

A Profile of the Working Poor, 2010

U.S. Department of Labor
U.S. Bureau of Labor Statistics
March 2012

Report 1035

This report, "A Profile of the Working Poor, 2010", was reissued on January 23, 2013 to reflect corrections to table 4. The analyses in this report were not affected by the corrections.

In 2010, according to the Census Bureau, about 46.2 million people, or 15.1 percent of the nation's population, lived below the official poverty level.¹ Although the poor were primarily children and adults who had not participated in the labor force during the year, 10.5 million individuals were among the "working poor" in 2010; this measure was little changed from 2009. The working poor are persons who spent at least 27 weeks in the labor force (that is, working or looking for work) but whose incomes still fell below the official poverty level. In 2010, the working-poor rate—the ratio of the working poor to all individuals in the labor force for at least 27 weeks—was 7.2 percent, also little different from the previous year's figure (7.0 percent). (See tables A and 1, and the chart.)

Following are additional highlights from the 2010 data:

- Full-time workers were less likely to be among the working poor than were part-time workers. Among persons in the labor force for 27 weeks or more, 4.2 percent of those usually employed full time were classified as working poor, compared with 15.1 percent of part-time workers.
- Blacks and Hispanics continued to be much more likely than Whites and Asians to be among the working poor.
- The likelihood of being classified as working poor greatly diminishes as workers attain higher levels of education. Among college graduates, 2.1 percent of those who were in the labor force for at least 27 weeks were classified as working poor, compared with 21.4 percent of those with less than a high school diploma.
- The likelihood of being among the working poor was lower for individuals employed in management, professional, and related occupations than for those employed in service jobs.
- Among families with at least one member in the labor force for 27 weeks or more, those families with children under 18 years old were about 4 times more likely than those without children to live in poverty.
- Women who maintain families were more likely than their male counterparts to be among the working poor.

¹See table 4 of *Income, Poverty, and Health Insurance Coverage in the United States: 2010*, Current Population Reports, pp. 60-239 (U.S. Census Bureau, September 2011), online at <http://www.census.gov/prod/2011pubs/p60-239.pdf>.

This report presents data on the relationship between labor force activity and poverty status in 2010 for workers and their families.

The specific income thresholds used to determine people's poverty status vary, depending on whether the individuals are living with family members or are living alone or with nonrelatives. For family members, the poverty threshold is determined by their family's total income; for individuals not living in families, their personal income is used as the determinant. Data were collected in the 2011 Annual Social and Economic Supplement to the Current Population Survey. (For a detailed description of the source of the data and an explanation of the concepts and definitions used in this report, see the technical note at the end of this report.)

Demographic characteristics

Among those who were in the labor force for 27 weeks or more in 2010, about the same number of men (5.3 million) and women (5.2 million) were classified as working poor. The working-poor rate, however, continued to be higher for women (7.6 percent) than for men (6.7 percent). The working-poor rates for both men and women were essentially unchanged from a year earlier. (See table 2.)

Hispanics and Blacks continued to be much more likely than Whites and Asians to be among the working poor. In 2010, 14.1 percent of Hispanics and 12.6 percent of Blacks were among the working poor, compared with 6.5 percent of Whites and 4.8 percent of Asians.

Table A. **Poverty status of persons and primary families in the labor force for 27 weeks or more, 2007-2010**
(Numbers in thousands)

Characteristic	2007	2008	2009	2010
Total persons ¹	146,567	147,838	147,902	146,859
In poverty	7,521	8,883	10,391	10,512
Working-poor rate	5.1	6.0	7.0	7.2
Unrelated individuals	33,226	32,785	33,798	34,099
In poverty	2,558	3,275	3,947	3,947
Working-poor rate	7.7	10.0	11.7	11.6
Primary families ²	65,158	65,907	65,467	64,931
In poverty	4,169	4,538	5,193	5,269
Working-poor rate	6.4	6.9	7.9	8.1

¹ Includes persons in families, not shown separately.

² Primary families with at least one member in the labor force for more than half the year.

NOTE: Updated population controls are introduced annually with the release of January data.

