	2,180
Vet & medicine	3,394	-4	8	3,398
Milk marketing	5,899	0	-1	5,898
Cattle lease/rent	587	0	-8	579
Other livestock expense	7,065	60	-15	7,110
<u>Crops</u>				
Fertilizer & lime	6,664	-542	22	6,144
Seeds & plants	3,054	-247	13	2,820
Spray, other crop exp.	2,262	-89	-1	2,172
<u>Real Estate</u>				
Land/bldg./fence repair	2,460	-18	55	2,497
Taxes	4,723	0	47	4,770
Rent & lease	3,323	0	0	3,323
<u>Other</u>				
Insurance	2,992	0	-6	2,986
Telephone (farm share)	473	0	0	473
Electricity (farm share)	4,760	0	-1	4,759
Interest paid	10,773	0	137	10,910
Miscellaneous	2,579	-19	17	2,577
Total Operating	\$153,018	\$ -1,124	\$ 372	\$152,266
Expansion livestock	973	0	0	973
Machinery depreciation				11,801
Building depreciation				6,445
TOTAL ACCRUAL EXPENSES				\$171,485

Changes in prepaid expenses are a net change in non-inventory expenses that have been paid in advance of their use, for example, 1990 rent paid in 1989. If 1989 funds used to prepay 1990 rent exceeded the amount of 1989 rent prepaid in 1988, the amount of this excess is entered as a negative number to exclude it from 1989 rental expenses. The excess prepaid rent should be charged against the future year's business operation. A decrease in prepaid rent is added to expenses because it represents use of resources during this year that were paid for in past years but should be charged against this year's operation.

Change in accounts payable: An increase in accounts payable from beginning to end of year is added and a decrease is subtracted when calculating accrual expenses.

Accrual expenses are the costs of inputs actually used in this year's production. They are the total of cash paid, changes in inventory or prepaid expenses, and changes in accounts payable.

Other	2,121				0		2,121
Less nonfarm noncash cap.**		(-)	0			(-)	0
Total Accrual Receipts	\$197,088		\$ 1,164		\$ 2,900		\$201,153

\*Change in advanced government receipts.

\*\*Gifts or inheritances of cattle or crops included in inventory.

Cash receipts include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

Changes in inventory are calculated by subtracting beginning of year values from end of year values excluding appreciation. Increases in livestock inventory caused by herd growth and/or quality are added, and decreases caused by herd reduction and/or quality are subtracted. Changes in inventories of crops grown are also included. Changes in advanced government receipts are calculated by subtracting the end year balance from the beginning year balance (balances are listed with the current liabilities on the Balance Sheet).

Changes in accounts receivable are calculated by subtracting beginning year balances from end year balances. The January milk check for this December's marketings compared with the previous January's check is included as a change in accounts receivable.

Accrual receipts represent the value of all farm commodities produced and services actually generated by the farmer during the year.

### Profitability Analysis

Farm operators contribute labor, management, and capital to their businesses and the best combination of these resources maximizes income. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed both with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of live-stock, machinery, real estate inventory, and stocks and certificates (other than FLB and PCA). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

#### NET FARM INCOME 60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
Total accrual receipts	\$201,153	\$ _____
Appreciation: Livestock	9,480	_____
Machinery	3,078	_____
Real Estate	5,726	_____
Other Stock/Certificates	-21	_____
Total Including Appreciation	\$219,416	\$ _____
Total accrual expenses	-171,485	- _____
Net Farm Income (with appreciation)	\$ 47,931	\$ _____
Net Farm Income (without appreciation)	\$ 29,668	\$ _____

Return to operators' labor, management, and equity capital measures the total net farm income for the farm operator(s). It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been calculated both with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

#### RETURN TO OPERATORS' LABOR, MANAGEMENT, AND EQUITY 60 Western Plateau Region Dairy Farms, 1989

Item	Average		My Farm	
	With Apprec.	Without Apprec.	With Apprec.	Without Apprec.
Net farm income	\$ 47,931	\$ 29,668	\$ _____	\$ _____
Family labor unpaid @ \$750 per month	- 2,825	- 2,825	- _____	- _____
Return to operators' labor, management, & equity	\$ 45,106	\$ 26,843	\$ _____	\$ _____

Labor and management income is the return which farm operators receive for their labor and management used in operating the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting the opportunity cost of using equity capital at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge of five percent reflects the long-term average rate of return above inflation that a farmer might expect to earn in comparable risk investments.

