COSTS AND RETURNS  
FOR FARM COST ACCOUNTS, 1961

For the Cost Account year 1961, there were 39 New York State farmers who completed detailed records on their businesses in co-operation with the Department of Agricultural Economics, Cornell University.

This report presents the results for individual enterprises and the averages of the costs and returns for all farms. This arrangement provides averages of costs and returns along with indications of the variability and reasons for it. The factors for individual enterprises are arranged according to size of enterprise. The averages of the costs are not averages of average costs but are weighted by the size of the enterprise.

The project was under the supervision of C. D. Kearl. The field work on these accounts was done by Robert Linton, James Q. Foster and C. D. Kearl. The closing of the books and the preparation of this report on results of the operation of the farms was done by the Cost Account staff consisting of Marjorie Evans, Oneta Shipe, Edith Slights, Edna Wheeler, Helen Kruth, Judith Caveney and Carol Petersen.

In 1961, New York farm prices declined while the prices of articles farmers buy went up. The decline in farm prices was almost 4 per cent; the increase in prices of articles farmers buy was about 1 per cent. The net effect was to make it more difficult than it has been for many years for farmers to realize a good living.

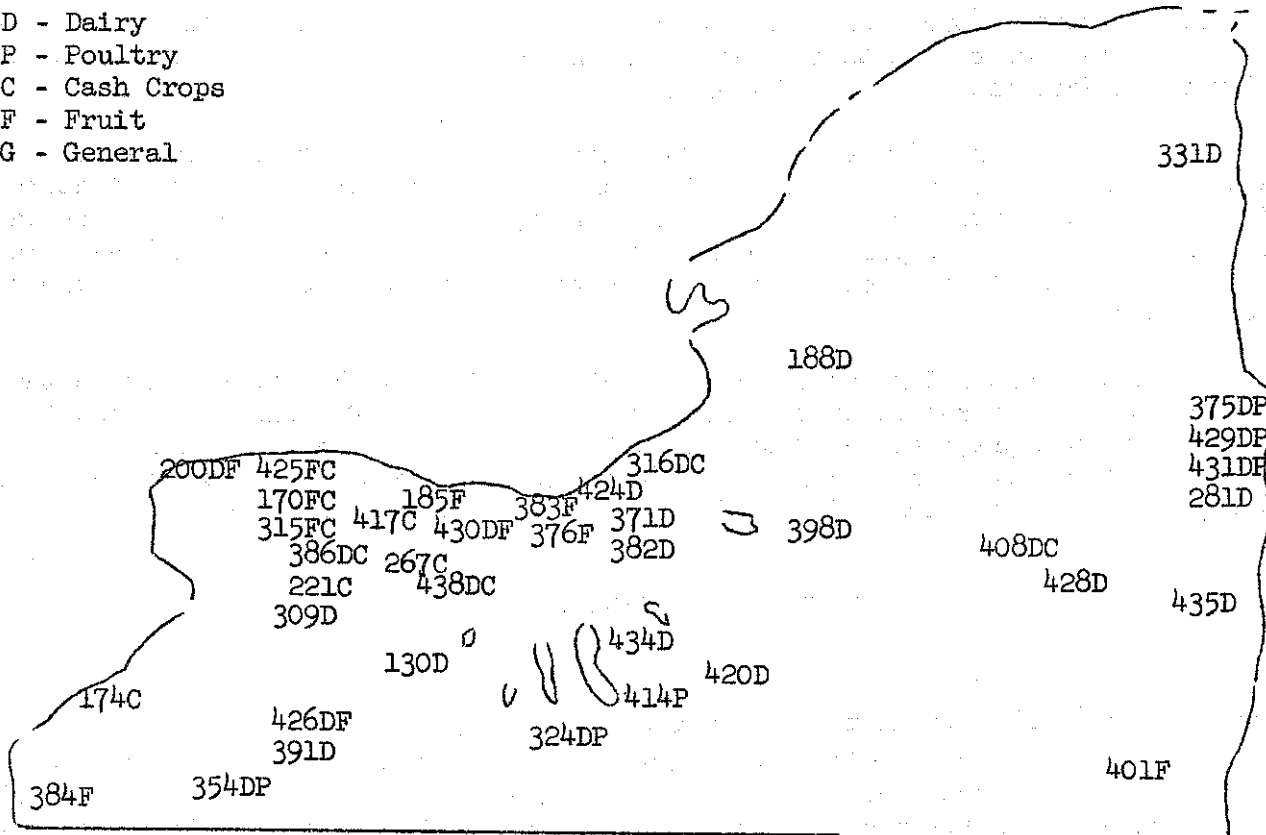

Some farmers have reduced their costs by expanding their businesses and spreading fixed costs over more units of produce. Others have effected savings by reducing expenditures. These farmers have maintained or even improved their profit situation.

At the same time farmers have been finding it more difficult to maintain their incomes, wages have gone up. Earnings of factory workers in 1961 were up 22 index points over the 1960 level. This is an increase of 2.8 per cent.

## LOCATION OF FARMS

Legend

- D - Dairy
- P - Poultry
- C - Cash Crops
- F - Fruit
- G - General

Cost Account farms are located in most of the farming areas of the State. They are generally well-run, full-time commercial farm businesses. They are representative of the "better" farmers of New York.

Although space on the map does not allow the numbers to be put in the exact location of the farm, they do indicate the general area in which the farm is situated.

The type of farm is indicated by the letters which follow the farm number. The combinations of letters indicate that there was more than one type of major enterprise on the farm. General type farms include those with a number of different types of enterprises, none of which is important enough to warrant classifying the farm by a type of enterprise.

\*\* Number of days between last and first frost

The rainfall in New York State in 1961 was below normal for the year. During the early part of the growing season it was variable from place to place, being above normal at some stations and below at others. During the latter part of the summer--August, September and October--it was below normal. Temperatures early in the growing season tended to be below normal. The fall months had higher than normal temperatures. The growing season was about twenty days shorter.