Chart. **Working-poor rate of persons in the labor force for 27 or more weeks, 1987–2010**

SOURCE: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement

White men and women who spent at least 27 weeks or more in the labor force were about equally likely in 2010 to be poor (6.4 percent and 6.6 percent, respectively). Among Hispanics, the rates for men (14.4 percent) and women (13.8 percent) also were about the same. In contrast, the working-poor rate for Black men (10.4 percent) was lower than the rate for Black women (14.5 percent).

Young workers are more vulnerable to poverty than are older age groups, in part because earnings are lower for young workers, and their unemployment rate is higher. In 2010, among youths who were in the labor force for 27 weeks or more, 14.4 percent of 16- to 19-year-olds and 15.5 percent of 20- to 24-year-olds were in poverty, about double the rate for workers age 35 to 44 (7.3 percent). Workers age 45 to 54 (4.9 percent), 55 to 64 (3.4 percent), and 65 and older (2.0 percent) had lower working-poor rates than did other age groups in 2010.

Educational attainment

Achieving higher levels of education greatly reduces the incidence of living in poverty. Individuals who complete more years of education have greater access to higher paying jobs—such as management, professional, and related occupations—than those with fewer years of education. Of all the people in the labor force for 27 weeks or more in 2010, those with less than a high school diploma had a higher working-poor rate (21.4 percent) than did high school graduates with no college (9.2 percent). Workers with

an associate's degree and those with a bachelor's degree or higher had the lowest working-poor rates: 4.5 percent and 2.1 percent, respectively. At nearly all levels of educational attainment, Blacks and Hispanics were more likely to be among the working poor, in 2010, than were Whites and Asians. (See table 3.)

At each educational level, working-poor rates were similar for White men and women. For example, 20.2 percent of White men with less than a high school diploma who spent at least half the year in the labor force were among the working poor, compared with 22.1 percent of their female counterparts. Among college graduates, the proportions classified as working poor were 2.0 percent and 1.9 percent for White men and White women, respectively. In contrast, Black men with less than a high school diploma were considerably less likely than their female counterparts to be among the working poor, 20.6 percent compared with 36.2 percent. Among Black men and women with a bachelor's degree or higher, the working-poor rate was about the same (3.6 percent and 3.1 percent, respectively). The working-poor rates of men and women of Hispanic or Latino ethnicity with less than a high school diploma were about the same—24.0 percent and 26.5 percent, respectively. The rates for Hispanic men and women with a bachelor's degree or higher also were similar, at 4.0 percent and 3.5 percent, respectively.

Occupation

The likelihood of being among the working poor varies widely

by occupation. Workers in occupations requiring higher education and characterized by relatively high earnings—such as management, professional, and related occupations—were less likely to be classified as working poor (2.4 percent) in 2010. In contrast, individuals employed in occupations that typically do not require high levels of education and that are characterized by relatively low earnings were more likely to be among the working poor. For example, 13.1 percent of service workers were classified as working poor in 2010. Indeed, service occupations, with 3.2 million working poor, accounted for nearly one-third of all those classified as working poor. Among those employed in natural resources, construction, and maintenance occupations, 10.6 percent of workers were classified as working poor. Within this occupation group, 19.5 percent of workers employed in farming, fishing, and forestry occupations and 12.8 percent of those in construction and extraction occupations were among the working poor. (See table 4.)

Families

In 2010, 5.3 million families were living below the poverty level, despite having at least one member in the labor force for half the year or more, little different than the 2009 figure. Among families with only one member in the labor force for at least 27 weeks in 2010, married-couple families had a lower likelihood of living below the poverty level (10.1 percent) than did families maintained by women (26.3 percent) or by men (15.6 percent)—a pattern that held, regardless of which member of the married-couple family was in the labor force. (See table 5.)

Families with children with at least one member in the labor force for half the year had greater odds of living below the poverty level than did those without children. The proportion of families with children age 18 years and younger that lived in poverty was 12.7 percent, in contrast to 2.8 percent for families without children. About 28.2 percent of families maintained by a woman with children under the age of 18 were in poverty. For such families maintained by men, the proportion in poverty also was relatively high, at 18.0 percent. Married-couple families with children had a working-poor rate of 7.3 percent in 2010.