LABOR AND MANAGEMENT INCOME  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
Return to operators' labor, management, & equity without appreciation	\$ 26,843	\$ _____
Real interest @ 5% on \$320,702 average equity capital	- 16,035	- _____
Labor & Management Income	\$ 10,808	\$ _____
Labor & Management Income per 1.24 Operator/Manager	\$ 8,716	\$ _____

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets to calculate the rate of return on total capital.

RETURN ON EQUITY CAPITAL AND RETURN ON TOTAL CAPITAL  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
Return to operators' labor, management, & equity capital with appreciation	\$ 45,106	\$ _____
Value of operators' labor & management	- 22,307	- _____
Return on equity capital with appreciation	\$ 22,799	\$ _____
Interest paid	\$ 10,910	\$ _____
Return on total capital with appreciation	\$ 33,709	\$ _____
Return on equity capital without appreciation	\$ 4,536	\$ _____
Return on total capital without appreciation	\$ 15,446	\$ _____
Rate of return on average equity capital:		
with appreciation	7.1%	_____ %
without appreciation	1.4%	_____ %
Rate of return on average total capital:		
with appreciation	7.5%	_____ %
without appreciation	3.4%	_____ %

Farm and Family Financial Status

The first step in evaluating the financial position of the farm is to construct a balance sheet which identifies all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

1989 FARM BUSINESS & NONFARM BALANCE SHEET  
60 Western Plateau Region Dairy Farms, 1989

Total Nonfarm	\$ 45,083	\$ 49,616		\$352,904	\$379,834

\*Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business. For 1989, leases were discounted by 11.5 percent.

Advanced government receipts are included as current liabilities. Government payments received in 1989 that are for participation in the 1990 program are the end year balance and payments received in 1988 for participation in the 1989 program are the beginning year balance.

Balance sheet analysis involves examination of relative asset and debt levels for the business. Percent equity is calculated by dividing end of year net worth by end of year assets. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect business solvency and the potential capacity to borrow. Debt levels per productive unit represent old standards that are still useful if used with measures of cash flow and repayment ability. The change in farm net worth without appreciation is an excellent indicator of farm generated financial progress.

BALANCE SHEET ANALYSIS  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
<u>Financial Ratios - Farm:</u>

Intermediate & current debt	874	_____

Farm inventory balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

FARM INVENTORY BALANCE

\*\*Excludes -\$25 of appreciation on assets sold during the year.

Cash Flow Statement

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The annual cash flow statement is structured to compare all the cash inflows with all the cash outflows for the year. A complete list of cash inflows and cash outflows are identified in the following table. By definition, total cash inflows must equal total cash outflows when beginning and ending balances are included. Any imbalance is, therefore, the error from incorrect accounting of cash inflows and cash outflows. Whenever an imbalance exists, all other financial measures may also be in error.

ANNUAL CASH FLOW STATEMENT  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
<u>Cash Inflows</u>

Ending farm cash, checking & savings	6,262	_____
Total	\$227,216	\$ _____
Imbalance (error)	\$ 3,611	\$ _____

Repayment Analysis

The second step in cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 1990. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 1990 debt payments shown below.

FARM DEBT PAYMENTS PLANNED  
Same 44 Western Plateau Region Dairy Farms, 1988 & 1989

Debt Payments	Average			My Farm		
	1989 Payments Planned	Made	Planned 1990	1989 Payments Planned	Made	Planned 1990
Long-term	\$ 10,708	\$ 10,622	\$ 10,079	\$ _____	\$ _____	\$ _____
Intermediate-term	19,805	23,043	20,665	_____	_____	_____
Short-term	857	909	1,434	_____	_____	_____
Operating (net reduction)	367	0	662	_____	_____	_____
Accounts payable (net reduction)	470	1,595	436	_____	_____	_____
Total	\$ 32,207	\$ 36,170	\$ 33,277	\$ _____	\$ _____	\$ _____
Per cow	\$ 362	\$ 406		\$ _____	\$ _____	
Per cwt. 1989 milk	\$ 2.21	\$ 2.48		\$ _____	\$ _____	
Percent of total 1989 receipts	14%	15%		_____	_____	
Percent of 1989 milk receipts	15%	17%		_____	_____	

The cash flow coverage ratio measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of planned payments that could have been made with last year's available cash flow. Farmers who did not participate in DFBS last year will find in their report a cash flow coverage ratio based on planned debt payments for 1990.

CASH FLOW COVERAGE RATIO  
Same 44 Western Plateau Region Dairy Farms, 1988 & 1989

Item	Average	My Farm
Cash farm receipts	\$231,658	\$ _____
- Cash farm expenses	178,653	_____
+ Interest paid	12,426	_____
- Net personal withdrawals from farm**	22,651	_____
(A) = Amount Available for Debt Service	\$ 42,780	\$ _____
(B) = Debt Payments Planned for 1989 (as of December 31, 1988)	\$ 32,207	\$ _____
(A ÷ B) = Cash Flow Coverage Ratio for 1989	1.33	_____

\*\*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded, or inaccurately included, the cash flow coverage ratio will be incorrect.

\*\*Includes change in prepaid expenses.

\*\*\*Excludes change in interest account payable.

Cropping Analysis

The cropping program is an important part of the dairy farm business which is often inadequately managed. A complete evaluation of what the available land resources are, how they are being used, how well crops are producing, and what it costs to produce them is required to evaluate alternative cropping and feed purchasing choices.

LAND RESOURCES AND CROP PRODUCTION  
60 Western Plateau Region Dairy Farms, 1989

Item	Average			My Farm		
Land	<u>Owned</u>	<u>Rented</u>	<u>Total</u>	<u>Owned</u>	<u>Rented</u>	<u>Total</u>
Tillable	165	104	269	_____	_____	_____

Other crops	4	14		_____	_____	
Tillable pasture	20	26		_____	_____	
Idle	32	50		_____	_____	
Total Tillable Acres	59	269		_____	_____	

Average crop acres and yields compiled for the region are for the farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following measures of crop management indicate the relationship between forage production, forage production resources and the dairy herd.

CROP MANAGEMENT FACTORS  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
Total tillable acres per cow	3.47	_____
Total forage acres per cow	2.65	_____
Harvested forage dry matter, tons per cow	7.75	_____

Cropping Analysis (continued)

A substantial number of cooperators have allocated crop expenses among the hay crop, corn, and other crops produced. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for hay and corn. Additional expense items such as fuels, labor, and machinery repairs are not included.

CROP RELATED ACCRUAL EXPENSES

Dairy Analysis

Analysis of the dairy enterprise can tell a great deal about the strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. Any change in inventory is included as an accrual farm receipt when calculating all of the profitability measures on pages 6 and 7.

DAIRY HERD INVENTORY  
60 Western Plateau Region Dairy Farms, 1989

Item	Dairy Cows		Heifers		Calves	
	No.	Value	Bred No. Value	Open No. Value	No.	Value

Average number	___		___ (all age groups)					

Total milk sold and milk sold per cow are extremely valuable measures of productivity on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with their rolling herd average on the test date nearest December 31 to see how close the DHI estimate of milk produced is to actual milk sales.

MILK PRODUCTION  
60 Western Plateau Region Dairy Farms, 1989

Item	Average	My Farm
Total milk sold, lbs.	1,237,852	_____
Milk sold per cow, lbs.	15,986	_____
Average milk plant test, percent butterfat	3.70	_____

The cost of producing milk has been compiled using the whole farm method and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses including expansion livestock purchased. Total costs of producing milk include the operating costs of producing milk plus depreciation on machinery and buildings, the value of operators' labor and management, and the interest charge for using equity capital. Note that the cost of labor, management, and equity capital has been excluded in the intermediate calculation.

ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK  
60 Western Plateau Region Dairy Farms, 1989

Item	Average			My Farm		
	Total	Per Cow	Per Cwt.	Total	Per Cow	Per Cwt.

## COMPARATIVE ANALYSIS OF THE FARM BUSINESS

Progress of the Farm Business

Comparing your business with average data from regional DFBS co-operators that participated in both of the last two years is one part of a business checkup. It is equally important for you to determine the progress your business has made over the past two or three years and to set targets or goals for the future.

## PROGRESS OF THE FARM BUSINESS

### Farm Business Charts

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 406 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

The next section of the Farm Business Chart provides for comparative analysis of the value and costs of dairy production.

The profitability section shows the variation in farm income by decile and enables a dairy farmer to determine where he or she ranks by using several measures of farm profitability. Remember that each column is independently established and the farms making up the top decile in the first column will not necessarily be on the top of any other column. The dairy farmer who ranks at or near the top of most of these columns is in a very enviable position.

Farm Business Charts for farms with freestall barns and 120 cows or less and more than 120 cows, and farms with conventional barns with 60 cows or less and more than 60 cows are discussed in the section on pages 23-28.