Unrelated individuals

The “unrelated individuals” category includes individuals who live by themselves or with others not related to them. Of the 34.1 million unrelated individuals who were in the labor force for half the year or longer, 3.9 million lived below the poverty level in 2010. The working-poor rate for unrelated individuals was 11.6 percent. Both the working-poor level and rate were little different from a year earlier. (See table 6.)

Within the group of unrelated individuals, teenagers were the most likely to be among the working poor. In 2010, about half

(53.7 percent) of teens who were in the labor force for 27 weeks or more and who lived on their own or with others not related to them lived below the poverty level. Overall, the working-poor rates for women and men living alone or with unrelated individuals were 11.3 and 11.8 percent, respectively. The working-poor rates for unrelated individuals were much higher for Blacks (15.8 percent) and Hispanics (17.1 percent) than for Whites (11.0 percent) and Asians (9.3 percent). (See table 7.)

Of the 3.9 million unrelated individuals considered to be among the working poor in 2010, about two-thirds lived with others. These individuals had a working-poor rate of about twice that of individuals who lived alone. Many unrelated individuals living below the poverty level may live with others out of necessity. Conversely, many of those who live alone do so because they have sufficient income to support themselves. Unrelated individuals’ poverty status, however, is determined by each person’s resources. The pooling of resources and sharing of living expenses may permit some individuals in this category—who are technically classified as poor—to live at a higher standard than they would have if they lived alone.

Labor market problems

As noted earlier, workers who usually work full time are less likely to live in poverty than are others who do not work full time, yet there remains a sizable group of full-time workers who live below the poverty threshold. Among those who participated in the labor force for 27 weeks or more and usually worked in full-time wage and salary jobs, 4.1 million, or 3.8 percent, were classified as working poor in 2010, essentially unchanged from 2009. (See table 8.)

There are three major labor market problems that can hinder a worker’s ability to earn an income above the poverty threshold: low earnings, periods of unemployment, and involuntary part-time employment. (See the technical note for detailed definitions.)

In 2010, 84 percent of the working poor who usually worked full time experienced at least one of the major labor market problems. Low earnings continued to be the most common problem, with nearly two-thirds (63 percent) subject to low earnings, either alone or in combination with other labor market problems. About 42 percent experienced unemployment alone or in conjunction with other problems. Only 5 percent of the working poor experienced all three problems: low earnings, unemployment, and involuntary part-time employment.

Some 667,000, or 16 percent, of the working poor who usually worked full time did not experience any of the three primary labor market problems, in 2010. Their classification as working poor may be explained by other factors, including short-term employment, some weeks of voluntary part-time work, and a family structure that increases the risk of poverty.

Technical Note

Source of data

The data presented in this report were collected in the Annual Social and Economic Supplement (ASEC) of the Current Population Survey (CPS). The CPS, conducted by the U.S. Census Bureau for the Bureau of Labor Statistics, is a monthly sample survey of about 60,000 eligible households. Data from the CPS are used to obtain the monthly estimates of the nation's employment and unemployment levels. The Annual Social and Economic Supplement, conducted in the months of February through April, includes questions about work activity and income during the previous calendar year. For instance, data collected in 2011 refer to the 2010 calendar year.

Estimates in this report are based on a sample and, consequently, may differ from figures that would have been obtained from a complete count using the same questionnaire and procedures. Sampling variability may be relatively large in cases where the numbers are small. Thus, both small estimates and small differences between estimates should be interpreted with caution. For a detailed explanation of the Annual Social and Economic Supplement to the CPS, its sampling variability, and more extensive definitions than those provided in this technical note, see *Income, Poverty, and Health Insurance Coverage in the United States: 2010*, Current Population Reports, pp. 60-239 (U.S. Census Bureau, September 2011). This publication is available on the U.S. Census Bureau website at <http://www.census.gov/prod/2011pubs/p60-239.pdf>. Additional information about income and poverty measures is online at <http://www.census.gov/hhes/www/income/income.html>.