### Financial Analysis Chart

The farm financial analysis chart is designed just like the Farm Business Chart and may be used to measure the financial health of the farm business. Most of the financial measures used in the chart are defined on pages 7, 10, 12, and 18 of this publication. References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

#### FINANCIAL ANALYSIS CHART 406 New York Dairy Farms, 1988

Liquidity (repayment)					
Debt Payments Made Per Cow (DFBS pg. 7)	Debt Payments as Percent of Milk Receipts (7)	Cash Flow Coverage Ratio (7)	Available for Debt Service Per Cow (11)	Debt Per Cow (5)

### Summarize Your Business Performance

The Farm Business and Financial Analysis Charts can be used to help identify strengths and weaknesses of your farm business. Identify three major strengths and three areas of your farm business that need improvement.

Strengths: \_\_\_\_\_ Need Improvement: \_\_\_\_\_

### Comparisons by Type of Barn and Herd Size

When analyzing a dairy farm business by comparing it to a group of farms, it is important that the group of farms used has as many of the same physical characteristics as possible as the farm being analyzed. To assist in this endeavor, dairy farms in the 1988 State Summary<sup>1</sup> have been divided into those with freestall and those with conventional housing. Within each group is a further classification by size of the dairy herd.

The table on page 24 shows the average values for the resulting four groups of dairy farms. Within each housing type, the larger herd size has the highest crop yields and pounds of milk sold per cow. The total cost of producing milk was lower on the larger farms and labor efficiency greater. Profitability was also greater on the larger farms within each housing type.

Farm business charts have been computed for each of the four housing and herd size categories. References to DFBS output page numbers for participating dairy farmers are provided in the table headings. From these charts on pages 25-28 the range in size of business, rates of production, labor efficiency, value and cost of producing milk, and profitability can be observed. The range in every category of business performance is tremendous.

By comparing the farm's performance on the most appropriate business chart, a farm manager will be better able to evaluate his or her business performance. Farm managers should remember, however, that their competition is not limited to the other farms in their own barn type and herd size category. They should observe how their management performance compares with farms in other categories as well.

### Herd Size Comparisons

A detailed comparison of profitability, financial situation, and business analysis factors across herd sizes is contained on pages 29-36. As herd size increases, the average profitability also increases (pages 29-30). Net farm income without appreciation was \$233,809 per farm for the 300 or more herd size group and \$12,875 per farm for those with less than 40 cows. This relationship holds for all measures of profitability including rate of return on equity capital.

As herd size increases, percent equity generally decreases (pages 31-34). However, farm net worth increases substantially as herd size increases. The average net worth for all size farms increased during 1988.

Crop yields generally increased as herd size increased, but fertilizer and lime expenses and machinery cost per tillable acre also increased (pages 35-36). Milk sold per cow generally increased as herd size increased, ranging from 15,833 pounds on the farms with 40 to 54 cows to 19,113 pounds on farms with 300 or more cows. Farm capital per worker increased as herd size increased, while farm capital per cow decreased as herd size increased. Cows per worker increased dramatically as herd size increased, ranging from 20 at the lowest herd size category up to 45 at the largest size category.

## IDENTIFY AND SET GOALS

If businesses are to be successful, they must have direction. Written goals help provide businesses with an identifiable direction over both the long and the short term. Goal setting is as important on a dairy farm as it is in other businesses. Written goals are a tool which farm operators can use to ensure that the business continues to move in the proper direction.

1. Goals should be specific.
2. Goals should be realistic and achievable.
3. The achievement of the goal should be verifiable.
4. You should designate a time when each goal will be achieved.

Goal setting on a dairy farm does not have to be a complex process. In many cases it provides a process for writing down and agreeing on goals that you have already given some thought to. It is also important to remember that once you write out your goals they are not cast in concrete. If a change takes place which has a major impact on the farm business, the goals should be reworked to accommodate that change. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both long and short range goals when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a general philosophy statement which incorporates both business and family goals.
- b. Identify 4-6 long range goals.
- c. Identify specific short range goals for a given time period (i.e., one year).

## Worksheet for Setting Goals

## I. General Philosophy and Objectives

---

---

---

---

---

---

---

## Worksheet for Setting Goals (continued)

## II. Long Range Goals (require two or more years to achieve)

[illegible]

III. Short Range Goals (possible to achieve in one or two years).

[illegible]

NOTE: Once long and short range goals have been identified, it is helpful to rank them in order of priority.