Information in this report will be made available to sensory-impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: 1 (800) 877-8339. This material is in the public domain and, with appropriate credit, may be reproduced without permission.

For more information on the data provided in this report, write to the U.S. Bureau of Labor Statistics, Division of Labor Force Statistics, 2 Massachusetts Avenue NE, Room 4675, Washington, DC 20212; email: cpsinfo@bls.gov; or telephone (202) 691-6378.

Comparability of estimates

The 2010 estimates in this report, which were collected in the 2011 Annual Social and Economic Supplement to the CPS, are not strictly comparable with data for 2009 and earlier years, because of the introduction in January 2011 of revised population controls used in the CPS. Additional information is online at <http://www.bls.gov/cps/documentation.htm#pop>.

Concepts and definitions

Poverty classification. Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by Federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families predicated on

the basis of factors such as family size and the number of children under 18 years of age.

The actual poverty thresholds vary with the makeup of the family. In 2010, the average poverty threshold for a family of four was \$22,314; for a family of nine or more persons, the threshold was \$45,220; and for an unrelated individual aged 65 years or older, it was \$10,458. Poverty thresholds are updated each year, to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). The thresholds do not vary geographically. (For more information, see *Income, Poverty, and Health Insurance Coverage in the United States: 2010*, online at <http://www.census.gov/prod/2011pubs/p60-239.pdf>.)

Low earnings. The low-earnings level, as first developed in 1987, represented the average of the real value of the minimum wage between 1967 and 1987 for a 40-hour workweek. The year 1967 was chosen as the base year, because that was the first year in which minimum-wage legislation covered essentially the same broad group of workers that currently is covered. The low-earnings level has been adjusted each year since then in accordance with the CPI-U, so the measure maintains the same real value that it held in 1987. In 2010, the low-earnings threshold was \$320.94 per week. For a more complete definition of the low-earnings threshold, see Bruce W. Klein and Philip L. Rones, "A profile of the working poor," *Monthly Labor Review*, October 1989, pp. 3-13, online at <http://www.bls.gov/opub/mlr/1989/10/art1full.pdf>.

Income. Data on income are limited to money income—before personal income taxes and payroll deductions—received in the calendar year preceding the CPS supplement. Data on income do not include the value of noncash benefits, such as food stamps, Medicare, Medicaid, public housing, and employer-provided benefits. For a complete definition of income, see *Income, Poverty, and Health Insurance Coverage in the United States: 2010*, online at <http://www.census.gov/prod/2011pubs/p60-239.pdf>.

Labor force. Persons in the labor force are those who worked or looked for work sometime during the calendar year. The number of weeks in the labor force is accumulated over the entire year. The focus in this report is on persons who were in the labor force for 27 weeks or more.

Involuntary part-time workers. These are persons who, during at least one week of the year, worked fewer than 35 hours, because of slack work or business conditions or because they could not find full-time work. The number of weeks of involuntary part-time work is accumulated over the year.

Occupation. This term refers to the occupation in which a person worked the most weeks during the calendar year.

Unemployed. Unemployed persons are those who looked for work while not employed or those who were on layoff from a

job and were expecting to be recalled to that job. The number of weeks unemployed is accumulated over the entire year.

Family. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption. The count of families used in this report includes only primary families. A primary family consists of the reference person (householder) and all people living in the household who are related to the reference person. Families are classified either as married-couple families or as those maintained by men or women without spouses present. Family status is determined at the time of the interview and, thus, may be different from that of the previous year.

Unrelated individuals. These are persons who are not living with any relatives. Such individuals may live alone, reside in a nonrelated family household, or live in group quarters with other unrelated individuals.

Related children. Related children are children (including sons,

daughters, and step- or adopted children) of the husband, wife, or person maintaining the family, as well as other children related to the householder by birth, marriage, or adoption.

Race. White, Black or African American, and Asian are categories used to describe the race of people in this report. People in these categories are those who selected that race group only. Data for the two remaining race categories—American Indian and Alaska Native and Native Hawaiian and Other Pacific Islander—and for people who selected more than one race category are included in totals, but are not shown separately, because the number of survey respondents is too small to develop estimates of sufficient quality for publication. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. Hispanic or Latino ethnicity is assigned to persons who identified themselves in the CPS enumeration process as being Spanish, Hispanic, or Latino. People whose ethnicity is identified as Hispanic or Latino may be of any race.

Table 1. People in the labor force: poverty status and work experience by weeks in the labor force, 2010

(Numbers in thousands)

Poverty status and work experience	Total in the labor force	27 or more weeks in the labor force	
		Total	50 to 52 weeks
Total			
Total in labor force	158,882	146,859	134,601
Did not work during the year	6,562	4,497	4,024
Worked during the year	152,320	142,362	130,577
Usual full-time workers	119,145	115,227	108,637
Usual part-time workers	33,175	27,135	21,940
Involuntary part-time workers	10,852	9,680	8,388
Voluntary part-time workers	22,323	17,455	13,552
At or above poverty level			
Total in labor force	145,964	136,348	125,589
Did not work during the year	4,289	2,918	2,612
Worked during the year	141,674	133,430	122,977
Usual full-time workers	113,625	110,399	104,397
Usual part-time workers	28,049	23,031	18,581
Involuntary part-time workers	8,189	7,328	6,364
Voluntary part-time workers	19,861	15,702	12,217
Below poverty level			
Total in labor force	12,919	10,512	9,012
Did not work during the year	2,272	1,580	1,412
Worked during the year	10,646	8,932	7,599
Usual full-time workers	5,520	4,829	4,240
Usual part-time workers	5,126	4,104	3,360
Involuntary part-time workers	2,664	2,351	2,024
Voluntary part-time workers	2,462	1,752	1,335
Rate¹			
Total in labor force	8.1	7.2	6.7
Did not work during the year	34.6	35.1	35.1
Worked during the year	7.0	6.3	5.8
Usual full-time workers	4.6	4.2	3.9
Usual part-time workers	15.5	15.1	15.3
Involuntary part-time workers	24.5	24.3	24.1
Voluntary part-time workers	11.0	10.0	9.9

¹ Number below the poverty level as a percent of the total in the labor force.

¹ Number below the poverty level as a percent of the total in the labor force for 27 or more weeks.

² Data not shown where base is less than 80,000.

NOTE: Estimates for the race groups shown (White, Black or

African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Dash represents or rounds to zero.

Table 7. **Unrelated individuals in the labor force for 27 or more weeks: poverty status by age, sex, race, Hispanic or Latino ethnicity, and living arrangement, 2010**

(Numbers in thousands)

Characteristic	Total	At or above poverty level	Below poverty level	Rate ¹
Age and sex				
Total unrelated individuals	34,099	30,152	3,947	11.6
16 to 19 years	318	148	171	53.7
20 to 24 years	4,193	3,111	1,081	25.8
25 to 64 years	27,659	25,030	2,629	9.5
65 years and older	1,929	1,863	66	3.4
Men	18,867	16,649	2,219	11.8
Women	15,232	13,503	1,728	11.3
Race and Hispanic or Latino ethnicity				
White	27,591	24,561	3,030	11.0
Men	15,446	13,755	1,692	11.0
Women	12,145	10,806	1,338	11.0
Black or African American	4,488	3,779	709	15.8
Men	2,338	1,904	434	18.6
Women	2,150	1,875	275	12.8
Asian	1,226	1,111	115	9.3
Men	649	600	49	7.5
Women	576	511	66	11.4
Hispanic or Latino ethnicity	4,167	3,456	711	17.1
Men	2,757	2,296	461	16.7
Women	1,410	1,160	249	17.7
Living arrangement				
Living alone	17,836	16,471	1,365	7.7
Living with others	16,263	13,681	2,582	15.9

¹ Number below the poverty level as a percent of the total in the labor force for 27 or more weeks.

NOTE: Estimates for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are

not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.
